The occurrence of two Jewish holidays, Monday and Tuesday, had the immediate effect of putting a check on butter trading and causing very slight price declines, but the depression was only temporary and trading during the week ending September 18 showed no great change from the previous week. The release of the American Warehousemen's Association report of September 1, which showed an apparent rapid cutting down of the shortage in cold storage holdings as compared with a year ago, served early in the week to make operators very cautious about buying, especially in view of the light exports of butter from this country this year. However, a correction of the figures given in this report and the release later in the week of the Bureau of Markets' report, covering all storages in the United States, served to restore confidence.

According to the bureau report, holdings for the entire country were lighter on September 1 than had been generally expected. It is reported commercially that England is short of her requirements of butter and may well come into our markets for a further supply before the season is over. Of course, such action is largely dependent upon the position of exchange rates, prices here, availability of butter from other sources, etc. If no exporting is done, and if no further importations are received, our storage holdings are likely to work out all right and the market to hold steady, as consumption continues excellent. Some Danish storage butter was used during the week at New York, most of it going into prints and at prices about 3 to 5 cents below prices of domestic fresh butter. No further purchases of new stocks of foreign butter are reported.

The average wholesale prices on 92-score butter at five of the principal markets for the week ending September 18, were as follows: New York, 58.75 cents; Chicago, 56.14 cents; Philadelphia, 59.29 cents; Boston, 59.08 cents; and San Francisco, 65 cents. For the corresponding week last year the average prices at these markets were: 58.4c, 55.8c, 58.5c, 57.9c, and 60.7c, respectively. The receipts of butter at these five markets were 10,378,735 lbs. as compared with 9,886,409 lbs. for the corresponding week last year and 9,646,226 lbs. for last week.

Export Demand Expected by Cheese Trade

First Orders Already Placed—Closing of Condenseries Will Aid Production

[Report by U. S. Bureau of Markets.]

Little of unusual interest developed in the cheese markets during the week ending September 18. Markets generally retained a firm tone, and while trading was not on a real active basis, both buyers and sellers seemed to have confidence in the situation. The week opened with prices at Wisconsin primary markets showing a slight advance, which was in most cases maintained. Twins alone declined. On Longhorns the advances amounted to an average of three-fourths cent.

Receipts at the four principal eastern markets are holding up fairly well for this time of year, although considerably lighter than a year ago. At New York current receipts are especially light partly on account of the fact that the usual amount of cheese has not been made in New York State. Furthermore, just at present very little cheese is reaching that market from Wisconsin on account of prices. According to reports, the unfavorable condition of the condensed milk market will probably cause more milk to be diverted to cheese, and will have a tendency to reduce the local shortage at New York where much of this cheese will doubtless be marketed.

A further hopeful sign is the export demand. More trial shipments have been made, and during the week several good-sized orders from Continental Europe materialized mostly for Canadian Cheddars, but including some Wisconsin Twins. More business of this nature is anticipated; in fact, dealers are not pushing sales vigorously at present, as further price advances are expected on practically all styles.

Storage Stocks Reach High Point

The monthly cold storage report released by the Bureau of Markets shows that total storage holdings on September 1 were 60,530,000 pounds. This total is 16,000,000 pounds short of last year, but is only 6,600,000 pounds under the five-year average for September 1. This report indicates also that there was an increase of some 9,000,000 pounds during August this year. Holdings in the four large distributing markets showed a steady increase up to September 1, but that date seems to have marked the high point thus far this season in those markets, as during the first half of September, storage stocks decreased approximately 5 per cent. During the same period last year holdings were increased 10 per cent. Storage reduction this year may have been caused by the increased cost of cheese due to higher prices at primary markets and the increased freight rates, which make it more profitable for dealers to move stocks held in storage than to purchase new stock for filling current orders. These conditions may possibly be only temporary.

The average wholesale prices at the principal markets on American cheese, style Twins, for the week ending September 18, were as follows: New York, 27.65 cents; Chicago, 26.25 cents; Boston, 28.94 cents; San Francisco; 30.5 cents; and the Wisconsin primary markets, 26.16 cents. For the corresponding week last year the average prices at these markets were: 30.5c, 28.3c, 31.8c, 33.8c, and 27.7c, respectively. The receipts of cheese at these five markets were 2,877,590 lbs. as compared with 4,518,190 lbs. for the corresponding week last year and 2,664,990 lbs. for last week.

Current Feed and Hay Prices

[From Reports by U. S. Bureau of Markets.]

A general decline in the prices of all feeds continued during the week ending September 18. Railroad conditions are much improved and movement of cars from Minnesota to eastern points is said to compare favorably with the best of former years. For the first time in years some of the trunk lines are now soliciting business.

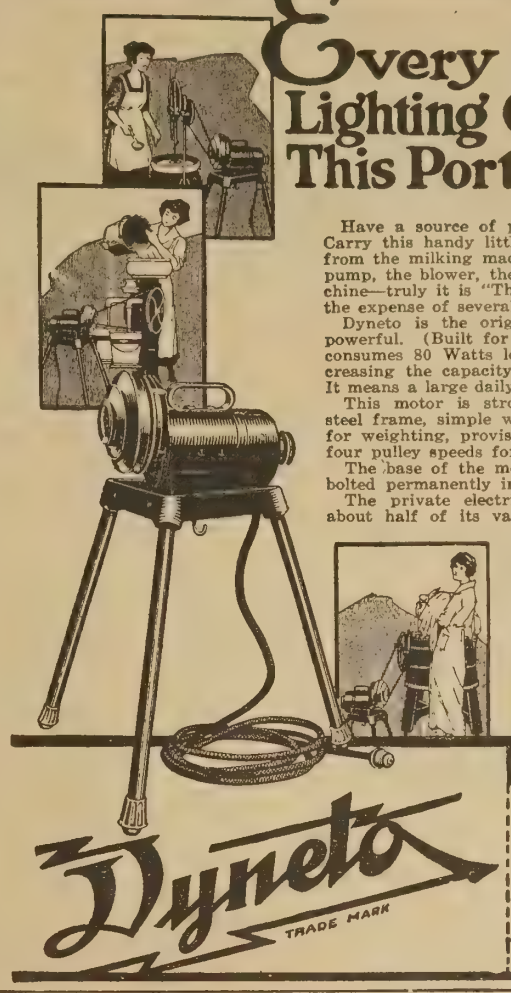
The wheat mill feed market remains dull, with current trade and future booking light. At Minneapolis bran is quoted at $38 and middlings at $46. Bran averaged $38 at Kansas City, $42 at Chicago, $49 at New York and Boston, and $52 at Los Angeles.

Cottonseed meal is also dull. Forty-one per cent is quoted at $55 in Kansis City, $62 in Minneapolis, $61 in Chicago, $64 in Boston, and $60 in New York. Thirty-six per cent sold at $51 at Memphis and Atlanta, with an average of $59 at other markets. Texas quotes 41 per cent meal at $48.50, which means $61 delivered at Chicago.

At Minneapolis prices on linseed meal hold firm at $63, while the tendency is for lower prices at the Atlantic sea board. Quotation range: $60 at New York, $63 at Boston, $66 at Chicago, and $70 at Omaha.

Because of the guaranteed price of gluten feed the market remained unchanged, with $60 at Cincinnati, $61 at Buffalo, and $59 at Chicago. Alfalfa meal is quoted at $34 in Kansas City and $37 in Chicago. At Chicago jobbers report sacked hominy feed for October delivery at $51, while brokers state that mills are anxious to sell at $49.75. Beet pulp ranges from $52 at Los Angeles to $55 at Minneapolis and $63 at Boston.

Timothy hay has averaged $35 for several weeks, which is about $4 higher than a year ago. Lack of demand and the poor quality of hay arriving is depressing the market. Quotations on No. 1 timothy are: $27.25 at Kansas City, $27 at Minneapolis, $32 at Chicago, $41 at Boston, and $49 at New York. Mixed clover and timothy, as also clear clover, rules about $4 under these prices.



Prices of alfalfa have declined $1 to $2 during the week. At Seattle it is quoted at $24 and in the Yakima Valley at $19. No. 1 alfalfa is priced at $28 in Kansas City, $25 in Omaha, $28 in Minneapolis, $33 in Chicago, $33 in Memphis, and $40 in Atlanta.

Illinois Condenseries Close

Newspaper reports of September 24 state that orders have been received by the managers of plants of the Borden Company, milk condensers, to buy no milk after Sept. 30 until further orders. The result will be, it is stated, the closing of the plants at Belvidere, St. Charles, and Grangeville, Ill., and Orfordville and Monticello, Wis. On Sept. 1 a price of $3.70 per 100 pounds was posted. This was reduced to $3.35 on Sept. 15. A surplus of canned milk is given as the reason for the order to cease buying.

"They only live who dare."

One Dyneto Portable Utility Motor Instead of two or more Stationary Motors

Every Farm Lighting Outfit Needs This Portable Motor

Have a source of power for the ever-present odd job. Carry this handy little motor on its strong, rigid tripod from the milking machine to the cream separator, to the pump, the blower, the washer, the churn, the sewing machine—truly it is "The Motor of a Thousand Uses". Save the expense of several motors attached to machines.

Dyneto is the original Utility Motor—light, yet very powerful. (Built for 32-Volt farm lighting circuits.) It consumes 80 Watts less current—this is the same as increasing the capacity of the storage battery 10 to 25%. It means a large daily saving in fuel.

This motor is strong, sturdy and convenient—drawn steel frame, simple wiring, ball bearings. Note the hook for weighting, provision for bracing and 20 ft. cord and four pulley speeds for round and flat belts.

The base of the motor is slotted so that motor can be bolted permanently in one place if desired.

The private electric lighting plant is only giving about half of its value in the way of service unless a Dyneto Utility Motor is used. Lighten the woman's work in the house as well as the man's work on the farm.

The Titus Loan and Investment Company's Farm near Muscatine, Iowa—where a Milwaukee Air Power System was installed by Wirtz & Schmer, Expert Dealers!

"Greatly Pleased,"
is what they're *all* saying—
on the Small Farms and the Large

Titus Loan and Investment Company.
INCORPORATED
ESTABLISHED 1877
Muscatine, Iowa. June 22nd, 1920

Wirtz & Schmer,
City.

Gentlemen:

We are greatly pleased with the Milwaukee Air Pump water system that you installed on our farm in Lake Township. You are at liberty to show the plant to prospective customers, and we shall certainly be willing at all times to answer any inquiries made by interested parties.

Very truly yours,
TITUS LOAN & INVESTMENT CO.,
By _____ Pres.

OMT/WS

Milwaukee Air Power Water and Light Systems are found in about equal proportion on the large and on the smaller farms. The reason is plain—

Milwaukee Systems appeal universally because they are simple, efficient, economical; and they store no water, but bring it "direct from the well"—always fresh; their price is moderate enough to place them within common reach.

And they are "*flexible*" systems. They adapt themselves to all conditions, for the service of the whole farm or any part.

N. Y. Farmer — Business Conference

(Continued from page 424)

fore necessary that we have agricultural organization. Agriculture must be prosperous enough to insure its perpetuity. The problem is too big for farmers alone to handle. It is a question of distribution quite largely. The spread between the producer and consumer is so great that agriculture is being irreparably harmed.

⚜

A shipper spoke of the difficulties of getting quick service in transportation. It is wrong to put a car of apples or of potatoes between a car of lumber ahead and a car of iron after and send the whole by slow freight. It ties up cars unnecessarily and there is loss of the commodity by delay. There should be a fast freight service of shorter trains for these and similar commodities.

⚜

Mr. Evans, of the New York Central R. R., stated some of the difficulties that the railroads have. Cars are not in full supply. Usually 1,500 or 2,000 or more cars are held in reserve for western New York but now there are much fewer. For all that it is likely that it will be possible to move the crops. Cars of the different roads have been pooled and the car service bureau takes them over and supplies cars as needed, no matter to which road they may belong. And a gentleman representing the Pennsylvania railroad, corroborated the statements. The production of the various sections is determined and the car service is to meet the needs. The company also tries to determine the markets and advise in making sales. There is little doubt but that cars will be furnished upon short notice for moving all commodities, according to these men. Several men, representing various roads, including the Erie, the Lackawanna, etc., spoke and gave assurance of their desire to assist, but I failed to note a large amount of certainty that cars can be always ready. Yet the statements were encouraging.

⚜

The barge canal has cost New York State people $150,000,000. Today there are less boats on the canal than there were on the old Erie canal. There may be a total of three hundred boats now. The boats make a trip from New York to Buffalo in six days. Breakage is largely eliminated. A 600-ton barge is about as large as can be operated well. Most of the boats have a capacity of half that or a little more. The boats are now operated at a fair profit. There is room for many more boats. The speaker does not see more boats coming quickly. The canal, according to general opinion on our farms, is a bill of expense to taxpayers and is of small use. The speaker hardly made a different situation apparent, but looks for something better later on.

⚜

Mr. Strivings has been traveling and speaking in the West in the interests of the farm bureau movement. He finds that westerners are becoming greatly interested in the outlet to the ocean by the Erie canal or otherwise. Some cheaper means of transit is needed. The subject was not further discussed at the meeting. It would almost seem that the state generally feels that the immense sum already paid is as much as we can afford and that further expenditure needs to be more from those who secure the benefits. This was not stated at the conference.

National Milk Producers' Federation

The attacks that have been launched against the Oregon Dairymen's Co-operative League, Inc., by the Advertising Committee of the Portland milk dealers is in the main the same as those made in previous years against most of the older producers' co-operative milk marketing associations in other sections of the United States. The nature of charges made are practically the same as those made against the New York Dairymen's League, Inc., and the Chicago Milk Producers' Association, when those organizations first began to function during the years 1916 and 1917.

Instead of succeeding in disrupting those producers' associations, however, the attacks of the milk dealers in New York and Chicago only serve to strengthen them. Today, the Producers' Co-operative Marketing Company, supplying the major portion of Chicago's market milk demands, is selling the milk of approximately 20,000 dairymen whose natural market outlet is Chicago or the condenseries, cheese factories, and creameries in the territory easily accessible to that city. The Dairymen's League of New York has now a membership of approximately 84,000 farmers, located throughout the territory that constitutes the natural source of the milk supply of metropolitan New York, Buffalo, Rochester, Utica, Albany, Newark, Patterson, and Wilkes-Barre.

Portland Prices Comparatively Low

The prices that have been paid during the recent months to producers supplying the Portland market are considerably lower than those prevailing in most of the important market centers of the United States. The Fluid Milk Market report issued monthly by the United States Bureau of Markets shows that, during May, June, and July, 1920, the prices for the standard grade of market milk testing 3.5% butterfat, delivered f. o. b. Portland, have been from 35 to 54 cents per hundredweight less than the average net prices received by producers generally in the Pacific Coast States for the same grade of milk delivered at local shipping points or at dealers' country stations.

G. P. WARBER, Manager.
The Nat'l Milk Producers' Federation.

The Finest Story Ever Written *for* Farmers - Free

Have You Received Your Copy Yet?

ARE you interested in better living—more comfort and leisure, less labor?

Then you must have this book. You have never read anything like it. You will never put it down until you have read the last word of it.

More interesting than many a novel, especially to women, it tells how city comforts have come to the farm; how every dark corner has been brightened, how the burden of toil has been lifted from women's shoulders, and sons and daughters made more contented.

Reading this book, a farmer sees *his* home transformed into a city dwelling; his wife happier with less toil and more comfort; his children with a new satisfaction in the farm.

Inspired by the message of this book, thousands of farmers have brought electricity to their farms, and year 'round contentment and happiness with it.

You can read this same book with its wonderful message. You will enjoy this romantic tale of how greater happiness and comfort have come to the farm. Send for it now, while copies are still available, free.

Best 4 females 2 years or over, bred by exhibitor—1, Stewart.

Senior and Grand Champion Bull—Auchenbrain Toreador. Junior Champion Bull—Cavalier's Model Champion. Senior and Grand Champion Cow—Henderson's Betty. Junior and Grand Champion Cow—Lippett Lady Stuart.

Jerseys

One hundred and one Jerseys put up a quality show in every class. No other state fair reported in Hoard's Dairyman this year has furnished an equal. In size and merit it lead the breeds, the Ayrshire being the only one of comparable show ring fitness. Five farms divided the first prizes and three the championships. J. C. McNutt made the awards.

Inderkill Farms, New York, acquired the highest award for males with Gamboge's Royal Majesty. The strongest contender was A. V. Barnes' junior champion, Fauvic's Western King, a yearling which bids fair to equal his famous sire, Fauvic's Prince, when he has matured. H. M. Kinne made but one entry, a bull calf, but he brought enough quality with him to win the blue in his class. P. H. B. Frelinghuysen of Virginia won the two-year-olds with Fern's Noble Oxford Sultan.

Nesta's Lass maintained her record of winning by bringing the blue in the aged cow class to the Virginia herd but she lost in the championships to the Barnes entry, Fauvic's Nic Nac. This three-year-old was easily the best thing in the show, and there were many good ones. Beginning at twenty-four months she made 500.18 lbs. of fat in a year. Her udder is near perfect and her style and strong lines make her the best three-year-old on the circuit thus far. Barnes had the winnings his way in the next three classes of females with Prospect Farms of New Jersey taking the firsts in the two calf classes and winning the junior championship on Prospect's Fairy Glenn.

The awards by classes follow:

Bull 3 years or over—1, Inderkill Farms on Gamboge's Royal Majesty; 2, Cowden on King Aire of Elm Place; 3, Mansfield Hall Farm on Mansfield Squire Blossom; 4, Woodburn Hall Farm on Frederick Duke. Bull 2 years and under 3—1, Frelinghuysen on Fern's Noble Oxford Sultan; 2, Prospect Farms on Hauterville's Fountaine; 3, Roberts on Majesty's Aire of Elm Place; 4, Cowden on Rosaire of Elm Place. Bull 1 year and under 2—1, Barnes on Fauvic's Western King; 2, Cowden on Majesty's Prince of Elm Place; 3, Frelinghuysen on Dairylike Fern's Financier; 4, Mansfield Hall on Marjorie Double Finance. Bull 2 months and under 12—1, Kinne on Raleigh's Fairy Knight; 2, Roberts on Selma's Abe; 3, Inderkill Farms on Sybills Beans Count; 4, Frelinghuysen on Princess Golden Fern.

Cow 4 years or over—1, Frelinghuysen on Nesta's Lass; 2 and 4, Inderkill Farms on Heather Countess and Tiddledywink's Stella; 3, Barnes on Fauvic's Duchess. Cow 3 years and under 4—1, Barnes on Fauvic's Nic Nac; 2, Inderkill on Golden Lustre; 3, Frelinghuysen on Oxford Pretty Maid; 4, Arlington Farms on Bunbury's Oxford Duchess. Cow 2 years and under 3—1, Barnes on Combination's Bright Baby; 2, Inderkill on Oxford Majestic Beauty 2nd; 3, Mansfield Hall on Dominco Finance; 4, Frelinghuysen on Netina's Golden Maid. Heifer 18 months and under 2 years—1 and 2, Barnes on Oxford Nic Nac and Fauvic's Gipsy Maid; 3, Mansfield Hall on Finance Double Cream; 4, Prospect Farms on Fairy Glen's Cherita. Heifer 12 months and under 18—1, Barnes on Fauvic's Cherry; 2 and 3, Inderkill Farms on Lucinda's Princess Matilda and Miss Warder's Sybil; 4, Roberts on Jennie's Amelia Stoke. Heifer 6 months and under 12—1 and 2, Prospect Farms on Majesty's Miss Daisy and ——; 3 and 4, Frelinghuysen on Ruby's Golden Maid and The Cid's Sea Lass. Heifer under 6 months—1, Prospect Farms on Prospect Fairy Glenn; 2, Inderkill on Dairylike's Pretty Princess; 3, Mansfield Hall on Double Finance Snowdrop; 4, Barnes on Fauvic's Ivy.

Exhibitor's Herd—1, Barnes; 2, Inderkill; 3, Frelinghuysen; 4, Mansfield Hall. Breeder's Young Herd—1, Barnes; 2, Mansfield Hall; 3, Cowden. Calf Herd—1, Frelinghuysen; 2, Barnes; 3, Mansfield Hall; 4, Inderkill. Get of Sire—1, Barnes; 2, Mansfield Hall; 3, Inderkill; 4, Cowden. Produce of Cow—1, Barnes; 2 and 4, Cowden; 3, Frelinghuysen. Best 4 cows over 3 years—1, Barnes; 2, Inderkill; 3, Frelinghuysen; 4, Arlington.

Senior and Grand Champion Bull—Gamboges Royal Majesty. Junior Champion Bull—Fauvic's Western King. Senior and Grand Champion Cow—Fauvic's Nic Nac. Junior Champion Cow—Prospect Fairy Glenn.

Guernseys

The Guernsey showing did not well represent the quality of the breed in New York State. The interest of breeders was centered in a state consignment sale held September 18 rather than in exhibiting. A total of seventy-nine were shown. V. A. Woodbury II of Vermont brought in the only out of state entries and won twelve firsts and five championships, losing only three firsts and female junior champion to Emmadine Farms, two firsts to Fralick and Smith, and one first to T. H. Munro. A number of entries were seen which should not have left pasture.

John Clark of Mixter Farms, Massachusetts, did pleasing work in tying the ribbons.

Pencoyd Secret Marose won the purple among the males for the Vermont herd. He shows as a three-year-old and is inferior to Inspector of Indian Bridge, Emmadine Farms' older sire, in scale, capacity, and in clean cutness in his rear quarters. He is better over the shoulders and has more style in the ring. The two were close. Deanie's Marose, junior champion, gave his senior close competition for the grand.

The aged cow class was disappointing but the three-year-olds brought out a cow of choice type and production form in Duchess of Prospect. She was a worthy grand champion. Her chief contest came against the junior champion, Emmadine Adah, a pleasing junior calf of good promise.

The placings by classes follow:

Bull 3 years or over—1, Woodbury on Pencoyd's Secret Marose; 2, Emmadine Farms on Inspector of Indian Bridge; 3, Kelley on Paddy McCue of Maple Glen; 4, Fralick and Smith on ——. Bull 2 years and under 3—1, Woodbury on Rose's Golden Cherub; 2, Stebbins on Coralie's Wilma Boy; 3, Duguld on Langwater Trogan. Bull 1 year and under 2—1 and 3, Emmadine Farms on Emmadine's May King and Gay Lad of Emmadine; 2, Woodbury on Cherub's Popeep Prince of Appletree Point; 4, Fralick and Smith. Bull 2 months and under 12—1, Woodbury on Deanie's Marose of Appletree Point; 2, Duguid on Sunny Hill Pioneer; 3, Emmadine Farms on Emmadine King; 4, Syracuse University.

Cow 4 years or over—1 and 4, Woodbury on Follyland Rose Queen and Morning Glory of Appletree Point; 2, Fralick & Smith; 3, Kelly. Cow 3 years and under 4—1, Woodbury on Duchess of Prospect; 2, Kelly on Louise of Springwater; 3 and 4, Munro on Louise of Munroholm and May Queen of Munroholm. Cow 2 years and under 3—1, Fralick & Smith; 2, Woodbury on Justice's Early Rose of Appletree Point. Heifer 18 months and under 2 years—1, Woodbury on Flora of Buena Vista Farm; 2, Kelly on Padde's Lawn of Seneca River; 3, Dixon & Son on Aleta of Valley View; 4, Fralich & Smith. Heifer 12 months and under 18—1 and 4, Woodbury on Golden Secret's Polly of Appletree Point and Nancy's Betsey of Bellview; 2 and 3, Emmadine Farms on Emmadine Laura Belle and Masher's Gladys of Emmadine. Heifer 6 months and under 12—1, Woodbury on Golden Secret's Duchess of Appletree Point; 2, Fralick & Smith; 3 and 4, Emmadine Farms on Emmadine Gladys and Emmadine Buttercup. Heifer under 6 months—1, 3, and 4, Emmadine Farms on Emmadine Adah, Emmadine Mary Ann, and Emmadine Daisy; 2, Woodbury on Appletree Point's Aimable.

Exhibitor's Herd—1, Woodbury; 2, Kelly; 3, Fralick & Smith. Breeders' Young Herd—1, Emmadine; 2, Fralick & Smith; 3, Munro. Calf Herd—1, Woodbury; 2, Emmadine; 3, Fralick & Smith; 4, Munro. Get of Sire—1 and 3, Woodbury; 2 and 4, Emmadine. Produce of Cow—1, Munro; 2, Emmadine; 3, Woodbury; 4, Kelly. Best 4 cows over 3 years—1, Woodbury; 2, Fralick & Smith. Best 4 females, 2 years or over—1, Fralick & Smith.

Senior and Grand Champion Bull—Pencoyd's Secret Marose. Junior Champion Bull—Deanie's Marose of Appletree Point. Senior and Grand Champion Cow—Imp. Duchess of Prospect. Junior Champion Cow—Emmadine Adah.

Brown Swiss

Three breeders of Brown Swiss, Hull Bros. of Ohio and Forest Farms and Albert E. Dean of New York, put on a first class exhibition for the breed. The Ohio herd won the bulk of the blues, having thirteen of the sixteen awarded, and the six purples but had very worthy competition. Bob Haeger tied the ribbons.

Vogel's College Boy led the males. His handling quality and dairy form, with his scale, gave him favor over Forest Farms' Roman, a younger bull which will improve as he fills out. Gold King, a calf, was junior champion. The aged cow class pleased the ringside. Eleven milky matrons gave telling evidence of the producing qualities of the breed. Swiss Valley Girl 9th won over her older sister, Swiss Valley Girl 7th, in a close decision. She lacks the older cow's development but was given preference in udder, style, and top. Breithorn, Forest Farms' three-year-old, and the two-year-old,

A 25 to 50 bushels per hour GRIST MILL right on your own farm. NO BELT TO BUY. Connected in less than ONE MINUTE to practically any make car. GRINDS CORN ON COB as well as all small grain.

FOR SALE

20 to 25 head of Registered Holstein cows from 4 to 8 years old, mostly close up springers, in calf to Sir Rag Apple Korndyke Hengerveld, a 39.283-lb. grandson of Pontiac Korndyke (whose two-year-old heifers are making mighty good records). Several of these cows have good A. R. O. records. We are selling to make room for our heifers that we expect to test this winter.

Patterson & Dickinson, R. R. 6, Bellefontaine, Ohio

West Michigan's Great Sale of 114 Registered Holsteins 114

West Michigan State Fair Grounds

Grand Rapids, Mich. - October 18

A splendid lot of carefully selected cattle to choose from, where the buyer can select anything he wants from a choice heifer calf to an unusually good 32-lb. YOUNG HERD SIRE.

Among our offerings will be about a carload of very desirable yearlings and two-year-old heifers from the noted Traverse City State Hospital Herd. Most of these Traverse City heifers are safe in calf to an $8,000 Grandson of MAY ECHO SYLVIA.

H. A. Washburn will disperse his entire Government and State Accredited Herd of 25 head of cattle, including a 29-lb. cow and her 6-month-old bull calf.

Monroe & Lewis will also disperse their entire Government and State Accredited herd of 15 good females including two splendid daughters of a 28-lb. cow.

Clarence Bisbee will disperse his little herd of five females, including a 29-lb. daughter of a 34-lb. sire, and a 24-lb. daughter of a 30-lb. cow safe in calf to a 33-lb. bull.

We will also have a carload or two of good fresh milch cows of good type, and a carload of springers due to freshen in November and December.

We will offer a carload or more of good cows due to freshen during the winter or early spring; also about a carload of good yearling heifers, and a carload of choice heifer calves. These yearling heifers and heifer calves are good individuals; most of them are out of high record sires and a number of them are from good A. R. O. dams.

There will be two 29-lb. cows in the sale, a 25-lb. cow, a 24-lb. daughter of a 30-lb. cow and other good A. R. O. cows that space does not permit us to mention.

The 32-lb. bull calf is sired by a 30-lb. son of King of the Pontiacs and is one of the best young bulls ever offered in a Michigan sale ring. We also have a 31-lb. 2-year-old bull in the sale, two desirable 29-lb. bull calves, a splendid yearling bull out of a 26.88-lb. cow and a 31-lb. sire and several other good bull calves out of high-class sires and good A. R. O. dams.

Nearly all the cattle in the West Michigan Sale at Grand Rapids come from herds that are tuberculin tested regularly under the Government and State Accredited Herd plan, and a number of these herds are "Fully Accredited".

Sale Catalogs out October 1st.

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

For Pig Club Juniors

It may seem to many of you juniors that an article of this kind is a little out of place at this time of the year since so many of the fairs are over with. But since some of the big shows will come later on, even running well into the winter months, we think it is important for those juniors who are interested in hogs to know some of the points that are necessary to fit a hog for the show ring.

First of all, we will assume that pig club juniors are interested only in pure-bred pigs of good family breeding or in well bred grades. Now, if you have a pig which is of good breeding and shows good type, there are still many things which you will want to consider to make him show off to the best advantage before the eyes of the judge. Exhibitors who pay attention to these things are usually the ones who are awarded with at least a fair portion of the prizes offered.

A glossy coat of hair, we have learned, adds to the general appearance and neatness of calves and it makes their qualities stand out much more prominently. We usually refer to the hair of a pig as bristles. I think this is entirely out of place and we should expect that well bred hogs should have a good coat of hair and not the coarse bristles which the old razor back type of hog has. A pig well fitted for the show ring will show a glossy coat of hair. Some show it more than others but it is a pretty safe guess that a little attention given to this matter will produce good results. It is known that a small amount of linseed oil meal added to the ration during the month or six weeks previous to showing will make the hair more silky. The amount of linseed meal may not be large, either. You would be safe in using about one-half pound of linseed meal per day for each one hundred pounds of live weight. This should be sufficient and a little less might suffice. But this is only one thing to do and perhaps it is too late for you to do this before showing your pig. It will be well to give him a thorough washing and brushing with a coarse brush before taking him to the show. Do not be afraid to use plenty of soapy, warm water to remove stains of all kinds and this is especially true if you have a white breed. After they are thoroughly dried a little oil on a woolen cloth well rubbed into the hair gives it a more glossy appearance. If you neglect to do this, no matter how good type your pig shows, he still may look a little rough and coarse and the judge notices all of these things.

Another thing that needs attention are the hoofs. These should be closely watched and if you find that they have tended to grow too long or that they are ill proportioned they may be remedied by trimming away all of the objectionable parts. Any roughness which comes as a result of trimming may be smoothed down with a file and finished off nicely with a fine grade of sand paper or emery cloth. You may say that, why be so particular about the hoofs—that the judge does not see them anyway. If you have an opportunity to ask a good judge what he thinks about fitting a hog for the show ring, he will be sure to tell you that the hoof should be looked after carefully.

Then, the ears should receive some attention. Sometimes they are covered with a growth of coarse hair on the inside. The appearance of the head can be improved a great deal if these coarse hairs are removed. This may be done with clippers or shears and don't forget when you are washing Mr. Pig to give the inside of his ears a little attention, also. Remove all the dirt that you possibly can.

We should also take it for granted that no pig will be exhibited that is not free from lice, but experience has taught us that this is not always the case. There is no excuse for pigs having lice especially those which we intend to show. Crude oil is a very satisfactory remedy for killing lice and besides it has a beneficial effect on the coat of hair. It may be applied in many ways but we think that an ordinary coarse brush will rub it in about as well as anything.

Is your pig a trained pig? By this we mean, is he one that is easily driven and easily controlled without an undue amount of excitement resulting? The training which a pig should have for a show ring should have been going on all through the summer months. It is pretty late in the day now to give that feature much attention but judges do not like to judge pigs that are wild and unruly in the ring.

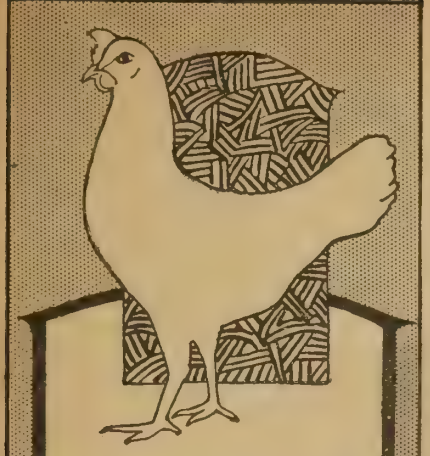
CHAMPION DUROC-JERSEY PIG IN BOYS' AND GIRLS' CLUB EXHIBIT AT OHIO STATE FAIR
OWNED BY HARROLD ELLIOTT, OHIO

The Pig in the Show Ring

Did you ever watch a good judge at work in the ring with all the animals in a class before him? If he is a well seasoned judge, he stands back ten or fifteen feet from the animals and looks them over in a general way for the points that go to make up their general appearance, breed type, and quality. This is a very important point with a good judge for it gives him a general impression of the class as a whole and at the same time if the class is large, a number of the animals will be eliminated in this first stage of judging because he is able to see that they cannot compete with the better ones which are always bound to be on hand. This leaves only the best pigs for him to judge and by moving them about so that the better ones are near each other, he will be able to eliminate others.

We sometimes wonder what the judge is thinking about and what he is looking for as he looks over each class. To many people, a pig is a pig and to them all pigs look alike. But to experienced juniors the matter is entirely different, because we all know that pigs from the same litter are very different many times in both size and conformation. The judge looks for a wide back and a loin which shows a good spring of rib and he looks for a wide chest girth between the front legs. He also notices the width and length of the head and looks for good width between the eyes. A long, strong, and well arched back that blends uniformly into a long, level, and deep rump is also expected in the good show type. Deep and wide shoulders and hams which are supported by straight, strong legs is also another feature which he will look for. When he thinks about the quality of the animal before him he will determine that by the size and strength of bone and joint, the fineness of the coat of hair, and the smoothness and firmness of the flesh. These are among the more important things which you can expect your pig to be judged for. It might be very interesting for you to take a little time off and make a special study of these very points on your own pig and when you go to the show and see all the others with which he has to compete, again, it would be well for you to make a careful comparison just as the judge is going to do. This will give you some first class information which may come in very handy at another time.

Then, there is another matter which concerns itself with showing hogs, and this is of no small importance, either. It is well for you to know at least the approximate time that your pig will be called to the judging ring. This will give you an opportunity to see that he has had plenty of fresh water and a light feed before entering the contest and will also give you sufficient time to give him a little extra brushing up. The feeding should not be overdone—just enough to make him look well filled out and keep his disposition good for the hour that he is under the eye of the judge. If it is necessary for you to handle your pig while in the show ring, there are also some points worthy of your consideration about this matter.



Never stand between the judge and your pig. Watch the judge closely and when you find him studying your pig, be sure to see that the pig is showing off to the very best advantage. For instance, a slight touch with a stick may make him show the arch of his back to much better advantage and it is well to allow him to move about the show ring a little because if the judge takes much time the pig is liable to become tired and when this happens, his back is liable to sag a little and his pasterns tend to grow weak.

Then, again, some pigs show a tendency to a sway back if they are not allowed to keep their noses close to the ground.

Sometimes an enthusiastic junior likes to engage himself in conversation with the judge while the judging is going on. This is not good politics, juniors, and never indulge in a conversation with a judge unless he invites it. If he asks you questions in the show ring about your pig, answer him briefly and politely. Remember that a good judge is under a mental strain all the time that he is judging because he is trying to do a very fair and impartial job and if he is inter-

rupted by an exhibitor it only makes his task more difficult.

It is bad policy to protest a judge's decision when he once makes it, for it usually reacts with discredit to the one entering the protest and is otherwise disagreeable to everybody concerned. The best policy is to play the part of a good loser if you do not win a prize and spend what time you can in learning from the judge and others wherein your pig was excelled. This will put pep and enthusiasm in your determination to come back next year with a prize winning pig.

Tennessee Club Activities

Through July and August the club boys and girls in Tennessee have been attending camps and short courses and doing what work was necessary during midsummer. Now that the camps are over all club members are at home getting ready for county contests and fairs. All have had instructions selecting and preparing exhibits, in getting their live stock ready to show and in preparing their record books.

Over 100 Attended Blount Co. Short Course

The Blount County short course was held at Maryville College and was attended by more than 100 boys and girls from the various parts of the county. No county in the state has held a more interesting short course, for here the officials of Maryville College turned the entire institution over to the boys and girls. The camp fire, basket ball, volley ball, dodge ball, rope jumping, and singing club songs were the leading forms of amusement. The instructional work covered all phases of club activities, health, and character building.

Camp Charles A. Keffer

In Montgomery County the club boys used the scout camp. The boy scouts from Clarksville had been camped for two weeks and the club boys planned theirs just following. The scouts left their tents and other equipment so that all the club boys had to do was to step in and have a good time. They went swimming in Red River each day, played dodge ball, visited nearby club projects, and had moving picture shows at night. These boys had a touch of real camping and all enjoyed it.

A Junior Dairy Club Member

Clinton Moore of Cordova was one of the first boys in West Tennessee to enter the junior dairy club with a young pure-bred calf. Most boys begin with weaned calves, but since Clinton's father, Mr. A. L. Moore, operates a good dairy farm it offered him the opportunity to begin with a young calf and get the experience of raising it from the beginning

Clinton "made the team" in the live stock judging work when County Club Leader Hardy was selecting a team to represent Shelby County in the club boys' stock judging contest to be held at the Tri-State fair in Memphis. His grade was 81¼% and was next to the highest made in the county.

Clinton takes a keen interest in all the work on his father's farm and in return his father gives him every possible assistance. When a party of club boys recently visited Mr. Moore's farm to judge Jersey cattle, he said, "I didn't know I could miss that boy so much until he went away to the county short course for a few days, but I am glad he can go and be with the other club members."

Madison Club at Crawford Springs

The Madison County Club boys and girls held their second annual camp at Crawford Springs with 95 in attendance. It was a week of recreation and entertainment. Some instructions were also given but were made so attractive that the club members never considered it work.

Shelby County Holds Its First Camp for Club Boys

The Shelby County club boys held their first camp or short course at the West Tennessee Normal School August 9 to 13. The program consisted of judging live stock, instructive lectures, and recreation.

On Tuesday morning the 10th, Poland-China hogs on Davis' farm near Neshoba were judged. After a sumptuous picnic dinner served by the Neshoba people the boys spent the afternoon on Duntreath farm where they placed a ring of Duroc hogs and inspected the entire herd.

Wednesday was devoted more to the study of dairy cattle. A visit to A. L. Moore's farm at Cordova was a real treat to those who admire good dairy cattle as well as a good general farm. The entire forenoon was spent on this farm. A ring of Jersey cattle was placed and considerable time was spent studying approved types of Jerseys. After refreshments were served, the boys returned to the normal school for lunch.

The normal school owns a two-year-old Duroc boar that the club boys had admired since they first arrived. The entire club studied him during the afternoon with score cards. This was more detailed work than the placing of a ring of four animals as was done on the other farms.

On Thursday, the last day of the meeting, two rings of Holstein cattle were placed. These were from the herd on the normal school farm.

From the work in this camp the boys obtained some splendid experience in judging two breeds of cattle and two breeds of swine. Their score cards and place cards were sent to the University of Tennessee to be graded. From these competitors, a team of three boys was selected to represent Shelby County in the judging contest at the Tri-State fair.

Assistant County Agent Hardy contemplates giving this team further instructions in the study and placing of various breeds of live stock and there is no reason why the Shelby County club team should not be a strong competitor in the club boys' judging contest at the Tri-State fair.

G. L. HERRINGTON,
State Club Leader.

Junior Letters

Hoard's Dairyman Juniors:—I received the fob, button, and creed and am very pleased with them.

I feed my pigeons wheat or rye. I have a coop about 4 ft. by 4 ft. I let them fly all over. One pair is setting on eggs.

I live on a 130-acre farm. We have 15 cows and young stock, 4 horses, and 16 hogs. We also have about 80 Rhode Island Red chickens.

Good luck to all the juniors. I wish some of the juniors would write to me and I will answer every letter. My address is R. R. 1, Box 78, Denmark, Wis. Maynard Larsen.

Hoard's Dairyman Juniors:—I live on a 200-acre farm. I am 10 years old.

My creed, fob, and button came last week. I believe every word on my creed is true. I am in the sixth grade.

We have two Jersey calves and two Brown Swiss. We traded a bull for a heifer and a cow for a heifer. We have three horses. Their names are Betty, Molly, and Lena.

Point Arena is a little coast town in Mendocino County. We have about six stores here.

I have six sisters and one brother, a niece and a nephew.

I want some of you juniors to write to me. My address is Point Arena, Calif.

Irvin Ledford.

Hoard's Dairyman Juniors:—Hello. This is my first letter to the juniors.

We have 5 head of horses and 16 head of cattle. I have a fine Guernsey heifer. She is 15 months old and a pure-bred, too. She is half white and half red. We have 17 hogs of which one is mine. I live on a 159-acre farm in Main township, Columbia County. We have had the Gloria light system in for 4 years. We have to watch our cows of which I do mostly.

I wish some of the juniors would write to me My address is Catawissa, Pa.

Chas. A. John.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

COUPON

HOARD'S DAIRYMAN Juniors,
Fort Atkinson, Wisconsin.

I want to join your Juniors Club. My father's name is _____.

I am _____ years old and like _____ (name breed) cows best. Send me the watch fob, button, and creed and enroll me as a member.

O. work, stock raising, fruit growing, soil improvement, drainage, handling of men, farm accounting. Excellent references. No small proposition considered. Address BOX 376, care Hoard's Dairyman.

Position wanted as veterinarian to one or more large stock or dairy farms or breeders' association. Two years experience in general practice, one year experience in exclusive cattle practice. Good references. Illinois or Wisconsin preferred. DR. JAS. D. YOUNG, Genesee Depot, Wis.

New York Butter Market

NEW YORK CITY, SEPTEMBER 21:—The recent overturn of the condensed milk market is leading dealers in butter to wonder regarding the effect on the butter market of the conversion of milk, which has heretofore been used by condenseries, into other dairy products. The report is quite general that condenseries throughout the country will accept no more milk for a period of several months. The reason for that, rather indirectly, is the decrease in the cost of sugar. Several of the large corporations, which own strings of condensed milk manufacturing plants, have vast quantities of the finished product stored away. It is reported that one of the largest of such corporations has fully 75 million dollars tied up in finished condensed milk. As the greater part of that was manufactured when sugar was at the top price, it follows that a large loss will be entailed if the company continues to manufacture condensed milk with cheaper sugar. The companies naturally feel that the prices of condensed milk which now obtain must continue in order that they protect themselves on the high priced stocks which they have on hand. For that reason additional stocks of condensed milk will not be manufactured until the present supply is exhausted.

It is not unreasonable to suppose that much of the milk that is at present going to supply condenseries will be converted into cheese as that is the most available market for whole milk when farmers are not prepared to utilize skimmilk at home. However, it is very probable that much of the cream will be manufactured into butter. There is, of course, no method by which one can determine how much butter will be made from that source of supply, hence dealers are in somewhat of a quandary in their efforts to determine whether or not the present state of the condensed milk industry will have a decided influence on the butter market. It is self-evident that farmers who have patronized condenseries during their times of prosperity are now confronted by a real problem.

The butter market is in a rather unsettled condition at the present time. There is an unlimited demand for butter of high quality, while the demand for undergrade butter is at the minimum. Dealers at present are beset with two worries, one being the result of an inadequate supply of high quality butter and the other resulting from the gradual accumulation of large quantities of poor butter. It seems that the consumer must eventually become less critical of his butter and be content to use a fair grade of butter instead of only that of top quality. It is true that a very small percentage of the butter being received will score 92 points or above. That is a condition that is always found at this season of the year. While, with the approach of cooler weather, the quality of butter will improve, that will not remedy the condition of over-supply of undergrade butter that prevails at the present time.

Last week Monday and Tuesday were holidays for the Jewish trade, it being the Jewish New Year. With that class of trade off the market for two days, the price declined ½c. However, on Wednesday with the return of Hebrew buyers the market began to strengthen and since that time there has been an upward tendency to prices of high quality butter. That tendency, because of no demand, has not obtained with butter that scores below 91. The result is that the margin of prices of undergrades and fancy butter has constantly widened. While the consumer may be forced to buy butter of mediocre quality it is doubtful if the margin becomes any narrower during the weeks to come. Since last week Wednesday, the quotation on high quality butter has advanced 2c, and the price will undoubtedly go higher. Established quotations today are: Extras (92 score), 61c; higher scoring than extras (93 score or higher), 61½@62c; firsts (90—91 score), 55½@60c; firsts (88—89 score), 51½@54c; and seconds (83—87 score), 48@51c. W. B. LIVERANCE.

Saves Good Bulls from Slaughter

That bull associations are important in the development of a community is indicated by results at the Grove City, Pa., dairy community, where there are two associations—one a Holstein and the other a Jersey. The results of the work here are shown in the exhibit of the United States Department of Agriculture at the National Dairy Show. The reduced cost of providing good pure-bred bulls is an advantage of the association that first appeals to the dairyman; but the outstanding advantage is that bulls owned by the association are kept until their daughters are tested. Bulls of great value, owned individually, have frequently been slaughtered before their value was known. Through the bull associations, however, bulls worth thousands of dollars have been saved for use as long as they live.

Jersey Cattle Notes

For week ending Sept. 17:

Number of animals registered: Bulls, 276; cows, 689; total, 965. Number of transfers recorded: Bulls, 207; cows, 473; total, 680.

When the get-rich-quick plan comes in the mail, remember two things; either put your money where you can watch it, or trust it to Uncle Sam, who doesn't need watching.

Have You A Little Spare Time?

Have you a car—or a horse and buggy?

HOARD'S DAIRYMAN would like to offer you a proposition to look after our subscription interests in your community during your spare time.

It would be light, pleasant work among your old neighbors; and we can make it really profitable, too.

Write and tell us about the territory around you and how much you could take care of, and we'll make you a proposition.

Hoard's Dairyman, Fort Atkinson, Wis.

"Kant-Suk" Calf Weaner

LIGHT—strong—humane! Cannot possibly injure cow or calf. Being made with a hinge-joint, it swings out of the way when calf eats or drinks, but absolutely prevents sucking. Extremely easy to put in place. Endorsed by dairymen everywhere. At dealers. Sent Prepaid: Calf size 45c; Cow size 60c

Wagner Specialty Co.,
Dept. F. Burlington, Wis.

Dispersal Sale Guernsey Herd

I desire to close out my entire herd consisting of ten fine registered Guernseys and twenty-five full blood grades, at once. Also dispose of Dairy farm one-half mile from Quincy, Illinois. This herd contains two advanced Registry cows purchased of W. D. Hoard. The herd bull sired by Bob Rilma's Monogram, owned by Ralph Tratt, Whitewater, Wisconsin, some fine females purchased from other noted herds. The grades were all selected by expert Dairymen and are high class. The entire herd or any part thereof are for sale.

W. Emery Lancaster, Quincy, Illinois

$200

Buys This Ten Months Old Bull

If you like deep middles, straight rumps, square udders with well placed, easy milking teats, in your herd—*BREED FOR THOSE POINTS.* Be sure it is in the dams back of your herd sire. It's all there in this bull; we've bred three generations of his dams, and his dam is a 19-lb. cow. This calf is good all over and nicely marked. Send for his pedigree and photo and see.

Just the bull for a good grade herd.

A. J. Lashbrook, Northfield, Minn.

(*Federal Accredited Herd*)

Bred in the Purple $200

Holstein bulls up to 9 months old.

Sire—Joh Segis—whose 15 nearest dams average over 30 lbs., and whose own dam made over 700 lbs. milk in 7 days.

Dams—A. R. O. cows up to 24.74 lbs. mostly all 2nd and 3rd dams A. R. O. cows.

One of these royally bred youngsters can belong to you for only $200.

Federally Accredited herd.

Henry J. Karpinski, Route 7, Oswego, N. Y.

Serviceable Bulls For Sale

Sired by Pabst Pontiac Hengerveld, a son of King Pontiac Champion from Pabst Hengerveld Colanthus (31.5 lbs. butter in 7 days, 1,957 lbs. in a year.

These are nicely marked, well grown youngsters out of good producing dams. Several are ready for service, others are younger.

Write today.

John Alexander, Baraboo, Wis.

Gordondale

FLEMING BROTHERS, 255 Union Stock Yards, Chicago

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Milking Tube

Long time ago I had a hollow needle to run up into a cow's teat when it was cut and could not milk without much discomfort to the cow. Please write me where I can buy one and what one will cost.

Hot Springs, Ark. J. H. R.

A milking tube often may be had from a local graduate veterinarian or may be ordered through the druggist, or bought direct from a mail order house or veterinary supply house.

Sores on Udder

I have a little trouble with my cows. They have a scab on their udder, looks like a wire cut when it is healing up. It is on hind quarter of udder and inside of her leg. Do you think this would help to dry them up?

Denmark, S. D. H. P. R.

Such sores often are caused by rubbing of the distended udder against the hind leg when the cow walks or runs. Milk affected cows three times a day. Cleanse sores perfectly and paint once with tincture of iodine. Afterward apply benzonated oxide of zinc ointment twice daily. If that does not suffice apply iodine ointment once or twice daily, as found necessary.

"Forcing Co-operation"—How About It?

HOARD'S DAIRYMAN:—I was greatly interested in an editorial on "Forcing Co-operation" in Hoard's Dairyman Aug. 27, 1920. I'm afraid I don't fully agree with the idea expressed in the following sentence: "We do not believe in laws which force the individual to do certain things even though the doing of them would be to his advantage."

Let's see about that. How about forcing a thief or a burglar to be good and quit their thieving or burglarizing? Why wouldn't it be all right to force a dairyman to patronize a pure-bred bull for breeding his cows, by keeping such a bull himself or making it illegal to keep a scrub bull? There are always some bull-headed people (and they are sometimes found among farmers, unfortunately) who naturally and unreasonably want to "buck" certain progressive movements, and I, for one, would favor forcing them either to support them or move on, by preventing them from doing their own (to them) sweet (or sour) way.

Wouldn't you force a neighbor to co-operate by keeping his thistles and other noxious weeds cut before they bloom and "go to seed" and spread all over your farm and the surrounding country? I would. Wouldn't you compel him to co-operate by sending his children to school, and not have them grow up ignoramuses? Of course you would.

Even with all the suggested "forced co-operation" there would still be plenty of room for untrammeled and misdirected individual effort, such as the conduct of the farm, the growing of farm products, improving the home, etc. In those things there would be freedom enough to do a lot of useless and unprofitable work by the individual.

But why not compel people to do what is right, at least where there is no question, or "no two ways about it"? Wouldn't you compel people to act on the belief that 2 times 2, either when added or multiplied, gives a result of 4? I would.

A good many people are only big, overgrown children, and what the majority of really educated, sane folks agree upon, it would seem the minority might safely be forced to submit to. Oh, yes, I know the majority of us were forced to submit to liquor saloon domination for a long time, and it was mighty unpleasant, but we are talking about forcing right things upon only a few people, for surely only a small minority would be found to stand against anything that makes for real progress and success!

I believe I am in favor of forcing upon some folks the things that everybody knows are good for them, for doubtless very soon those few benighted folks would see that they were mistaken, and would turn around and thank the very people that compelled them to see things straight. Why, there are a lot of saloon-keepers that are rejoicing now in having been forced to become respectable citizens instead of robbers or unconvicted criminals. They would be the last to vote the return of saloons. No doubt they would now join the dairymen in compelling people everywhere to use milk as a beverage, and especially to see that all the growing children get all the milk they should have. There are a good many ignorant parents who ought to be forced to supply their children with the milk they need to insure their proper physical development, instead of feeding them on tea and coffee and other less nourishing foods and drinks.

But this is a big subject, and I confess that I don't know enough to treat it in an adequately scientific and comprehensive manner. But I believe there is a safe and sane position that one could take, and also an extent or limit to which one could go, in forcing certain unquestionably wholesome things upon the misguided and misinformed citizens, that would result in not only great benefits to them but to everybody else. Then why not try to discover those generally beneficial objects, and also if there is not some satisfactory way in which they can be attained, even if a little moral as well as legal force has to be applied?

I would not want to injure any one in any way, but if a thing is unquestionably right and beneficial to all concerned, then I believe I would help establish it even if it rubbed on some one's corns—corns that they should get rid of instead of continuing to cultivate and keep them growing.

Washington. GEORGE W. YORK.

Paint is costly, and so is labor; but paint prevents decay, and is a form of insurance against more expensive repairs.

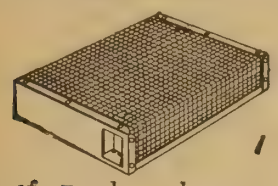
Protect Her Health

DON'T risk losing a valuable animal. A Pilling "Easy-to-Use" Cattle Case will equip you to relieve promptly milk fever, bloat and other cattle troubles. One animal saved will repay you many times. Prepare *now* for emergencies.

Pilling "Easy-to-Use" Cattle Case

Case No. 2 contains a complete milk fever outfit, syringes, cattle trocar for bloat, several special instruments for treating teat troubles and other helps for the stockman. Purchased separately, these would cost $18. Price, complete with case and "Easy-to-Use" directions, $12.50, delivered by parcel post. Order today. Send for booklet on Cattle Instruments—describes Milk Fever Air Treatment.

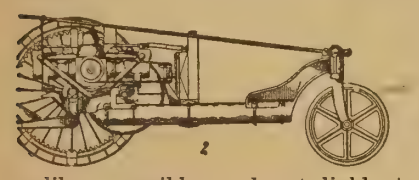
G. P. PILLING & SON CO.
Instrument Makers for More Than a Century
2300A Arch Street Philadelphia, Pa.



Cattle Case No. 2

Inventions and Appliances of Interest to Agriculture

Chick Feeder

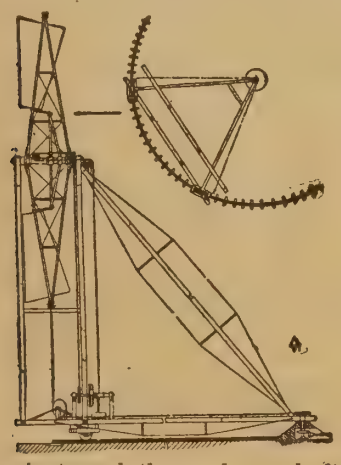


The object of this feeder is to permit little chicks to feed without interference from larger chicks, for this purpose the door is made so small that it admits only the small chicks. The ends and bottom are made of sheet metal, and the top and sides of wire mesh. The ends and bottom could be

made of wood, and more doors would give freer access. (Cyclone Mfg. Co., Urbana, Ill., U. S. Patent, 1,334,182).

Tractor

The reach and traverse strut of this tractor are tubular and the machine therefore, has, it is claimed, a maximum of strength with a minimum of weight; and its frame is compact,



readily accessible, and not liable to breakage.

(La Crosse Tractor Co., La Crosse, Wisconsin. U. S. Patent 1,318,785.)

Power Windmill

This self-regulating windmill is designed particularly for irrigation, drainage, and grinding. It is mounted on a central pivot, and a circular track, and it so moves that it is always on the lee side of the pivot. Its power is carried by a rope belt from the rim of the wheel to a pulley at

the pivot, and thence by a shaft to the pump or grinder.

(Union Land and Power Co., North Yakima, Wash. U. S. Patent, 1,329,-299).

JERSEYS

How Much Milk Should a Cow Give?

IT depends on the size of the cow. An overgrown cow that eats her head off sometimes can't give enough milk to pay her feed and labor bills. The reason is that however much of her feed goes to the milkpail, more of it goes to build up useless hulk. She skims her milk for her body—and that's expensive for you.

Jerseys, on the other hand, are always profitable. They are more udder—less cow. They concentrate on butterfat—the profit part of the milk—not alone on mere bulk. A pailful of Jersey milk contains almost twice as much butterfat (5.37%) as that of other breeds, and people are glad to pay more for it.

Write to the Jersey Information Bureau for the facts on how to make dairy dollars. Get the books that tell how others have succeeded with Jerseys and how you may succeed.

GOSSARD BREEDING ESTATES

NANCY'S MINT MASTER

Idlewood Farm offers at private sale these Ayrshires

The great bull, NANCY'S MINT MASTER No. 20151, junior and grand champion at National Dairy Show in 1918, and first prize senior calf in 1917 (was not shown last year) said to be the most perfect type Ayrshire bull ever bred in America.

FIVE FRESH COWS; with four heifer calves and one bull calf at sides, the five calves sired by this grand champion bull. One cow is a Roll of Honor cow and a great show cow as a heifer, and the others are highly bred young cows ready for test.

Eleven Head in All

Nancy's Mint Master, undefeated in the show ring in America, was sired by Howie's Mint Master, also grand champion bull in America and Scotland, with a long line of undefeated ancestors, sire of A. R. daughters. This wonderful bull, only four years old on August 14, 1920, was purchased by Idlewood Farm at the 1919 National Ayrshire Sale at the highest price ever paid for an Ayrshire bull at public auction. He is easy to handle—a child can lead him about—and is in excellent, practical breeding condition. In August births, four of his five calves were heifers. If you want to build up a herd with the best bull in America, here is your chance. Price and other information desired will be furnished on application.

T. J. Murphy, Owner, Devon, Pa.

Middlesex Meadows Ayrshires

No matron stays in the herd that does not make an A. R. record of 10,000 lbs. or better. Most of them have records far exceeding this standard. Their bull calves by our herd sires are for sale.

Tschudy Ayrshires at Public Auction

Edelweiss Farms Annual Offering of Superbly Bred Ayrshires

Sale to be held in the Fair Grounds Sale Pavilion

Monroe, Wisconsin

Saturday, October 16, 1920

Following National Dairy Show at Chicago

51 Head An offering of Ayrshire cattle bred on Edelweiss Farms—every lot offered rich in high class milk and butter breeding. **51 Head**

AN auction principally of young females out of A. R. O. cows and sired by peerlessly bred herd bulls! The richest bred offering of Ayrshires ever entering a midwest sale ring!

Do you want individual quality? Do you want breed characteristics? Do you want milk and butter breeding? Then you will find it in this offering! Every one of the right type and individual quality to please the most exacting buyer!

In order for you to appreciate the rich breeding and individual quality of the females that comprise this superb draft of Ayrshire cattle, first read what outstanding sires have been usd in this herd:

Beckey's Majestic 10774, sired by Howie's Majestic Imp. who is the sire of seven A. R. daughters with fourteen completed records that average 10,218 lbs. milk, 402.44 lbs. fat, among whose daughters is Miss Letta with a record of 14,007 lbs. milk, 506.26 lbs. fat.

There are four cows in this offering sired by Beckey's Majestic, one of them, Viola of Edelweiss 49464, has for her dam Cold Spring Queen 3d, A. R. 10,179 lbs. milk, 338.18 lbs. fat. Cold Spring Queen 3d is sired by Joe Jefferson 8233, sire of eight A. R. daughters whose records average 11,162 lbs. milk, 394.62 lbs. fat. One of the cows sired by Joe Jefferson is Lady Lincoln A. R. 14,778 lbs. milk, 511.57 lbs. fat.

You will find the name of Joe Jefferson appears a great many times in the tabulations of this offering, he being the sire of the dams of a large portion of the young cows and heifers that comprise this offering.

Duke of Edelweiss, 18279 sired by Beckey's Majestic dam, Majesty's Princess by Howie's Majestic, mentioned above, is the sire of eight cows and heifers in this sale.

One of the cows sired by Duke of Edelweiss is Sweet Pea of Edelweiss 2d 49195, whose dam, Sweet Pea of Edelweiss 40210, is sired by Matie's Earl, the sire of five A. R. daughters. The dam of Sweet Pea of Edelweiss 40210, is Sweet Pea 19947 A. R. 11,649 lbs. milk, 398.11 lbs. fat.

Matie's Earl 12550, sire of five A. R. daughters whose records average 7,698 lbs. milk, 284.34 lbs. fat, is sired by White Prince of Almond. The dam of Matie's Earl is Matie of Sand Hill 23323, A. R. record 13,897 lbs. milk, 593.16 lbs. fat, sired by Earl's Choice of Spring Hill 8289, sire of forty-two A. R. daughters with sixty-eight completed records that average 9,045 lbs. milk, 379.75 lbs. fat.

Matie's Earl 12550 is the sire of four cows in the offering; one of them being Rose Spot of Edelweiss 49194, whose dam is White Rose Spot 2d sired by Joe Jefferson, and out of White Rose Spot 18207 A. R., 10,393 lbs. milk, 377.62 lbs. fat.

Cavalier's Kilnford Chaumier 18659, sired by Bargenoch Gay Cavalier Imp. sire of nine A. R. daughters with ten completed records that average 8888 lbs. milk, 357.60 lbs. fat. Bargenoch Gay Cavalier was grand champion at the National Dairy Show 1912-13; also sire of Cavalier's Lord Stuart, Junior and Grand Champion National Dairy Show 1917; sire of Cavalier's Lord Roseberry, many times champion and sire of the first prize get of sire class at the National in 1918 and 1919.

The dam of Cavalier's Kilnford Chaumier is Kilnford Bell 3d Imp. A. R. 13,525 lbs. milk, 532.98 lbs. fat; Grand Champion over all breeds at the National 1913-14, and winner of Valentine Silver Trophy; dam of Cavalier's Kilnford Bell 3d, Senior and Grand Champion female National 1919.

Where could you find better milk and butter breeding than this? Cavalier's Kilnford Chaumier is the sire of sixteen females in this offering, ranging in age from one year to three and four years old, and all out of well bred dams.

Cavalier's Goldfinder 21214, sired by Cavalier's Lord Roseberry by Bargenoch Gay Cavalier Imp. is the sire of four heifers in the Edelweiss farms sale offering. Cavalier's Lord Roseberry was many times champion and sire of first prize get of sire class at the National Dairy Show 1918 and 1919. The dam of Cavalier's Lord Roseberry is Beuchan Dorothy Imp. 32720, first prize two- and three-year-old at the National Dairy Show 1912-13, A. R. 9,289 lbs. milk, 385.45 lbs. fat, and full sister to Beuchan Ermine, ex-world champion senior two-year-old with a record of 15,186 lbs. milk, 516.64 lbs. fat.

Heifers with such breeding as this on the sire's side should be an attraction, especially since their dams are also sired by such sires as Joe Jefferson, Beckey's Majestic, and Matie's Earl.

Cavalier's Beuchan Silver Tips 20249, sired by Bargenoch Gay Cavalier, sire of nine A. R. daughters with ten completed records averaging 8,888 lbs. milk, 337.60 lbs. fat; Grand Champion National in 1912-1913; Champion show and breeding bull of America for the last eight years, and sire of more prize winners than any bull of the breed.

Cavalier's Beuchan Silver Tips is one of the present Edelweiss Farms herd sires. His dam is Beuchan Dorothy Imp. 32720 by the great Beuchan Peter Pan, sire of 52 A. R. daughters with 66 completed records that average 10,299 lbs. milk, 407.98 lbs. fat. Beuchan Dorothy Imp. was first prize two- and three-year-old at National 1912-13. A. R. record 9,289 lbs. milk, 385.46 lbs. fat. She is a full sister to Beuchan Ermine A. R. 15,186 lbs. milk, 516.64 lbs. fat; ex-world champion senior two-year-old.

Cavalier's Beuchan Silver Tips is the sire of four of the younger heifers in this sale, and he is bred to fifteen cows and heifers of breeding age.

In the offering also are some splendid young herd headers sired by Cavalier's Beuchan Silver Tips and Cavalier's Kilnford Chaumier and out of well bred dams.

NO matter what sales you have attended or what you have previously added to your herd, or how good you think your herd is, you should not miss this sale! Positively every animal offered will be sold to the highest bidder. Absolutely nothing reserved. A sale backed by the Tschudy & Sons square deal, fair dealth method of selling.

Inspection of the catte invited at any time.

ASK NOW FOR CATALOG—DON'T PUT IT OFF!

Every Ayrshire breeder should have copy of this catalog, not only for the information it contains concerning this sale, but to keep his records of Ayrshire events complete. A postal card gets it. Send your own name and address and that of an Ayrshire breeding neighbor if you have one, and we will be glad to forward him a copy of the catalog at once.

Address the sale manager for catalogs.

At The GUERNSEY SALE

Superior Fair Grounds

Superior, Wis., October 6, 1920

I am offering Four Females

Imported Daisy Moon VI, daughter of the famous Daisy Moon, ancestor to Daisy Moon III, 928 pounds fat; Daisy Moon IV, 639 lbs. fat; Daisy Moon IV is perhaps the best type of any of the daughters of the great Daisy Moon.

No. 2: Lady Fredericka of Craigamoor, a cow of France and May Rose breeding, which has just completed a record of 642 lbs. fat.

No. 3: Craigamoor Margaret, out of the same dam as Craigamoor Phoebe, who will make from 650 to 700 pounds, barring accidents this year. Her sire is Craigamoor May King, daughter of Raritan's Daisy Moon of Craigamoor, 778 pounds fat.

No. 4: Craigamoor Grace, a beautiful yearling heifer, double granddaughter of Austerlitz. Sire, Craigamoor May King.

I am also offering at the state sale at Madison, on October 13th, 2 heifers, Craigamoor's Galaxy's Daisy Moon, born March 1919, sire, Craigamoor May King, dam, **Craigamoor Galaxy, full sister of Craigamoor Cosette**, who has completed a record of 676 pounds fat.

No. 2: Craigamoor Cherry, yearling daughter of Craigamoor May King and Lady Fredericka of Craigamoor. The dam and sire's dam of this heifer have records averaging 710 pounds fat.

I also will sell at private sale a young sire between 13 and 14 months old out of an untested heifer, daughter of Lady Fredericka of Craigamoor and sired by Craigamoor May King. $400 will take this young sire.

Geo. C. Cooper, Superior, Wisconsin

Wisconsin Guernsey Breeders' Ass'n

Second Annual Guaranty Sale

October 13 - - - Madison, Wis.

A Sale of the Best that Could be Selected from the Good Herds of Wisconsin—*the Foremost Guernsey State*

LAMONT OF MAPLE HILL 69744
9,897.1 lbs. milk, 570.87 lbs. fat at 2½ years. A daughter of May King's Vrangue of Ingleside 15430. Consigned by Fruit Bros.

BELL BUOY OF LINDA VISTA 19430
Sire of 16 A. R. daughters—4 others on test. One of the best proven bulls in Wisconsin, as he sires both type and production. Included in State Sale.

FLOSSETTE OF GRAYSIDE 73407
2nd Prize Iowa State Fair, 1918. 5th Prize Waterloo Dairy Congress, 1918. Now on test and will finish with about 500 lbs. fat. Included in State Sale.

BULLS Very few bulls have been selected for this sale, but those few are good ones, fit to head good herds. They include both proven sires and young bulls.

Bell Buoy of Linda Vista, that already has 16 A. R. daughters will be sold together with two of his best daughters. His get are proving themselves in the show ring as well as on official test.

Elsir of Glenburnie, a son of Itchen Daisy 2d (702 lbs. fat as a 2-year-old.) Two of his daughters are also consigned.

Lady's Rex of Maple Hill, a son of Rex of Rich Neck and out of Norwood's Lady Makefield (629.2 lbs. fat.) His two nearest dams have more high record daughters than have the first two dams of any other Guernsey sire.

A son of Ne Plus Ultra.

FEMALES The female list includes an excellent lot of A. R. cows, among them:—Craigamoor Cherry with 642 lbs. fat in Class A.

Lamont of Maple Hill, 570.87 lbs. fat, Class F. She is a daughter of May King's Vrangue of Ingleside.

Maiden of Homestead, now finishing a record above 500 lbs. fat.

Belle of Forest Lodge, on test, and will finish with about 560 lbs. fat.

Open and bred heifers will include:

Two daughters of that National Dairy Show winner, Hopeful of Edgemoor.

Two daughters of Dairymaid Criterion of Iowa.

Three daughters of Langwater Frenchman.

Two daughters of Craigamoor May King.

Two daughters of Ultra King of Edgemoor.

Two daughters of Florham Victor.

The Wisconsin State Guernsey Sale is in charge of the following committee: James H. Murphy, Delavan; G. R. Ingalls, Eau Claire; Lloyd Rundell, Roberts; Gavin McKerrow, Pewaukee; Clifford Capener, Baraboo.

The sale entries have been inspected by these men personally. Every entry is sold subject to a 60-day retest for tuberculosis.

On the evening previous to the sale a meeting of Guernsey breeders will be held in the Y. M. C. A. building in Madison to which all interested are cordially invited.

Sale will be held in the Stock Pavilion at the College of Agriculture

Send for your Catalog today to

Southern Wisconsin Guernsey Breeders'

First Annual Sale

October 14 - - - Janesville, Wis.

75 Registered Guernseys of Quality

These Guernseys were all Inspected by the Sale Committee
They are Sold Subject to the Following Rules—

1—No female under six months of age, or male under eight months of age will be sold.

2—No animal consigned may be sold previous to the sale.

3—Every animal entered must be accompanied by a certificate of health. Consignors agree to the sale of all animals subject to a 60-day retest for tuberculosis.

4—Every animal is guaranteed to be as represented. The consignor will be responsible for such representations.

5—In case any animal sold is announced as bred and proves not to be in calf, she can, at the option of the consignor, be returned to him and the purchase price refunded; or when returned, kept by him for a reasonable length of time in order to get such animal in calf, but if within such reasonable time, she fails to get with calf, the consignor must then refund the bid purchase price.

6—No person consigning animals to this sale will be allowed to bid on his own animals or permit any person to bid for him.

7—All females three years old or over must have dropped a normal calf within fifteen months previous or be within three months of calving, the last calving date in each case to be published in the catalog.

8—The Secretary will withhold the purchase price from the consignor until registration paper and transfer properly signed are turned over.

The Sale Includes

FLORHAM VICTOR 37061
An outstanding son of Ne Plus Ultra. Several of his get are included in the Southern Wisconsin Sale.

some very high class bulls; 6 out of dams with over 600 lbs. butterfat, several of them grandsons of King of the May.

A number of A. R. cows including Ladysmith of Grafton (603 lbs. butterfat) and Roselle of Fox Valley, now on year test and finishing with over 600 lbs. fat.

An excellent selection of heifers, bred and open sired by such bulls as Florham Victor, Sailor Lad of the Fontaines and others.

ROSELLE OF FOX VALLEY 61739
Now on test and will make over 600 lbs. fat. Included in Southern Wisconsin Sale.

October 15—60 Excellent Grade Cows

A few high class registered bulls will be sold on the 15th, the day following the pure-bred sale.

These are top notch grade cows, good, healthy producers.

Dairying Thirty Years Ago

In the production of poor, cheap, summer butter lies involved an enormous loss to the farmers of the United States. It is a tremendous tax imposed by indifference and a lack of dairy intelligence. Good posting and good thinking and a little old time Yankee energy would, in a short time, avert the payment of this fearful tax. Curiously enough we do not hear of any petitions being sent to Congress for relief from this tax.

Where is the Overproduction?

For years we have listened to the never ending refrain, "You will overdo the dairy business." Every depression in the price of dairy products is a signal for this outcry. The present price of strictly first-class butter ought to be a sufficient answer to that senseless cry. The men who utter it are surface reasoners. To speak the strict truth, there has never been an overproduction of really fine goods. The overproduction consists in the cheap and unskillfully made article. It is very hard to get this fact into the comprehension of the average farmer.

⚜

The Fort Atkinson creamery paid one patron last year, who followed winter dairying, $63 per cow for the milk of his herd of thirty-five cows. It paid another patron, who was bound to follow summer dairying, $40 a head as the earnings of his herd of fifteen cows. That was the difference in the reward of one patron's labor over another by the use of judgment, thought, skill—in a word, brains.

Death in a Silo

A very strange accident occurred at Niles, Michigan, by which a prominent and very highly respected citizen, Mr. Edward M. Ballard, lost his life; and in trying to rescue him, two others came near sharing the same fate. It seems to us, after being made acquainted with the composition of silo pits, that it is a case, over again, of carbonic acid gas settling in the deep pit, the same as it settles in wells sometimes.

⚜

News comes to us through Mr. Geo. A. Dewinton, of Butte City, Montana, of a terrible condition of things in that city growing out of the most outrageous abuse of the cows of the place that are suffered to run at large, night and day, and allowed to consume the garbage that is thrown into the back alleys. The milk had thus become so poisoned that the death of no less than 27 young children that had been fed on the milk was directly traceable to that one cause. The people were up in arms about it; and the result came that no one was allowed to make or sell milk who did not keep his cows on wholesome food, and keep them in cleanly places—all subject to the supervision of competent persons.

Dairy Cattle at the State Fair

There was a fine show of specific dairy cattle at the state fair. Of the Jerseys Liefeber & Johnson, of Milwaukee, had 27 animals, C. N. Griffith, Whitewater, 15, Gen. Geo. W. Burchard, Fort Atkinson, 14, and L. W. Smith, Whitewater, 11. F. W. Tratt, of Whitewater, had about 20 Guernseys. At the head stood the magnificent bull, "Squire of Les Vauxbelets 4th, No. 771", formerly the property of the late I. J. Clapp. He has been a prize winner wherever exhibited since 1884. He seems to be perfect and as sound as when he was born. T. L. Haecker of Madison had both Jerseys and Guernseys in the herd he had on exhibition. Among the Holstein-Friesians Gillett & Son, of Rosendale, and Rust & Bros., of North Greenfield, had large and magnificent herds. "Oakland Chief", at the head of the herd of Gillett & Son, is a very fine animal, weighing 2,210 lbs. He has become noted as the sire of great butter-producing heifers, as the records they have made as published in the Dairyman within the year attests. The cows, heifers, and young things were fine specimens of the breed. The same may be said of the herd of Rust & Bros.

Grandsons and Granddaughters of
Colantha Johanna Champion

We have for sale several sons and daughters of Ontonagon Emblagaard Duke, son of a 700-lb., 10-year-old cow that is also the dam of a 1,227.48-lb. 3-year-old (world's record). These are all good individuals from good A. R. O. dams. They are from 6 to 14 months old and priced at from $150 to $500.

Write for pedigrees and prices.

Pabst Stock Farm
First Semi-Annual Sale

40 Bulls

On June 15th, all private sales were discontinued at Pabst Stock Farm. This was done with the sole idea of having two sales a year to dispose of all surplus stock, thus offering bulls with a very wide range of value. Such a sale must necessarily include the very greatest calves born on Pabst Stock Farm as well as those of more average quality. Old established breeders and beginners will thus find in this first annual sale, bulls qualified to head their herds, regardless of the sum they feel disposed to invest in such animals.

5 Ready for Service
35 from Three to Eleven Months

One by Korndyke Segis Johanna; 12 by Creator; 2 by King Pontiac Champion; 9 by Pabst King Pontiac Lad; 12 by Woodcrest Clyde.

With but one or two exceptions all of the bulls are by sires that have been in use in the Pabst Stock Farm herd, and are from dams, practically all of which are present members of the herd and will be developed year after year.

A very large majority of the bulls are from daughters of King Pontiac Champion or Korndyke Segis Johanna and almost one-third of them are by Creator. Several of them are three-fourths brothers to Creation that sold for $20,000, and in some instances are backed by two generations of 30-lb. dams and succeeding generations of long distance dams. Perhaps as notable a collection of young bulls as was ever put on the market by any breeding farm at a single time. Coming just at the time of the National Dairy Show, it affords breeders a wonderful opportunity to combine the two events.

Oct. 9th AT THE FARM

The Class Of Bulls We Will Sell

A ten months old son of Creator from a 27.97-lb. 2-yr.-old with 32.55 lbs. as a 3-yr.-old.

A yearling son of King Pontiac Champion from a sister to the heifer that sold for $30,000 at St. Paul.

A son of Creator from a 34-lb. daughter of King Pontiac Champion with 667 lbs. milk.

A nine months old son of Pabst King Pontiac Lad from a 33.99-lb. 4-yr.-old.

A six months old son of King Pontiac Champion from a 32.82-lb. senior 3-yr.-old, next dam 34 lbs.; all with good year records.

A son of Creator from a 22-lb. 2-yr.-old daughter of King Pontiac Champion and sister to a two times 30-lb. cow with over 768 lbs. milk.

Send for pre-sale bull list. Catalog furnished at sale.

Don't Forget the Date

Oconomowoc, Wis. 10:30 A. M.

Columbia Co. Fair Sale

Portage, Wis., October 7

50 Head Pure-bred Holsteins

to be sold under a 60-day guarantee

Included is the dispersal of the wonderful Elmcourt Farm herd, owned by W. O. Briggs, Briggsville, Wis. A high class herd, in every sense, and the best of breeding the country affords.

Elmcourt herd is headed by

Pabst Korndyke Blackberry

a fine 3-year-old sire, whose breeding is well-known in Holstein circles. Will be a "Luck Bringer" to the man who buys him.

His dam has 31.68 lbs. in 7 days, 638.68 lbs. in 365 days. His two nearest dams average 36.59 lbs.

His sire, Korndyke Segis Johanna, is also the sire of Pabst Korndyke Cornflower, 38.43 lbs., who holds the Wisconsin state record for 7 days and the world's record for 30 days. This remarkable heifer was sold in the National Sale in June for $30,000.

Pabst Korndyke Blackberry, the head of the Elmcourt herd, carries 75% the same blood as this heifer.

There are 6 fine cows bred to this bull, one a 16.32-lb. junior 2-year-old; a 14.817-lb. junior 2-year-old; a 23-lb. 3-year-old, due to freshen Oct. 23, every dam in her pedigree over 20 lbs., and she herself capable of making 30 lbs.; one from a record dam and sired by a grandson of King Segis Pontiac; and two daughters of Elm Court Pontiac Burke, a son of a 23-lb. junior 2-year-old.

5 nice calves sired by this bull, one a male calf old enough for light service, and whose 4 nearest dams average 28 lbs.; one a good, light colored heifer whose 4 nearest dams average over 28 lbs.

Also a very well bred bull calf, nine months of age, whose dam, Elm Court Johanna Pearl 2nd, had the distinction of having her milk record the 2nd highest in her class in the state of Wisconsin, and her butter record the 4th highest, at the time they were made. This calf will make a first class sire for a good herd.

There will be a heifer calf, good type, sired by the well-known bull, King Korndyke Haidee Ormsby, who recently sold for $8,500.

Also a fine, straight 3-year-old, due to freshen next month to this same bull.

A show cow of great size and conformation sired by Artis Walker Pietertje; dam, Lady Mooie De Kol Greene; and bred to Elm Court Pontiac Burke.

A heifer, nicely marked, sired by Bluebird Canary Butter Boy, the 31.50-lb. grandson of Canary Paul Fobes Homestead. The sister to this bull sold in the last state sale for $3,600. Her dam is Colantha Piebe of Elm Court, a show cow, 27.70 lbs. in 7 days and 808.82 lbs. in 365 days.

Two splendid heifers, sired by Beauty Walker Pietertje King 4th, the show bull recently sold in the Fischer Dispersal in excess of $6,000.

Two 4-year-olds, dandy cows, capable of making large records, in calf to Beauty Walker Pietertje King 4th, and due to freshen about the same time. Should go together. Entire herd recently tested, and sold under the guarantee outlined in the catalog.

October 8th

35 Head Registered Shorthorns

of excellent breeding, including a dandy lot of cows, some with calves at foot, others to freshen soon. From the most noted breeding in the country.

A pure-bred Clydesdale stallion, Nobleman 14136, sired by Laureate 12661; dam, Young Bessie 12654.

Also a pure-bred hog sale. Don't miss it.

Separate catalogs for the Holsteins and Shorthorns. Haeger and Everson to sell the Holsteins.

O. P. V. Silage

A few years ago Professor J. M. Trueman, of the Nova Scotia Agricultural College, began experimenting with a mixture of oats, peas, and vetches for ensilage purposes. This mixture has now been tried out extensively, not only on the college farm but by numerous farmers over the province, and it has been proven that this crop will grow well and yield satisfactorily when many other crops are almost a failure. The crop was first grown on a commercial scale on the college farm in 1914 when 5.7 acres of land produced 65 tons of green feed, or at the rate of 11.4 tons per acre. The first three acres cut gave 45 tons, or at the rate of 15 tons per acre. The following year the average yield in the field crop was a little less than ten tons per acre and it has since been the general experience in Nova Scotia that on good land in proper condition they can easily raise twelve tons or more of O. P. V. ensilage per acre. This ensilage contains over eight per cent more dry matter than corn ensilage grown under the same conditions and in an average year the total amount of dry matter per acre will be more than the amount of dry matter per acre in corn.

The general run of soil in Nova Scotia tends to a light loam. There is very little heavy clay. On the college farm the soil is a gravelly loam, so I presume that the seeding mixture which has proven most satisfactory in Nova Scotia will be equally satisfactory for the light soils. It is two and one-half bushels of oats, three-quarters of a bushel of peas, and one-third of a bushel of vetch, making a total of a little more than three and one-half bushels per acre. The green material is cut just as the oats are about ready to enter the dough stage and before they begin to turn yellow. It is blown into the silo with the regular ensilage cutter. All kinds of stock eat this ensilage greedily and it is giving universal satisfaction. Common vetch is the kind usually used, but I see no reason why hairy vetch might not be substituted and perhaps it would make an even more satisfactory growth than common vetch on light, sandy land.

The mixture of peas, oats, and vetches is certainly a tangled mass, but this is one of the features which makes it easy to handle in harvest. Anyone who has forked green oats alone knows how slippery and difficult they are to handle. The mixture of oats, peas, and vetches clings together and is handled as easily as it very well could be considering its weight. If the crop is very heavy it is most easily handled by forking direct from the swath to the rack. If light, it might be gathered in windrows with a hay rake. One farmer in Ontario who has experimented with a mixture similar to this for the silo, loads it directly from the swath with his hay loader, thus getting the crop into the silo with a minimum of hand labor.

This crop is at its best for silage when the land is given good preparation and manured just as heavily as it would be for corn. There is an opportunity to clean the land either by summer fallowing early in the season and then sowing the O. P. V. mixture, or by sowing early and following the crop with fall cultivation. Land may be seeded down to clover or grasses with this crop quite as well as with the grain.

Ontario. F. E. ELLIS.

A great stride will be made toward the highest conservation of human energy when we learn that it is easier and better to keep folks well than to cure them when they're sick.

The Holstein Breeders' Sale Co.

Fond du Lac, Wisconsin

will sell on

October 15, 1920

80 Head of Pure-bred Holsteins 80

The new $35,000 Sale Pavilion where the Holstein Breeders' Sale will be held. "The best arranged sale pavilion in the country."

The sale will be held in our new sale pavilion, where you will be comfortable, no matter what the weather. We will protect the buyer by handling all the papers, and if we cannot secure the papers, will return the purchase price. We will sell 40 cows that will be fresh or heavy springers, 20 of them with A. R. O. records from 14 to 31.46 lbs. butter in 7 days.

Fairview Milla Korndyke 2nd, a 31.46-lb. daughter of Rag Apple Korndyke 8th, bred to Erricson's Marathon Bess Burke bull whose 4 nearest dams average 1,220 lbs. in 365 days.

Piebe Wayne Clover Lawn out of a 784-lb. dam due Nov. 3rd to King Longfield Pearl Vale. The 11 dams of the calf she is carrying will average 1,041 lbs. butter in 365 days.

A 21.73-lb. cow due in December. A 19.33-lb. cow due sale time. We will sell 2-year-old heifers due to freshen out of dams up to 26 lbs. also a fine bunch of yearling heifers. These cows are bred to some of the best bulls in the state, such as Marathon Bess Burke, Pabst Pontiac Adonis, son of Pabst Korndyke Cornflower that sold at the National for $30,000. Meadow Holm Ona Button Hartog, one of the best bred yearly bulls in the state out of a 1,223-lb. cow. We will sell 20 bulls, most of them ready for service, including 2 herd bulls. A 3-month-old son of the 31-lb. cow mentioned above and sired by a 37-lb. bull. Twin bulls out of a 28-lb. cow and sired by 37-lb. sire, 3 sons of Pabst Pontiac Adonis and 2 sons of Pabst Johanna Pontiac, 2 grandsons of Sir Pietertje Ormsby Mercedes 37th, and Johanna King Segis, whose dam was a 40-lb. cow. 2 herd bulls, one whose dam is making 900 lbs.

Catalogues ready October 1st. Sale will start 10:30 a. m. sharp. Dinner served in dining room.

West Concord Security Sale

October 19th, at West Concord, Minn.

70 Registered Holsteins 70

This is a sale of young cows and heifers, many of them due to very well-known sires this fall and early winter. They are a typy, handsome lot that will undoubtedly sell within the reach of any man able to handle pure-breds.

This is a good opportunity for the ambitious dairyman to get foundation stock at reasonable prices.

Every animal is guaranteed absolutely right.

Write for your catalog today. You will find among the entries several of interest to you.

The Minnesota Holstein-Friesian Breeders' Ass'n

406 Market Bank Building - - Minneapolis, Minnesota

Carver County Holstein Sale

October 21 at Waconia, Minn.

56 Registered Holsteins
30 High Grade Holsteins

The Holstein breeders of Carver County will hold their first county consignment sale on the 21st. The 56 pure-breds are straight, healthy, well bred stuff, some with official records, many with C. T. A. records.

In the selection of these entries, the sale committee has made every effort to make them representative of the herds of Carver County. They have selected the cattle to meet the demands of the breeder who wants clean, well bred females that will sell for average rather than extremely high prices. If you want that kind, don't fail to attend.

The 30 grades are top notch cows and heifers, most of them bred for fall and winter freshening. A great many of them have excellent C. T. A. records. All of them are the result of the use of very good pure-bred sires for several generations. Get your catalog at once from

All by King Segis Pontiac Cor-Will, 190512, whose sire is King Segis Pontiac, 44444, and whose dam is an A. R. O. daughter of Pontiac Korndyke. Also two fine young registered cows, one a granddaughter of Pontiac Korndyke. **Wm. N. Osborn, Wanatah, Ind.**

Facts in BLACK & WHITE

Ten Pure-bred Holstein Cows Against 20 Scrubs

Two neighbors, on adjoining farms—one milks 20 scrub cows—the other 10 pure-bred Holsteins. They care for their cows in the same way; they get almost the same amount of cream and the same sized check from the factory where both sell their milk. Though both men take in the same amount of money, the man with the scrubs uses the whole of his receipts to pay running expenses, while the Holstein man lays aside nearly half. Another item; The Holstein man feeds his skimmilk to pure-bred calves; the other man feeds his to scrub calves. It costs no more to raise a $100.00 pure-bred than to raise a $30.00 scrub.

YOUR CHOICE OF 30 YOUNG BULLS OUT OF YEARLY RECORD COWS

FROM AN ACCREDITED HERD—325 FEMALES

OUR HERD SIRES

KING OF THE ORMSBYS

KING OF THE ORMSBYS is sired by Sir Pietertje Ormsby Mercedes (twelve 1000-lb. daughters) and out of Spring Brook Bess Burke 2d, the world's largest dairy cow and the only cow in the World with three 7-day records above 35 lbs. butter in connection with three year records each above 1000 lbs. Her best records are 38.22 lbs. in 7 days and 1290.93 lbs. in a year.

SIR INKA PRILLY SEGIS is a 30-lb. son of King Segis. He has 84 young daughters at Winterthur; 30 have freshened and 10 of these made above 20 lbs. at first freshening. At their second freshening they are coming back with from 25 to 28 lbs. 17 of his daughters have completed semi-official records, and 12 of these averaged 757.73 lbs. butter and 19,172.30 lbs. milk at an average age of 3 y. 6 m.

SIR INKA PRILLY SEGIS

KING OF THE SADIE VALES is sired by King Korndyke Sadie Vale (the only bull with a 40-lb. dam, a 40-lb. sister, and a 40-lb. daughter) and out of a 38-lb. "Sadie Vale" cow. Both his sire and dam are out of 41-lb. cows. The five nearest dams of King of the Sadie Vale each weighed over a ton and produced over 100 lbs. of milk a day. His three nearest dams average 40.19 lbs. butter in 7 days and 159.51 lbs. in 30 days.

JOHANNA KING SEGIS is out of a 40-lb. cow and sired by a yearly record son of King Segis. The dam of Johanna King Segis was the first cow to make 541 lbs. butter in 120 days and the second to make 40 lbs. in 7 days. Johanna King Segis now has 8 daughters with semi-official records and these average over 700 lbs. butter and 18,000 lbs. milk. All his daughters born at Winterthur will be given an opportunity to make semi-official records.

THE NATIONAL DAIRYMEN'S SALE—E. M. Hastings Co., Managers, Pulaski, New York

America's Only Complete Line of Hi-Efficiency Feed Mills

FOR thirty years we have been manufacturing feed mills for the farms of America and Foreign Countries.

Today, hundreds of thousands of satisfied users attest to Letz supremacy.

During all these years, we have constantly striven to improve our product—to add to our line—to broaden its sphere of usefulness. And now, with the advent of the Letz DIXIE, the wonderful combined *re-cutter* and *grinder* above, our line is complete, including, as it does, a mill for every grinding purpose.

This means that regardless of your locality or grinding requirements, you can have a mill built for your purpose by America's best-known specialists, to do your particular kind of grinding—and a mill that does it with greater speed, ease and economy than any other known process.

Letz Feed Mills are famous for their grinding plates. These plates have thousands of keen-cutting, scissor-like edges that cut, grind and pulverize all in one operation. No process equals them in fine-cutting, light-running, durability, and capacity.

These plates are self-sharpening—grind anything grindable—are guaranteed to outlast any three sets of ordinary grinding plates.

Letz Feed Mills enable every feeder to realize fully upon the profit-advantages of feeding ground feed as compared with whole grain. In reduced feed costs and fatter cattle, the Letz Mill soon pays for itself. Every farm should have one. Investigate!

Free. Two books that every feeder should read—one, our catalog; the other, "Scientific Feeding." Write for them today. Address

Volume LX — FORT ATKINSON, WIS., OCTOBER 8, 1920. — Number 12

YOU GET WHAT YOU ADVERTISE

A Plea for Telling the Bright Side of Farming

CHARLES G. MORRIS, CONNECTICUT

SUPPOSE Jones, who runs a glass foundry, advertises for help as follows: "Wanted—Men to work in a glass foundry where they make milk bottles. The work is cussed hot. There is so much dust and smoke that the men must keep on goggles and wear heavy, dirty, working clothes. It takes a rugged man to stand up to the heat and dirt. When the men leave the foundry at the end of a shift they are pretty well exhausted and as it is a continuous business, they have to be on the job seven days a week. Applicants are sorely needed as we are always short of help." How would that do as an advertisement to bring out assistants?

This imaginary advertisement doesn't say that though the work is hot, the foundry keeps an unlimited supply of cold drinking water always available. It doesn't say that though it takes a rugged man to stand up to the heat and dirt, the foundry furnishes free a house physician who is on hand all the time and examines every employee from time to time to see that every one of them is in a condition to take no harm from the work that he must do. It doesn't say that the foundry pays the premium for the health insurance of every employee, to protect them if they do break down. It doesn't say that though the men are exhausted when their shift ends, it is an eight-hour shift only, with ten minutes out of each hour for rest and a cigarette if they choose. It doesn't say that though it is necessarily a continuous business while the work is on, the men get two full months' lay off under pay during the summer months when the weather makes glass making impractical. It doesn't say that because the work is unpleasant the pay is high.

If the advertisement was run as I first stated it how many boys would leave the farm for that glass foundry? Why should they not? Jones would have told the truth and nothing but the truth. He needs labor. His industry is an essential. If it slows down the cities will suffer, among other things, for want of milk. Jones rather appears to be entitled to special government favor in the way of getting him help, does he not?

Come back now to the farm. There is no way of selling a product like advertising it, and what is sufficiently advertised is to a large measure believed if it has a foundation of truth. How many farmers are in the habit of advertising for help in their business on the same lines as I have imagined Jones advertising his?

Take a long time to think that last question over. Read a farm paper, or two, or three. Take a pad of writing paper and write down all the names you think of where you've heard the owners of the names "knock" farming. (Mr. Editor, please leave a white space here for those who do stop to think it over, to write down the names of the farmers they can remember who advertise all the advantages of farm life in glowing terms and who never tell of the disagreeable part of farm life without showing promptly the compensating joy or offset. The space I ask for won't have to be very large.)

Now if you have done as I asked you to do, is it necessary for me to ask you why the farm labor problem is acute? In my judgment it is not because farm labor is hard. Many kinds of city labor are harder. In my judgment it is not because the farmer has to do without certain things. In the city you have to do without everything you can't pay for. You can also buy everything you need in the country if you have the money and time to get it. The farm labor problem is not acute because the life is lonely. Any farm boy who has gone to the big city will tell you that in spite of the lights and the possibility of excitement and entertainment in the city, there is no place in the world so lonely for a stranger as the city. A stranger on the farm soon finds good friends at every turn. A man may be practically alone in a city for months or years before he finds a real friend. The farm labor problem is not acute for lack of play hours or for something to do in them. Farm boys and men play differently from city boys and men, of course, but no boy in the country ever stood as city boys often stand in their "play time" on a street corner for hours with absolutely nothing to do because they don't know of any game they will be permitted to play in the street and there is nothing else to do but stand around idle unless they have the money to buy entertainment with. They are not permitted to throw a ball, they can't fly a kite, they can't so much as run a decent race or try out long jumps without making a special expedition to a park or public playground where a lot of other boys may fight them for the use of the space they need to play in.

In my judgment, the farm labor problem is not acute because the hours are long. They assuredly are long at certain seasons of the year but at other seasons of the year the actual hours spent in work on most farms is amazingly short. May I hazard the guess, and I'll allow anybody to come back at me with sworn figures to the contrary without getting mad—so long as he gives full details—may I hazard the guess that the average farmer spends less time in actual, constructive work in a year than the average man does in the city who works both with his hands and his head. I will admit that at every season of the year a long time passes between the first task of the morning and the last task of the evening, but there are at certain seasons of the year many idle hours or large parts of hours between the two.

I also refuse to credit the farmer —any more than I do the city man— with the time he spends in household duties. By specifying household du-

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Yields Increased by Good Rotation

Oats in a four-year crop rotation at University Farm, Minnesota, yielded 23.5 per cent more than the same crop grown continuously, and oats and corn, alternated, yielded 25.9 per cent more than the same crops grown on the same land year after year.

Corn grown in rotation at the station yielded approximately 25 per cent higher than corn grown continuously.

"At this rate," says A. C. Army, head of the section of farm crops at the station, "approximately one-fourth of a farm could be cropped to clover hay and still secure the same number of bushels of oats or of corn as if the entire acreage were planted to those cereals. The beneficial effect of the cultivated crop on the oat crop following was very marked."

Select Seed Corn From Healthy Stalks

The high yielding qualities of pure-bred Wisconsin corn can be maintained at their high level of productiveness by careful seed selection.

"The ears should be selected in the field from large healthy stalks," says E. D. Holden of the agronomy department of the University of Wisconsin. "Weak or sick stalks pass on these characters to their offspring. It is just as important that the ears come from good stalks as it is that the ears themselves are well shaped and healthy. The curing of the corn for seed is equally important. Seed ears hung up indoors and dried by artificial heat are the best guarantee of a strong germination and a vigorous stand next spring."

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

Hobgoblin Time

The yellow corn shocks in the field,
Like ghosts, raise waving arms in air,
And there are goblin-folk concealed,
That speed about, each rubber-heeled,
With strange low calls and flowing hair.
When dusk comes on and pale moons rise
We see the glitter of their eyes.

Each pumpkin has a sort of face
That grins at you with yellow cheeks.
And fairies, winged and full o' grace,
Along the wind-blown meadow race
Whence green has gone these many weeks.
The night is heavy with the sighs
Of autumn, as its pulse-beat dies.

Across the lawn and down the lane,
You see a wraith—a filmy thing
That sobs as if it was in pain,
Then hides behind the stacked-up grain.
It is dead summer time a'wing.
And from the north and grey-dark skies
The first frail little snowflake flies.

The Oldest Dairyman's Philosophy

Just when you begin to think that everything has gone to pot, you see a county fair with all the year's bounty, and you know that the world hasn't changed much.

Measles are purty bad, and I never cared for smallpox, but farm machinery pitted with rust has got 'em both beat.

Living in the country really begins to seem beautiful after you have lived in the city.

Mother's milk is powerful hard to beat—but a pedigree cow is a substitute you needn't be afraid of.

Jones—"How were your crops this season just past?"

Smith—"Well, we had a handsome yield of summer boarders and that prize bull of mine kept three hundred and twelve automobile picnics out of the apple orchard."

His Nightmare

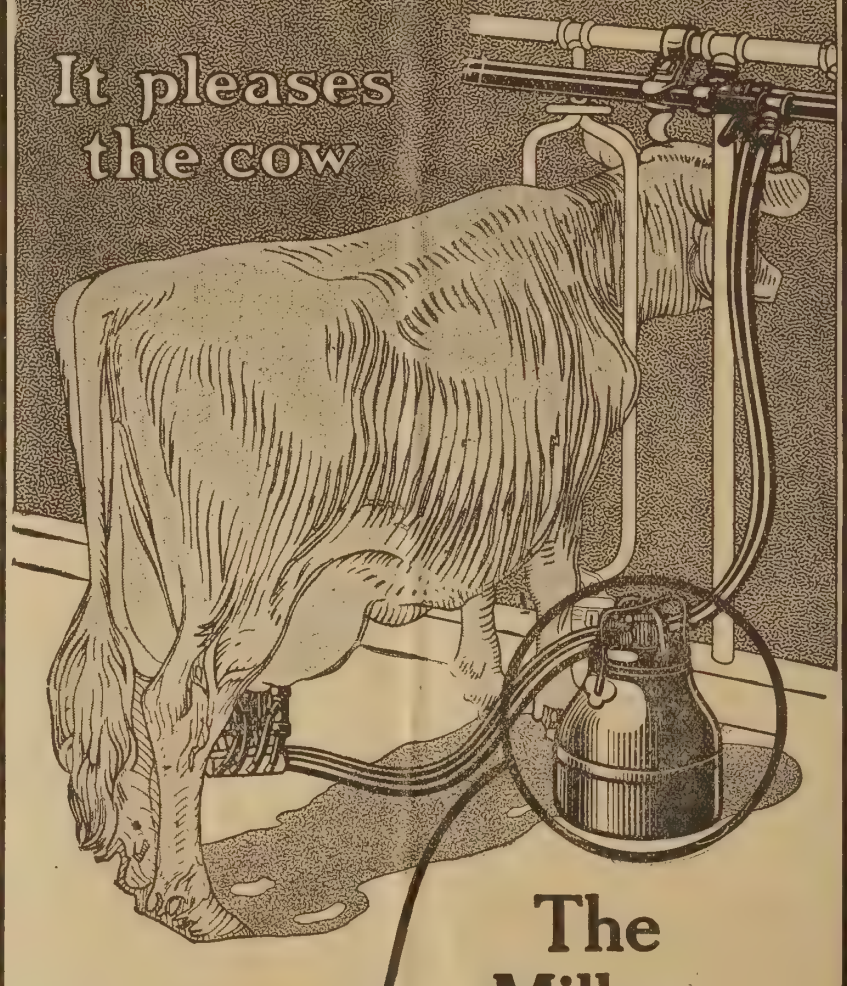
The farm hand had been given a nice room on the second floor. And at one o'clock morning, the folks down stairs heard him moaning and groaning. Farmer Brown hustled up to see what was happening.

"Hey, wake up," he called, nudging the hired man in the ribs, "you have a nightmare, I guess. What's the matter?"

"Oh, it was awful," exclaimed the hired man, rubbing his eyes and sitting on the edge of the bed. "I dreamed I got up at half past five and worked steady, right on through to six in the evening, without complainin'."

The Resting Time

The resting time is here at last,
When heavy crops and chores are past.
When barns are bulging with the hay
And every place is packed that way.
At night, get out the checker-board,
And drink sweet cider from a gourd.



The resting time is here, when we
Can go upon a movie spree,
And sign for every dance in town,
And buy the wife a nice new gown.
It pays to work because, in time,
You know that loafin' is no crime.

A Jersey farmer has made a collection of all the different bugs and slugs and beetles that bother a farmer. When you see the collection, you are willing to believe that one Irish potato is worth its weight in gold.

The oldest dairyman says that a calf has plenty of good common sense, but its legs is just naturally too weak to stand the strain.

The De Laval Milker

It pleases the cow

The Milker Pail

The De Laval Milker pail embodies several important and distinctive features, making it unusually substantial and serviceable, as well as easy to keep clean. The pail is made of sanitary white metal, with nickel-plated brass fittings. It is of sanitary design with no crevices or sharp corners where bacteria might congregate, and is heavily reinforced and protected where the wear comes — made to give long and satisfactory service as other De Laval products.

The De Laval Milker unit is designed to milk one cow at a time and the pail is therefore of a size to be conveniently handled and cleaned, and permits the keeping of each cow's individual records.

The De Laval Milker is positive and uniform in action from day to day, and it is faster, more reliable and more sanitary than any other method of milking.

Wherever cows are milked the world over, the name "De Laval" stands for quality and highest value to the user.

COW TEST COWS AT WISCONSIN

THE "Farmers' Barn" at the Wisconsin State Fair this year was crowded as never before with people who came to see and stopped to learn something of the lessons taught by cow testing associations. The exhibit this year attracted larger numbers because the lessons of common sense handling and breeding cows for economy in milk production were presented more graphically and so as to arrest attention.

The exhibit was gathered together by Messrs. Cramer, Searles, and Sutton, the men in charge of the organization and supervision of the Wisconsin cow testing associations. They had the assistance of many visiting testers and association members who gathered there, as is the way of all men interested in the same thing. The discussions of these men were a liberal education in cow management. Such gatherings not only bring instruction and information, but they create an interest in the job that is, perhaps, quite as important in any successful business.

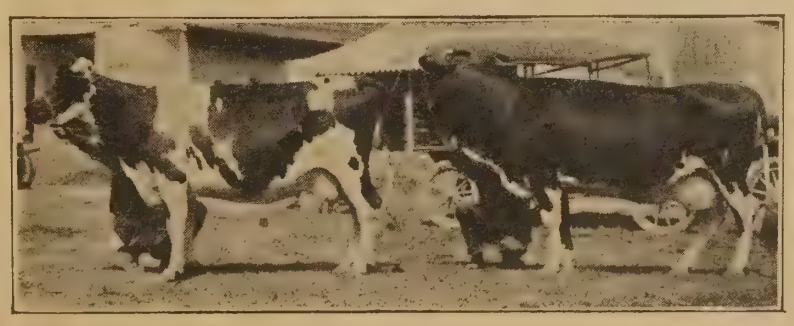
WISCONSIN CHAMPION COW TEST COW

For the second time "Aggie", a grade Holstein owned by Huenink & Lubach of the Cedar Grove Association, takes the blue ribbon for the highest producer in Wisconsin Cow Testing Associations. Her last record is 16,742 lbs. milk containing 689 lbs. fat. Did it pay to feed Aggie? It cost $277, but her 8 tons of milk brought $566, to say nothing of the value of her heifer calf and the $120 in prize money she has won in the past two years.

Five distinct exhibits were shown. These included the high record cow in association work, four daughters of a sire that increased their production over that of their dam, two cows from the same herd that showed a marked difference in production, three generations of females sired by bred-for-production bulls, and three cows with calves by their sires to indicate the value of purchasing bred-for-production calves, even though they be grades.

THEIR SIRE WENT TO THE BUTCHER

These four daughters of Eggler Mercedes, owned by H. A. Brace & Sons of the Buena Vista—Richland Association, averaged 86 lbs. fat more than their dams. This was an increase of 35 per cent that is ascribed to their sire. He was sold for beef and brought a high price ($160), yet his former owners would value him at $2,000 if they could have his services now. Who will invent a workable system to keep these good bulls in the community?



⚜

Aggie, a grade Holstein, received the blue ribbon and the $60 prize money as the highest producer last year among the 52,000 cows on test in the 115 cow testing associations in Wisconsin. Her production totaled 16,542 pounds milk containing 689.2 pounds fat. For three successive years in association work, Aggie has an average of 15,659 pounds milk containing 634.6 pounds fat. The value of her milk last year was $566 and the feed cost was $277, leaving a profit of $288 above cost of feed. During her association year she received 2 tons of alfalfa hay, 4 tons of corn silage, and 2½ tons of grain, in addition to 150 days on pasture. Her grain mixture consisted of 200 pounds of bran, 150 pounds of ground oats, 100 pounds of gluten, 100 pounds of corn meal, 50 pounds of oil meal, and 25 pounds of cottonseed meal.

This seven-year-old cow, owned by Huenink & Lubach of the Cedar Grove Association, was also shown last year as the high cow and is to be exhibited again this year at the National Dairy Show in Chicago. At this year's state fair a special exhibit booth was set aside for Aggie that attracted so much attention that the alleyway was continually crowded with interested spectators. Bales of hay, sacks of grain, a small silo, and a plot of grass were used to picture to the eye and to emphasize her large consumption of feed, while her production of eight tons of milk was driven home by the use of large milk bottles presumed to hold 8,000 quarts. It was at once an exhibit of the cost of milk production and the profits that can be realized with high producing cows.

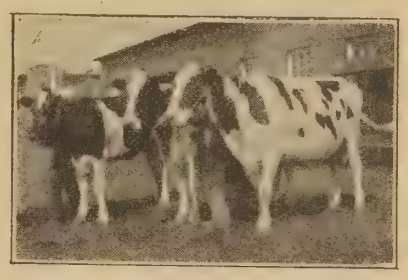
⚜

The Cedar Grove Association is proud of its record and its members believe in advertising their good cows. They made a special exhibit of three cows and three calves to illustrate the value of association records and the difference in the productive ability of cows that is not always apparent to the eye. This association is selling its surplus heifer calves on the basis of the records made by their dams, fixing basic prices for each calf and then adding a certain amount for each ten pounds of fat the dam makes above a certain minimum. This exhibit was in charge of the tester, Herbert Molter, and the owners of the cattle shown were Mrs. Van Dries, Henry Navis, Ben Wissink, C. Olson & Sons, and Huenink & Lubach. Representatives of this association were on hand at all times to talk about the exhibit and the value of cow testing association records. They distributed the annual report of the association, showing the average production of all cows for the past year to be 9,024 pounds of milk containing 329 pounds fat, with 79 cows qualifying for the Wisconsin Register of Production with over 365 pounds fat.

"BALDY" AND "CURLY"

These two cows, owned by J. Reid & Sons of the North Lake Association, were fed practically alike and were both good cows. One cow made $158 more profit over cost of feed than the other. Can you pick her?

⚜



The old story of the sire that was found out too late was illustrated by four cows owned by H. A. Brace & Sons of the Buena Vista Association. These cows averaged 82 pounds fat more than the dams, an increase of 35 per cent in production that is ascribed to the milk prepotent qualities of their sire, Eggler Mercedes. Before his full worth was known, he was sold to the butcher for $160, but if his owner had kept possession of him, he would now be valued at not less than $2,000.

"Baldy" and "Curly" were loaned by W. Reid & Sons of the North Lake Association that they might tell their story to the thousands of Fair visitors. Although these two were both good producers and were fed practically the same amount of feed, Baldy made more than twice the profit that Curly did. Here are their records:

	Baldy	Curly
Milk, lbs.	14,679	8,947
Fat lbs.	594	274
Value of fat	$438	$251
Cost of feed	$166	$137
Income over cost of feed	$272	$114

⚜

Another argument for the use of bred-for-production bulls was that of the three cows from the Allenton—Kohlsville Association. Three generations of grade Holsteins consisting of dam, daughter, and granddaughter were shown. The dam, owned by Louis Pamperin, has a record of 12,237 pounds milk containing 410 pounds fat. Her daughter, owned by John Meyer, has a record of 12,752 pounds milk containing 467 pounds fat. The granddaughter has not freshened but shows in many ways greater promise than her dam or grandam. In this exhibit, however, attention was drawn to the desirability of keeping both type and production in mind. The granddaughter lacks somewhat in type and indicates the desirability of choosing a sire that will transmit to her offspring a straight topline. This exhibit was in charge of Mr. L. Henderson, the tester for this association.

THREE GENERATIONS—DAM, DAUGHTER, AND GRANDDAUGHTER

The daughter made 56 lbs. more fat than her dam. The granddaughter is off type, probably due to use of poor type of sire.

Pasturing Alfalfa

HOARD'S DAIRYMAN:—I notice in the Dairyman a little item to the effect that experiments are being conducted to determine the injury done to alfalfa when used for hog pasture.

Here at Shadeland Farm we have about four and one-half acres which has been used as a hog pasture for six or seven years. Last year I had 110 head on it. I cut about three tons of hay at the first cutting last year, a scant ton at the second cutting, and did not attempt to cut again at all. The hogs ran there and ate the grass to the ground and then rooted into the ground after the alfalfa roots.

The hogs had the run of the alfalfa until I disposed of them in January and at that time the field looked almost as though it had been fall plowed. There was scarcely a sign of grass anywhere. I thought the alfalfa was ruined and expected to plow it in the spring and plant corn.

The next spring was very wet and our work was delayed, so I did not get to it as soon as I intended. In the meantime I noticed a film of green all over the field. The alfalfa came on nicely and the rough treatment given it by the hogs seemed to do it good. About 20 head of pure-breds run in that field this summer, have cut about four tons the first time, about three the second, and will have couple or more tons when I cut it the third time as I shall in a few days. The pigs have no doubt done it injury but the gains more than offset it.

Nebraska. E. E. CARTER.

OHIO'S CORNFIELD DAY

CLARENCE M. BAKER, OHIO

OHIO farmers have been accustomed for many years to make pilgrimages to the Ohio Experiment Station during the last week of June to view at that place plots of wheat growing in fertility experiments which are second in importance to only one experiment station in the world, that of the Rothamsted Station in England. These pilgrimages have so increased that a new annual event has been established—that of Cornfield Day. Such a day was held at the Ohio Experiment Station, September 10.

While the northern half of Ohio has produced enormous quantities of wheat ever since the completion of the Erie Canal in 1825, its importance as a corn growing state has never been lessened. The fertile river valleys of northeastern Ohio have been producing wonderful crops of corn, while, of course, the western portion of Ohio is the beginning of the great corn belt. Experiments with corn, however, have never been regarded with so much interest as that of wheat until the past few years when the price of corn had advanced materially and the problems of wheat growing had become more complicated.

THE EFFECT OF FIVE TONS OF BARNYARD MANURE ON CORN PLATS AT THE OHIO EXPERIMENT STATION

CHARLES E. THORNE, DIRECTOR OHIO EXPERIMENT STATION, ADDRESSING FARMERS ON CORNFIELD DAY

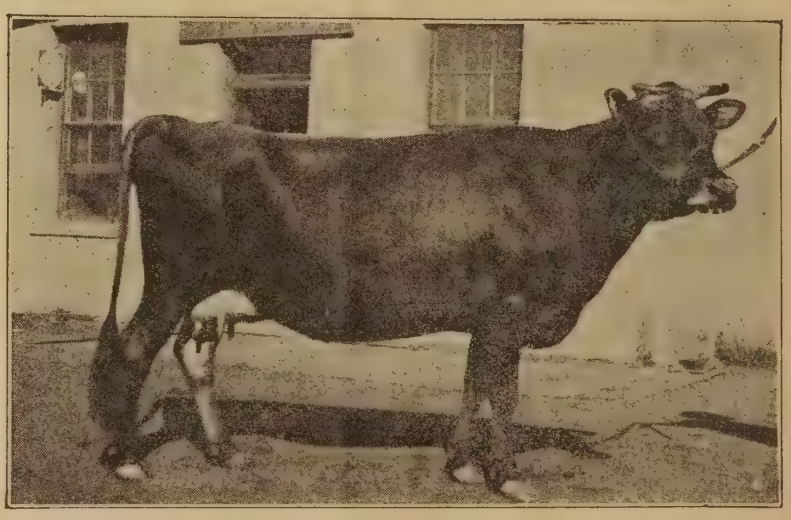
Ohio has seen a general shifting of the wheat crop to land adapted and fitted to this crop particularly, so that up to within a few years ago the corn crop was forced to take second place; but with the advance of live stock husbandry, particularly dairying, corn in Ohio has been receiving much attention.

An early record of Ohio farming shows that corn was valued from 4 to 6 cents a bushel, the bushel being figured in the early days in liquid form; that is, by the amount of whisky that it would produce. Only a few years ago corn was selling for almost $2.50 a bushel, still going to distilleries.

No other crop furnishes so much potential food as corn for the Ohio farmer. Corn supplemented with tankage makes an ideal ration for fattening hogs. Corn may also form the basal part of the ration for laying hens. When ensiled, the corn plant, of course, furnishes an excellent form of roughage for the dairy cow, while the ground grain is valuable for producing milk.

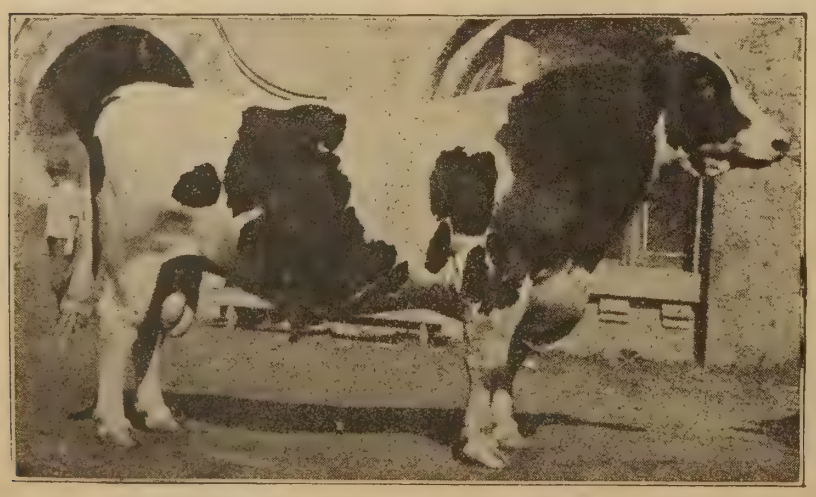
The average yield of corn in Ohio is about 34 bushels. At the Ohio Experiment Station, however, where corn is grown in regular rotation followed by oats, wheat, and clover, a field of 10 acres has averaged 75 bushels for the past 18 years. This has been done on clay loam soil with underlying sandstone rock but a few feet from the surface. The fertilizer applied to maintain this average consists of 8 tons of manure each on the corn and wheat, with the addition of 160 pounds of acid phosphate to those crops. Lime is also applied at the rate of 2 tons per acre of ground limestone to the rotation. In the spring an application of nitrate of soda or dried blood is made to the wheat to guarantee plenty of fertility

(Continued on page 491)



Kansas Shows Good Herds

FRANK M. CHASE, KANSAS



THE dairy cattle exhibit at the Kansas Free Fair, held at Topeka Sept. 13 to 18, was the best representation of the state's milk making industry that has ever appeared. This was the natural result of both the strides which the Sunflower State is making in dairying and of some well-placed breed promotion work.

Most striking of all was the pronounced rally of the Jerseys. In former years so many of the prizes offered at the Kansas Fairs went to Jersey entries from outside the state that little but discouragement was left to the home breeders. The annual Jersey show at Topeka, in fact, had come to be largely an exhibition of animals from other states. This year the Kansas Jersey breeders resolved to bring out more home breeding and, as an extra measure of their enthusiasm, to "beat the Holsteins". Though they did not quite succeed in the latter, in point of numbers, they did bring to the fair more exhibitors and more entries than ever before. The quality also was as good as in any previous year.

There were eight exhibitors, seven being from Kansas. Five of them never had shown at either of their state fairs before. The Kansas breeders practically monopolized the show, permitting but one championship to leave the state. Seventy-eight head of the Channel Island cattle were shown.

COUNTESS LAD'S ROSEBUD, SENIOR AND GRAND CHAMPION JERSEY FEMALE AT KANSAS FREE FAIR
OWNED BY R. A. GILLILAND, KANSAS

JOHANNA BONHEUR CHAMPION 2D, SENIOR AND GRAND CHAMPION HOLSTEIN BULL AT KANSAS FREE FAIR
OWNED BY U. S. DISCIPLINARY BARRACKS, KANSAS

Jerseys

Much of this extraordinary increase in Jersey interest has been due to the activities of F. W. Atkeson, who has been serving as field man for the Southwest Jersey Cattle Club, with headquarters at Kansas City, Mo., since June 1. The offering of $150 in Kansas special prizes was also a drawing card for entries. Of this amount the American Jersey Cattle Club provided one-half, the remainder coming from the fair association.

The Jersey exhibitors of Kansas were T. F. Doran, R. A. Gilliland, E. L. M. Benfer, J. T. Herold, Frank Knopf, W. R. Linton, and Dr. Parker, and LaForce Farm of Missouri. L. S. Gillette of Iowa served as judge.

The aged bull class, containing seven animals, was probably equal or better than this class at any other western state fair this year. LaForce Farm won first in this class with Oxford Majesty Gold Medal, this bull also being senior and grand champion. Knopf was second with Countess Lad's Majesty; Gilliland third on Fern's Interesting Count. An unnamed junior calf won the junior bull championship for Linton.

Countess Lad's Rosebud won first in aged cows. She was exhibited by Gilliland, subsequently being made senior and grand champion female. Fleurete's Queen and Oxford's Victress, both shown by La Force, were the second and third prize aged cows. Owl's Financial Viola, a senior year-

(Continued on page 490)

TWELVE ACRES IN ARKANSAS

R. L. FOSTER, ARKANSAS

HOT SPRINGS, Arkansas, may be noted for its hot baths, health resorts, beautiful golf links, and mineral waters, but a mile and a half north of the city lies a little 12-acre farm which is attracting the attention of all those interested in agriculture from the entire state because of the fact that it is returning a net profit of $350 monthly to the owner. The owner of the farm is Harry Jones, owner of the Majestic Hotel of Hot Springs.

Good dairy cows, pure-bred Duroc-Jerseys, and White Leghorn hens are demonstrating to Arkansas that good stock properly cared for is a sound and profitable investment. The same methods by which Mr. Jones progressed from a dishwasher in a small hotel to owner of the largest hotel in Hot Springs is making his little farm such a success. These methods are sound business principles, knowing where the money is being made, and watching for a chance to improve the business.

The twelve acres of the farm are the typical rocky formation of the Ozarks and the land is very poor. No pasture of any value is growing on the farm at present. All feed for the cows and chickens has to be purchased. This fall Mr. Jones plans to put all manure he can secure on the land and plant it to a crop of rye.

Ask Mr. Jones the record of any of his cows for any day or month since they came to his farm and he can tell you to the pound what it is. If you want to know how much it costs him to produce a gallon of milk he can tell you. He knows how much it costs to put fresh eggs in his kitchen, also that the best pork he ever hung up in his refrigerators costs him practically nothing—but that comes later in the story.

When he found that his cooks were having to break from ten to a dozen eggs to get one that would stand up and keep its eye open for "eggs up", Mr. Jones started thinking. Then one day a year ago when a poultryman was guest at his hotel and said that Arkansas could be made a great poultry state because of cheap land so well adapted to poultry raising, the thinking broke into an idea. Why not produce his own eggs? And the 12-acre farm is the result. To the flock of chickens was added a herd of Holsteins and a herd of Duroc-Jerseys. And now fresh eggs, pork, and milk make satisfied guests in his hotel each day. Although eggs and pork from the farm are not quite enough to supply the entire demand the dairy herd furnishes enough milk for the dining room and ice cream parlor run in connection with the hotel.

For the eggs and milk he pays the farm the same price as he would have to pay for these products on the local market. For his pork he pays the farm the central market prices.

A herd of 13 of the finest Holstein cows has been established within a year. Six of the cows are registered. One of the cows is Johanna Aconeth Plymouth Korndyke, who at the age of two years and four months produced 316.6 lbs. of milk and 9.195 lbs. of butterfat on a seven-day test. Bersheba Netherland Lass is another who at seven years produced 511.1 pounds of milk and 16.097 pounds of butterfat on a seven-day test.

All feed for the cows is bought. Alfalfa, cotton seed hulls, and a commercially prepared feed constitute the ration. The milk produced by the herd costs from 21 to 24 cents a gallon when retail milk is selling for 65 cents a gallon. During last April six cows of the herd prodcued 6,883 pounds of milk and one cow was nearly ready to turn dry when the record was taken.

The dairy barn will accommodate 24 head and is built for cow comfort. It is equipped with steel stanchions and has a cement floor which is washed daily. During the day the cows are given the range of a five-acre lot.

A six-month-old registered bull has been purchased. He is out of Elmview Spot Ormsby whose record at 4½ years is 579.7 pounds of milk, 22.38 pounds of butterfat on the seven-day test. The entire dairy herd is being tested for entry on the tuberculosis free accredited herd list.

Eight registered Duroc-Jersey sows and a registered herd boar form the basis for the swine herd. A veritable hog's paradise is the observer's thought when he sees the excellent care given this herd. Well ventilated hog houses, a cement wallowing hole with running water, and cement feeding floors with plenty of room for movement for the herd constitute the equipment of the hog lot.

Contrary to the opinion of many swine feeders and breeders Mr. Jones is raising his hogs on nothing but the slop and garbage from the hotel. No grain is fed except to the sows which are about to farrow. Three weeks before farrowing grain is added to the sow's ration which is continued for about two weeks after the litter comes. Garbage is hauled from the hotel twice daily. Extra care is shown that no rotten or soured material is in the garbage when fed. It is given to the hogs in steel troughs on a cement feeding floor which is washed frequently to insure cleanliness. All the hogs are in fine condition and fatten easily on the slop ration, declares Mr. Jones. He recently butchered 9,600 pounds of pork for his hotel from the herd which he says is the finest he ever brought to his hotel. The carcasses averaged 175 pounds and the best part of it was that it cost practically nothing to produce this pork as it worked what otherwise would have been total waste into money.

THESE SOWS ARE FATTENED WITH THE GARBAGE FROM THE HOTEL DINING ROOM

One of the most attractive features of the farm and the one that makes the poultry enthusiast stop his car at the gate and inspect the farm is the beautiful flock of White Leghorns. When he started the farm Mr. Jones purchased 265 hens that laid an average of 193 eggs monthly during February, March, and April of this year. Now the flock contains 500 of the best hens and 450 of the finest pullets to be seen anywhere in Arkansas. And the eggs they furnish to the hotel keep their eyes open when "Adam and Eve come out on a raft."

The present flock is still failing to supply the entire demand of the dining room as the hotel when running full capacity requires from 800 to 900 eggs for breakfast alone. But within another year Mr. Jones plans to increase the flock to meet his entire demand. All young roosters of course go to furnish the guests with real southern fried chicken dinners.

The flock, during the first six months of this year, produced eggs for 17.5 cents a dozen. The chickens are fed a specially prepared mixture, a commercial scratch feed, and bread scraps. Feed is thrown to them on a cement floor covered with straw.

The poultry house is 120 by 20 feet and built of the very best material. The building when completed cost $2,200 and is modern to the last word in poultry houses. It has a concrete floor and is divided into six units 20 feet square open front type. It is equipped with self feeding and self watering devices. The hens have quarters almost in keeping with the guests who stop at the hotel. In front of the building a young orchard has been planted. Five acres or more are available for range with an abundance of shade. Windows which light the poultry house are glass alternated with screen and equipped with canvas cover which can be drawn over the open windows in storms or bad weather.

Every fixture of the entire farm is the very best. The farm has been made attractive by the consistent color and arrangement of the buildings. From the cottage occupied by the manager, Carl Hirshfield, to the pump house the buildings are neat and well taken care of.

Mr. Jones does nothing in a slip shod manner. He says he is not yet satisfied with his farm and is going to increase his stock and make it still better. He has just purchased enough land adjoining his farm to total 65 acres which he intends to furnish to capacity. When one has become acquainted with Mr. Jones no doubt remains but that he will accomplish his purpose. Coming to Arkansas 20 years ago when Hot Springs had more gambling houses than bath houses, he has had a chance to see Arkansas come from its lethargy to take its rightful place in the ranks of the states. He is interested in farming, farmers, and farm boys and girls. He is never too busy to follow the work of the club boys and girls of the state. The club members and county agent can always depend upon Mr. Jones being behind them morally and financially.

As Mr. Jones further improves his farm and live stock, Hot Springs need not only boast of her wonderful health resort, but may also point with pride to another practical demonstration of the success that can be gained with enthusiasm and good methods.

THIS HERD OF HOLSTEINS FURNISHED THE ENTIRE MILK SUPPLY FOR MAJESTIC HOTEL AND THE ICE CREAM PARLOR OF HOT SPRINGS

STRENGTH

A High Grade Milk Can at a Low Cost

Buy "Direct from the Manufacturer" with all the economy this gives. Made from cold rolled, open hearth, velvet finished, sheet steel the CP Heavily Tinned Milk Can will outlast two or three of the ordinary kind. Interior is absolutely smooth. No seams to catch bacteria or dirt.

THE ELGIN PATTERN is a shipping can. Has Guardian bottom, patented hoopless, heavy gauge, one-piece, double rimmed Paragon cover. Will stand up under severe treatment. Price, 5 gal. $4.30, 8 gal. $5.90, 10 gal. $6.15

THE CLIMAX PATTERN is a long-lived can for delivering milk or cream. Lighter than Elgin but is strongly constructed, heavily tinned, and smoothly soldered. Has 20th Century handles, Paragon covers. Price, 5 gal. $3.80, 8 gal. $4.65, 10 gal. $4.85. All cans F. O. B. Chicago or nearest branch. *Send for Big Mail Order Dairy Catalog.* Prices guaranteed until Nov. 8, 1920.

5 gal. Climax each **3.80**

Turn Them Out

of the milk house—all the germs and insects—make it clean, wholesome, bright and sunshiny with the snow white paint that cleans and disinfects at one operation, saving you time, labor and money. Use it in the stables, poultry houses and pig pens—wherever you keep stock—to protect them from disease and to insure the "big" production that comes only from healthy, vigorous birds and animals.

CARBOLA
The Disinfecting White Paint

is a white paint in powder form combined with a disinfectant neither poisonous nor caustic, but many times stronger than pure carbolic acid. It is turned into smooth-spreading liquid paint simply by mixing with water—no waiting or straining. Can be applied to wood, brick, stone or cement, or over whitewash with a brush or spray pump. It will not clog the sprayer, or blister, flake or peel off. One gallon—one pound of the powder—covers 200 square feet. Mixed today and applied whenever convenient—on a rainy day.

Carbola kills lice, mites, fly-eggs, etc., and helps prevent the germs of contagious diseases—roup, canker, mange, glanders, white diarrhea, contagious abortion, etc.—from getting a start and spreading through flocks and herds. It is harmless to the smallest chick or stock that licks a painted surface. It makes it easier to do work that must be done and it works day and night—a constant protection for your profits.

Use It Instead of Whitewash and Disinfectants

to paint health and sunshine into the dark corners of poultry houses, stables, pig pens, cellars, garages, warehouses, factories, out-buildings, etc. Used regularly by Experiment Stations, Agricultural Colleges, and by thousands of poultry, dairy and breeding farms, because it gives good results and saves time, labor and money. Get some today—have it on hand when wanted. It doesn't spoil.

Your hardware, seed, drug or paint dealer has Carbola or can get it. If not—order direct. Prompt shipment and satisfaction guaranteed or your money back.

Uncle Sam's Hired Men Who Serve You

Dr. Wm. A. Taylor, Chief, Bureau of Plant Industry, Works Quietly, But See What Has Been Done

W. J. MADDOX

This is the fifth of a series of articles this publication is running, in co-operation with the U. S. Department of Agriculture, to acquaint our readers with the type of men who are making possible the wonderful service the Department is rendering and stands ready to render our readers, that those not now availing themselves of these services may do so.—EDITOR.

THE club itself, together with its high sounding name—Pathological Seminar—has become but little more than a memory, except in the minds of the handful of men who in the early days of the United States Department of Agriculture met at one another's homes in Washington to discuss various questions connected with their work. They were all young men, at the outset of their careers—a group destined to produce some of the foremost leaders in their respective lines of work.

Among the men who forgathered at these informal talks was a quiet, thoughtful, painstaking young fellow, fresh from the fruit country of Michigan. He brought to the discussions not only the theoretical knowledge gained from a course at the Michigan Agricultural College, but the actual practical experience in fruit growing obtained on a real fruit farm where he spent most of his youth. He was a good listener, and soon gained among his companions that confidence usually given to quiet men of his type. His comments, when he made them, were well thought out and aptly put, a characteristic that has marked his utterances ever since.

A Thorough Investigator

This man was Dr. William A. Taylor, who was to become one of the department's most efficient administrative officers, Chief of the Bureau of Plant Industry, and a man recognized throughout the country as one of the highest authorities on the growing, storage, shipment, and handling of fruits. He is known as a very thorough investigator, one who carefully weighs all essential factors before arriving at a decision.

While Dr. Taylor came to the department shortly after graduation from college, he brought with him a great store of practical farming knowledge gained as a boy, which has stood him in good stead upon many occasions in making his bureau of actual, first hand aid not only to the farmers of the country but to the people generally.

One very striking instance of this is revealed in the part played by the group of workers of which he had charge in coming to the aid of the orange shippers and the railways, who for a long time were at odds over the heavy deterioration of oranges during transit. The loss averaged about 20 per cent of the fruit shipped, due chiefly to blue-mold. The railways and the shippers appealed to the Department of Agriculture. It was found that many slight abrasions were made in the fruit in picking and handling it. At the suggestion of department specialists the sharp points on the instruments used in cutting the fruit from the trees were filed down; the oranges were cut close without stems, and workers who handled the fruit were provided with gloves. By these measures the loss was cut down from 20 to 2 per cent. At that time the orange crop was valued at about $30,000,000 a year.

JOHANNA MUTUAL GIRL, GRAND CHAMPION HOLSTEIN COW AT 1920 MICHIGAN STATE FAIR
OWNED BY MICHIGAN AGRICULTURAL COLLEGE

Among the important accomplishments of the bureau under Dr. Taylor's direction is its work to improve methods of handling, transportation, and storage of fruits, vegetables, and other agricultural products. It demonstrated the importance of precooling fruit before shipment and the necessity of shipping in ventilated cars. Its specialists worked out improvements in the construction of refrigerator cars to insure the necessary ventilation. This not only greatly reduced the cost of transportation, but also greatly lessened losses of fruit and vegetables in transit.

Notable Work With Cotton

The bureau has done notable work in the breeding and distribution of superior varieties of cotton. These have been established in commercial

DR. WM. A. TAYLOR, CHIEF, BUREAU OF PLANT INDUSTRY, U. S. DEPARTMENT OF AGRICULTURE

cultivation in different parts of the cotton producing areas to which they are specifically adapted. The most important varieties bred and distributed are the Lone Star, Trice, Acala, Columbia, Durango, Meade, and Pima. The value of this work can be realized when it is known that the present annual production of these varieties is estimated at between $200,000,000 and $300,000,000.

Among the new varieties of grain introduced and developed in this country by the bureau is the famous durum wheat. This achievement met with rapid success, and durum wheat is now grown on a large scale. The 1918 crop was estimated at slightly less than $100,000,000. Not only this, but an entirely new industry for this country, the manufacture of macaroni, for which this wheat is particularly suitable, was established.

Not Measurable in Dollars

These are only a few examples of what Dr. Taylor and the highly efficient organization of which he is the administrative head is accomplishing for the producers, and consequently for the consumers of the country. It is impossible to estimate the value of the work of the Bureau of Plant Industry to the people of the country in dollars and cents. We can point to any one case, such as that of the orange growers, and show what it meant to them to have their losses cut down from 20 per cent to 2 per cent. The immediate, obvious gain is to a very small group of interests, but there is no calculating the indirect benefits to business and the public generally. It requires nothing short of a Benthamite mathematician to reckon them. It is very much like the dropping of a stone into a pool of water. The ripples spread in all directions and their impulse is felt over a wide area. There is no telling where the commercial ripples from this pebble do not touch—the banks, the railways, the manufacturers of the many supplies incident to the business and others almost without end. With our present complex commercial life, it would hardly be an exaggeration to say that there is no line of business that does not feel the influence in some way.

The password of the bureau is "science for service". The bureau stands ready at all times to place the knowledge and labors of its highly skilled specialists at the disposal of any individual or group of citizens who seek such advice upon any subject connected with plant industry—and this covers a very wide field, indeed. It includes investigations of the causes, prevention, and treatment of diseases of plants, including fruit, ornamental, shade, and forest trees; the introduction of new varieties of plants; the improvement and utilization of grazing lands; use of irrigated lands; soil fertility; and the improvement and production of cereals. Many others could be mentioned, for the work touches plant life in all its relations to agriculture.

Heads Large Staff

Under Dr. Taylor's direction, there are approximately 2,103 employees, 868 of whom are located in Washington, D. C., and 1,235 engaged in the work of the bureau outside of that city. As occasion arises representatives are sent out to various foreign countries on exploration work in search of new plants that can be introduced and developed profitably in the United States, or to study plant diseases where there is danger of introduction to this country.

Among the important field activities of the bureau is that of investigating and studying methods for eradication of plant diseases. It endeavors to diagnose and determine the cause of new plant diseases just as soon as they develop or are introduced into the United States so that measures can be taken without delay for checking their spread or means advised for restricting their further introduction. Notable work along this line has been done with regard to diseases of wheat, cotton, vegetables, and fruit. Closely connected with this is the work of stamping out carriers of destructive plant diseases such as the common barberry which is considered responsible for the epidemics of black stem rust of wheat which so greatly reduce the crop of spring wheat in some seasons.

It is as head of a work of such scope that Dr. Taylor is in a position to place his great talents at the service of the country. He was born at

Direct Driven Blower

In the Holstein method of driving, the sprocket is connected direct to the pulley, securing the advantage of uninterrupted drive of blower should cutter head be thrown out of action by safety-stop device.

Hence the blower continues to operate after the knives stop, thoroughly emptying the spout and fan chamber of all cut silage. This eliminates the annoyance of opening up and cleaning out the blower before starting up again as is necessary with ordinary blowers.

There Are Many Other Reasons
Why the HOLSTEIN SAFETY is Superior

The Meili-Blumberg Company
Dept. B New Holstein, Wis.

Chelsea, Michigan, June 23, 1863. He was graduated from the Michigan Agricultural College in 1888 with the degree of B. S., receiving his doctor's degree from that institution in 1913. Before entering the government service he managed a fruit farm and nursery in Michigan. He entered the Department of Agriculture as an assistant pomologist in 1891 and served successively as assistant chief of the Division of Pomology, pomologist in charge of field investigations, and as assistant chief of the bureau until his appointment as chief in March, 1913.

Montana State Fair

Though the 1920 Montana State Fair at Helena on September 13—18 was an outstanding success as an agricultural exposition, the dairy cattle division gave a sharper indication than ever before that the farmer-dairymen and breeders of the state find it hard to show and keep work going on at the same time at home. Breeders of dairy cattle who attended but were not showing have expressed a determination to back up the fair with an entry list next year that shall be representative in number as well as quality of the dairy interests of the state.

There was merit and good type in the showing of Holsteins and Jerseys at the state fair. No outside herds showed. The two breeds constituted the entire exhibit. Ribbons were placed by Oscar Tretsven of Bozeman.

Holsteins

Exhibitors:—J. A. Woll, Helena Holstein-Friesian Co., Louis N. Hall, C. E. Davenport, L. B. Ryman, Albert Woolf, and Delbert Woolf, all of Montana.

The awards follow:

Bull three years or over—1, Woll on Sir Korndyke Louis Beets; 2, Helena Holstein-Friesian Co. on King Netherland Zozo De Kol. Bull two years and under three—1, Helena Holstein-Friesian Co. on Pet Ondine De Kol. Junior yearling bull—1, Helena Holstein Co. on Junior Yuka Boone De Kol. Senior bull calf—1, Hall; 2 and 3, Helena Holstein Co. on Prince Seges Mountain De Kol, King Seges De Kol Otsego. Junior bull calf—1, Davenport on Lyon's Fayne Posch Pietertje; 2 and 3, Hall.

Cow four years or over—1 and 3, Hall on Butter Dorinda Echo and Butter Echo Sadie Vale; 2, Helena Holstein Co. on Daisy Katrina Otsego. Cow two years and under three—1, Hall on Epimenthens Finsk Korndyke. Senior yearling heifer—1, Hall; 2, Helena Holstein Co. Junior yearling heifer—1, Ryman. Senior heifer calf—1 and 3, Ryman; 2, Davenport. Junior heifer calf—1 and 3, Woolf; 2, Hall.

State Fair Holstein Special—Limited to breeders who have never shown cattle at Montana State Fair—Helena Holstein-Friesian Co. for bull two years and under three, Pet Ondine De Kol.

Senior and Grand Champion Bull—Pet Ondine De Kol. Junior Champion Bull—Fayne Posch Pietertje. Senior and Grand Champion Female—Butter Dorinda Echor. Junior Champion Cow—Elsie Korndyke De Kol.

Jerseys

Exhibitors:—Roy Van Horn, Louis N. Hall, and Mable Woods, all of Montana.

The awards follow:

Bull three years or over—1, Van Horn on Mona's Noble King. Senior yearling bull—1, Hall. Senior bull calf—1, Hall; 2, Van Horn. Junior bull calf—1, Hall; 2 and 3, Van Horn.

Cow four years or over—1, Hall on Dorothy Priscilla; 2 and 3, Van Horn on Mountain Ivy Beautie and Broadwater Hillman. Cow three years or over—1 and 2, Van Horn on Lively Brookside Maid and Ivy's Brookside Rose. Cow two years and under three—1, Van Horn, on Noble King's Lamberta. Senior yearling heifer—1, Van Horn on Noble's King's April Beauty. Junior yearling heifer calf—1, Mable Woods on Martha Washington; 2 and 3, Van Horn.

Graded herd, calf herd, get of sire, produce of cow, and state fair Jersey special—Van Horn.

Senior and Grand Champion Bull—Mona's Noble King. Junior Champion Bull—Hall. Senior and Grand Champion Cow—Dorothy Priscilla. Junior Champion Cow—Noble King's Lamberta.

Chronic worry becomes acute happiness to those who are engaged in this pastime.

Healthy Grain

Seeds grow faster and mature into healthy grain when first freed from smuts by using *Formaldehyde*. This powerful disinfectant also destroys all grain rust and fungus growth.

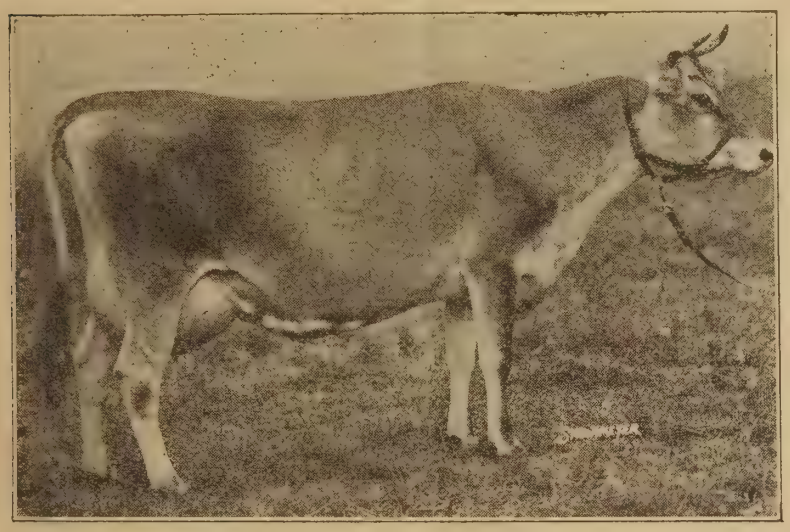
MEADVILLE, PENNSYLVANIA

Meridale Jerseys Sold

Sixty-two Meridale Jerseys sold for $49,825, an average of $803, in the farm's first annual sale, September 17. One cow brought $6,600, one $3,600, and fourteen $1,000 or more each.

T. S. Cooper paid the top price of the sale for Jap's Mertha Lass, a seven-year-old daughter of the Imported Jap and a granddaughter of Spermfield Owl. This cow has four AA Register of Merit records, the best being 15,615.8 lbs. milk containing 803.76 lbs. fat and is now making her highest production. B. H. Bull and Son of Canada made the last bid before the selling price. The Canadian farm took the second high animal of the auction, Cid's Darling, a two-year-old daughter of The Cid, with Mr. Cooper the runner up. Geo. D. Taylor of New York secured ten head for an average of $565. Mr. Cooper's total purchase included six animals averaging just over $2,000. F. H. Berger bought four head for Jersey Crest Farm, Wisconsin, for $5,100.



This was the first annual sale at Meridale Farms. The weather was favorable and a goodly crowd filled the new auction pavilion erected for this use. Here Jerseys have been bred for more than thirty years. No haphazard intermingling of blood lines has been followed, but a carefully planned program of constructive breeding. For ten years Register of Merit records have served as a guide and a measure of progress, the average of the 152 made in 1919 being 8,908 lbs. of 5.53 per cent milk, thirty-five being on cows two years old or less. There was sold in this auction some of the best production Jersey blood in America.

The attendance and the average selling price are tributes of confidence in this great breeding institution. The importation which was to be included was yet in quarantine. It was replaced in the auction by a selection of imported animals from the herd.

Owners of American bred Jerseys will find encouragement in the average reached. The top cow, for example, was bred in this country, as was her dam, though her sire came from the Island. Her records went a long way in selling her though her individuality was an important factor. Tom Dempsey said of her, "In my judgment Jap's Mertha Lass is the best cow, utility and beauty combined, that has ever been produced at Meridale Farms." But the high record blood in this sale did not bring the proportionate values with those placed on imported animals of type but without proved production. It was not fully appreciated. "Owl Interest" breeders failed to back up their convictions in bidding on a number of rightly bred animals of this family.

Tom Dempsey managed the sale and George Bain sold.

The following lists the animals selling above the average ($800) and gives their buyers:

JAP'S MERTHA LASS, PURCHASED FOR $6,600 BY T. S. COOPER, PENNSYLVANIA, AT THE MERIDALE JERSEY SALE

Brooks and Barker, Ohio	
Jap You'll Do	$1,200
T. S. Cooper, Pennsylvania	
Japs Mertha Lass	$6,600
Cid's Lady Nixey	1,000
The Cid's Karnak	2,500
Jap's Owl's Surprise	1,000
H. S. Rosenthal, New Jersey	
Pennithorpe's Patricia Imp.	$2,000
Edmund Butler, New York	
Meridale Stars and Stripes	$1,000
Oxford Carteret	1,000

National Dairy Banquet

We, the undersigned national organizations of the dairy industry representing every branch from production to final distribution, hereby join in call for a "get-together" banquet to be held Wednesday evening, October 13th, 7 p. m., at the La Salle Hotel, Chicago, Ill.

This will be the first occasion for many years when all branches of the industry have gotten together around the banquet table for a heart to heart conference and consideration of this great industry. Speakers of national prominence will be present and it will be an occasion long to be remembered in the annals of dairy development.

Every progressive man and woman interested in the development of this vital industry is cordially invited and urged to be present at this banquet. It is important that those in charge of the arrangements of the banquet be notified as early as possible for seat reservations. All are therefore earnestly requested to write the National Dairy Council, 910 South Michigan Ave., Chicago, for reservations, so that they will be received not later than October 9th, 1920.

Fifty-one New York Guernseys Average $831

New York Guernsey breeders sold 51 selected animals in their second annual sale at Henry M. Sage's Fenbrook Farm, September 18, for $42,420. Geo. M. White's daughter of Ne Plus Ultra, More Confidence, topped the auction at $4,900, going to Highlands, owned by W. H. Gratwick, New York. Five others brought $2,000 or more each and twelve sold for $1,000 or more. Wm. Flinn of Pennsylvania bought six for $5,325; H. Bailey of New York, three for $5,450; and Geo. A. Cluett of Massachusetts four for $6,100.

The average quality of the consignment was high, superior to that of the sale a year ago. Yet the average of $831 received falls short of that in 1919 for $300. Several factors accounted for this, according to consignors—"tight money", the Langwater sale following the next week, and the fact that there were fewer beginners buying foundation stock this year. Extremely low prices were reached by a number of very high class animals, most of which were not popularly bred.

A list of animals selling for $650 or more is given below with their buyers:

Chilmark Farm, New York	
May King's Chenette	$2,250
W. H. Gratwick, New York	
More Confidence	$4,900
D. F. Clark, Wisconsin	
Rosemary of Pine Valley	$675
Wm. Flinn, Pennsylvania	
King Itchen's Galore	$1,000
King's Antoinette	1,650
Linden Lass of Harbor Hill	875
Saugerties May Jewel	650
E. F. Price, New York	
Imp. Wyebrook Moss Rose	$900
H. Bailey, New York	
Lenore's Golden Glow of High Point	$2,350
Sunset of High Point	1,100
Saugerties May Clyde	2,000
Harbor Hill, New York	
Lady of High Point	$1,450
H. H. Buckley, New York	
Proud Don's Flora	$650
G. B. Agnew, New York	
Proud Don's Buttercup	$700
Broad Acres Cherry	700
Geo. A. Cluett, Massachusetts	
Katonah's Glorianna	$700
Coronation Queen of Beaver Ridge	2,100
Governor's Iantha of Onisquethaw	1,650
Saugerties May Flower	1,650
H. E. Glazier, New York	
Imp. Durrington Lily 3rd	$800
E. B. Cadwell, New York	
Esther of Trout Brook	$700

MORE CONFIDENCE, DAUGHTER OF NE PLUS ULTRA, SOLD BY GEORGE WHITE TO W. H. GRATWICK, NEW YORK, FOR $4,900. THIS WAS THE TOP PRICE AT THE NEW YORK STATE GUERNSEY SALE

Our First Silo, Thirty-four Years Ago

As the silo filling season approaches, I am reminded of that first silo of ours way back in 1886. It was on our old Wisconsin farm not far from Madison that my father, some thirty-four years ago, called us boys to one side and proceeded to talk about a silo. He told how they were able to preserve corn so that it would be succulent and green even in winter. He said that the Wisconsin Experiment Station had thoroughly tested it out and demonstrated that they could keep silage in good condition for a year or more. He also spoke about silage being a very cheap feed and one that would be most productive when acres were considered. He figured how it would be possible to get from fifteen to twenty tons from an acre of corn and that this feed was high in carbohydrates. To balance the carbohydrates he would get cottonseed meal from the South, which in those early times was a very cheap by-product principally used for fertilizer. He also told how silage could be fed with clover hay and make a splendid balanced ration. I was a pretty young boy to take much interest but I do recall that in a very short time I was nailing boards on some 2x6's set upright in the barn. As I recall this room it was something like sixteen feet square. We boarded up with matched flooring two layers, putting tarred paper between. This made a bin sixteen feet square and about twenty feet high. We had a cutter which had a short carrier. I think it would lift the feed about eight or ten feet and in order to elevate the corn to the top of this bin it was necessary to shovel onto a second platform. The silage corn had been planted in the spring and a southern variety had been used, my father having in mind that he would build a silo and, if not, the corn would make a splendid lot of forage. This corn, as I recall it, was from twelve to fourteen feet high about the tenth of September. It was on a fertile piece of ground, sandy in character, and had been liberally spread with well rotted barnyard manure. I believe it did grow fifteen to twenty tons to the acre.

Of course, the news spread through the country about this silo, for certainly it was the first one anywhere around. At filling time we had quite an audience and some good old corn raisers were in the crowd. All were thoroughly convinced that the whole thing would be a failure. They had it planned that the silage would be smoking and rot; others, that it would cause spontaneous combustion and blow up, taking the roof off the barn and such other equipment as might hang to the timbers. Others believed it would poison the stock while still others only groaned and bewailed the fact that it was a terrible waste of good corn. There may have been a few who had faith that the scheme would work. If there were

they did not make it known to me, or at least I did not hear them commenting.

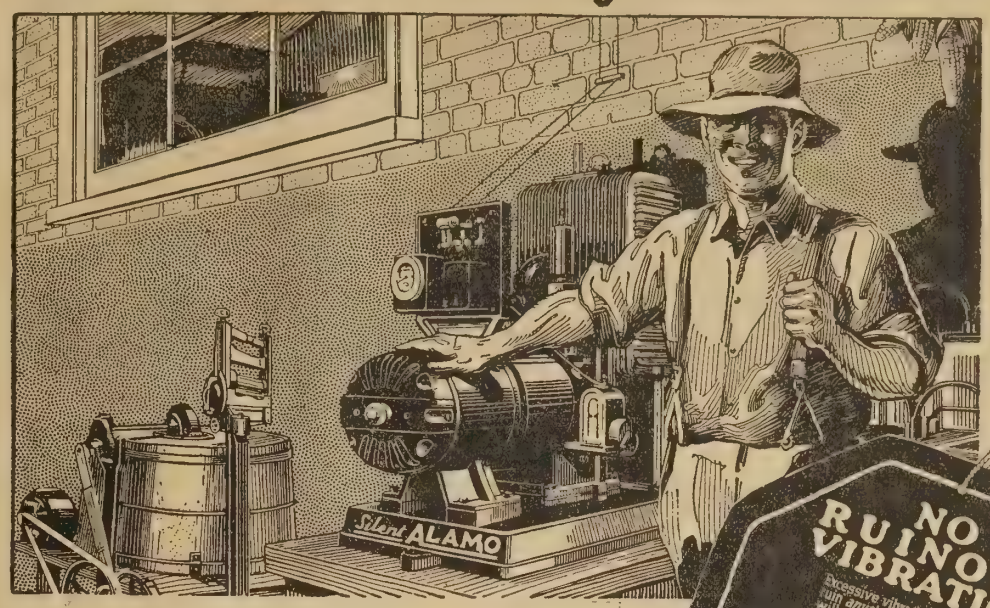
It was quite a job to fill this silo. I remember the fellow up on the scaffold had to use a scoop shovel and throw it up into the silo. We could cut faster than he could scoop and he would give out. I must admit that it was a job that required a stronger back than mind. It was easy to see that a few feet added on to the carrier would do away with two men and many slowdowns and rest periods. The corn was cut with a sled having big knives on each side. This we discovered was far superior to the hand corn knife system. The silage was thoroughly packed, mostly by boys, yours truly included, who wrestled or did gymnastic stunts on the surface. After all the corn was in we covered the top with tar paper and laid a lot of boards and lumber over this. I recall my father said the usual custom was to put on a few tons of rock but he was going to experiment and use a less weighty but more practical method.

This first silage proved to us that the silo was practical, economical, and altogether wise for the feeding of both beef and dairy cattle. We gave it a pretty good trial, wintered some colts and a mare or two, and only used a little straw and occasionally some hay. We fed several steers and produced very economic gains. Their ration was forty pounds of silage and two or three pounds of cottonseed meal per day. They also had access to good oat straw. The dairy cows received from twenty-five to thirty-five pounds and a grain ration with good clover hay. Of course, this silo did not keep the silage well. Much spoiled in the corners, but it demonstrated to us that the process was all right and it is gratifying to know that the good old state of Wisconsin now claims the use of more silos than any other state, perhaps double. I think that they are now using close to seventy-five thousand silos in Wisconsin and still it is one of the best states in the Union in which to sell silos. Though this silo experience was thirty-four years ago I am inclined to believe that from this early test we can still draw some valuable conclusions. It will take about thirty-four years more to get some men to see the benefit of the silo but they are few—practically all of the thinking, reading men of today recognize the value of the silo and know of its true worth. They have learned that it is the cheapest source of carbohydrates, which is the bulk of the ration for our animals. They know that it is best fed with some high protein feed in roughage such as alfalfa, clover, or cowpeas. With grain and concentrates it can be balanced by oil meal and cottonseed meal or bran and oats.

Improvements in machinery have made the silo much more valuable. The light tractor will soon be pulling the corn binder and I believe will elevate the corn to the wagon. The same tractor will pull this to the cutter and the cutter will cut and elevate the feed so that the heavy work will all be done by machinery. This wonderful new era which we are approaching demands that we study carefully this great feeding question and we will have to meet the present high costs of both labor and living. Machinery and economic production must be used to their limit. The cow keeper must figure carefully the earning of his acres. The summer silo is sure to replace much of our present pasture land. Fighting flies in a dry, weedy pasture is not only detrimental to the cow but is questionable economy from an acre earning standpoint. With a summer and winter silo and some good, fertile ground put into corn, and that in the silo, wonderful improvements can be made in profitable dairying.

Nebraska. A. L. HAECKER.

Work



From forge and farm and mine and bench,
Deck, altar, outpost lone—
Mill, school, battalion, counter, trench,
Rail, shelter, sheepfold, throne—
Creation's cry goes up on high
From age to cheated age,
"Send us the men who do the work
For which they draw the wage."

When through the gates of stress and strain
Comes forth the vast event—
The simple, sheer, sufficing, sane
Result of labor spent—
They that have wrought the end unthought
By neither saint nor sage,
But men who merely do the work
For which they draw the wage.

Wherefore to these the fates shall bend
(And all old idle things)—
Wherefore on these shall power attend
Beyond the grasp of kings:
Each in his place, by right not grace,
Shall rule his heritage—
The men who simply do the work
For which they draw the wage.

—Rudyard Kipling.

LIGHT *and* POWER *for the* FARM

"I would rather give up my car and keep the Silent Alamo"

On thousands of farms the Silent Alamo has become absolutely indispensable. The comfort of having safe, brilliant electric light everywhere; running water in the house and for the stock; power to operate the churn, separator, washing machine, sewing machine, electric iron, etc., etc., is such a supreme joy that almost anything else would be sacrificed.

Mr. Bipes of Brownton, Minn., puts it this way. He says: "I can, on the strength of my actual experience, recommend the Silent Alamo as the best of all farm light plants today. I would rather give up my car, and keep the Silent Alamo, realizing the many more advantages derived from it."

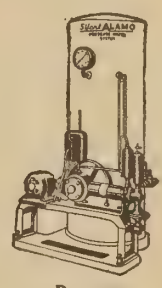
The "No Ruinous Vibration" Guarantee

Look for the tag on every genuine Silent Alamo

The wonderful efficiency and reliability of the Silent Alamo is largely due to the total absence of excessive vibration—the most ruthless enemy of mechanical things. All that terrible jarring and rattling and banging is gone. Read the "No Ruinous Vibration" tag at your dealers. It is attached to each Silent Alamo. It tells the whole story.

The Silent Alamo is so perfectly designed that it will operate efficiently without being anchored to a special foundation. Starts at the press of a button. Delivers a tapered charge to the batteries. Motor automatically stops when batteries are full. Motor automatically stops when oil gets too low—also when water gets too low.

Practically impossible to overheat or burn out a bearing. All parts fully enclosed. Has famous Ide Super-Silent Motor (Rotating Sleeve Valve.) Write us for The Silent Alamo book, also for complete data on "No Ruinous Vibration" and what it means. Write today. In the meantime, visit the local Silent Alamo dealer.



ALAMO FARM LIGHT CO., *General Offices*, 733 Tower Bldg., CHICAGO
***Plant at* Hillsdale, Michigan**

Silent ALAMO REGISTERED IN U. S. PATENT OFFICE
FARM ELECTRIC POWER AND LIGHT PLANT

This "No Ruinous Vibration" Guaranty is attached to each Silent Alamo plant. It is the most important guaranty ever written on a lighting plant.

Portable Power Stand

Pressure Water System

Electric Iron

Electrical Accessories

Any Silent Alamo dealer can take your order for the accessories illustrated here, and many others. See dealer or write us for a complete list of Silent Alamo electrical conveniences or for any special device you want.

PIONEERING ON THE PATH OF CO-OPERATION

The Story of the California Fruit Growers' Exchange

HERMAN STEEN, ILLINOIS

BACK in the early nineties there was money in the orange and lemon industry of Southern California. The foundations for many large fortunes were laid in those days. These fortunes, however, were not made by the growers, but off of them. The men best known to the receiving tellers of the banks were those whose business was to handle the fruit on its journey from the producers' orchard to the consumers' table. The growers were apparently known only to the money lenders.

The farmers had trouble enough, goodness knows, in growing the fruit, with frost, bugs, flood, drought, and a few other things to overcome. But growing the fruit was a snap compared to selling it to good advantage. The growers were 3,000 miles from the Atlantic seaboard, their principal market, and their product was highly perishable, and the best transportation service was rather indifferent; their fruit was not well established on the eastern market, and had to compete with the well known Florida oranges and lemons; the system of distribution was so inefficient that growers often had to pay the freight bills and give away the fruit. Above all, the market was ruled by speculators and commission men. The future for the growers was painted in black and mounted in an ebony frame.

Upon Sound Economic Basis

Today there is no farming industry in America upon a sounder economic basis than the citrus industry of southern California. In five years out of six, prices are secured equal to, or well above, the cost of production. The growers are prosperous and are increasing their holdings. As evidence of that fact, remember that good orange land around Los Angeles sells from $1,500 to $5,000 per acre, and a large share of the orchards pay a reasonable return upon these tremendous valuations. The consumer has not suffered, for he is today using two or there times as many oranges and lemons as he did a quarter of a cenutry ago; in fact, the consumption of these fruits is increasing year by year.

This transformation of the citrus industry from the verge of ruin to the acme of success is one of the marvelous stories of American agriculture. It is a story of pioneering along the paths of co-operation, a story of men with courage and a big idea that triumphed over obstacles that towered the skies. It is a story of success without the assistance of good luck and Heaven-sent help, except as such help comes to those with stout hearts.

Doing the Job Themselves

The big idea that saved the citrus industry was, "Farmers must do the job themselves". Out of that idea was born the California Fruit Growers' Exchange, the largest and best known co-operative marketing organization

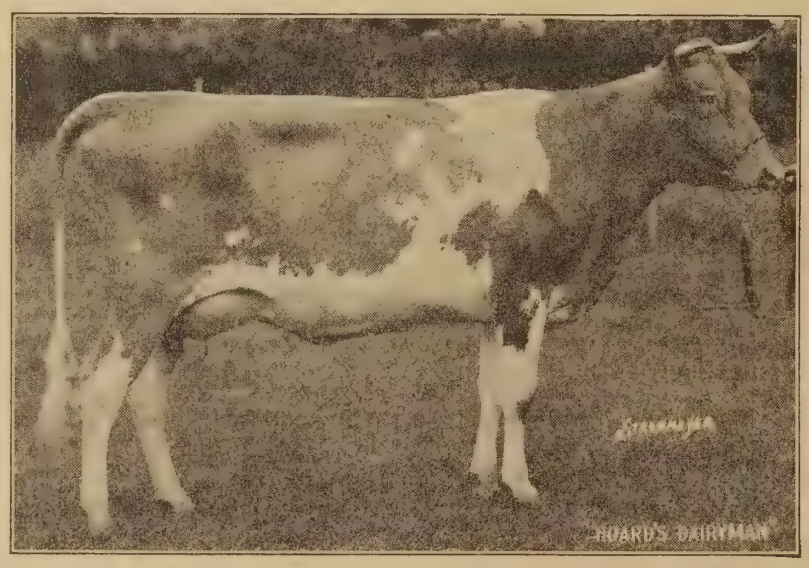
Langwater Sets Guernsey Sale Record

Fifty-one Head Average $2,865. Warrior's Get Bring $5,532

FIFTY-ONE Guernseys sold at Langwater Farms, Massachusetts, September 21, for $146,125 and set the record average for the breed of $2,865. Eleven brought $5,000 or more each and thirty-three, $1,000 or more. Twenty-six animals bred at Langwater averaged $4,120, sixteen of them being the get of Langwater Warrior and bringing the high valuation of $5,532. Eleven females by this sire netted an average appraisal of $6,438.

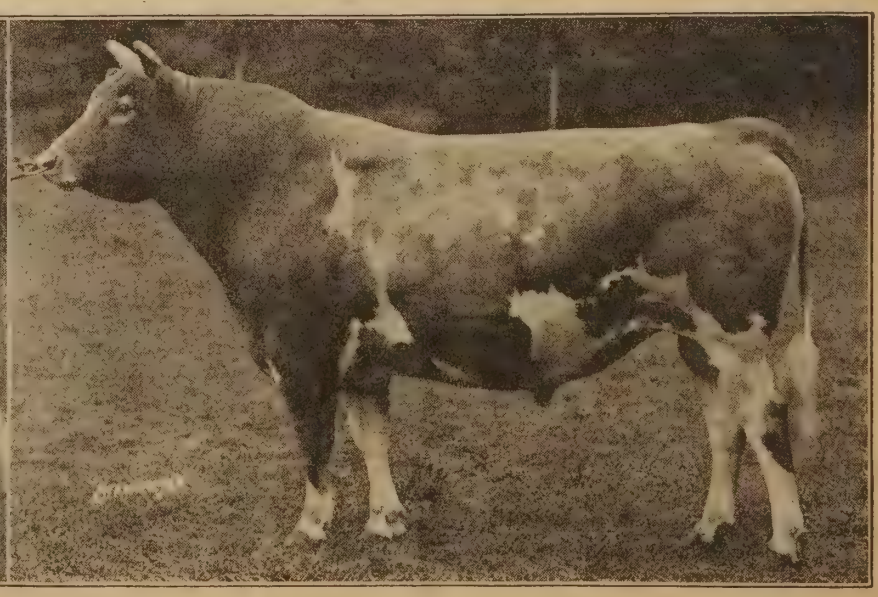


Langwater Helpmate topped the sale at $15,000. Geo. W. St. Amant of Massachusetts made that bid for a choice between this three-year-old daughter of Langwater Warrior and her dam, Langwater Heroine, a daughter of Imp. King of the May and the third cow in class D with a record of 16,221.1 lbs. milk, 805.64 lbs. fat. This sale was made after John S. Ames of Massachusetts paid $11,000 for Langwater Queen of the East by Langwater Warrior which he preferred to Langwater Cleopatra, her dam, by Imp. King of the May. The daughter has a 648.81-lb. fat, Class G record and the dam is third in Class B with a production of 15,364.7 lbs. milk, 792.51 lbs. fat. The third highest price of the day was reached by the bull calf, Langwater Eastern King, out of Langwater Cleopatra. Wm. Flinn of Pennsylvania was the successful contendor—the bid being $9,600. In each of these sales Florham Farm of New Jersey was runner-up. The New Jersey estate took three for $22,500; Geo. W. St. Amant, 8 for $31,325; Wm. Flinn, 4 for $21,000; R. S. Benson, New Jersey, 4 for $14,400; R. M. Macintosh, Massachusetts, 5 for $12,000; and E. F. Price, New York, 5 for $8,250. Langwater Steadfast, out of Langwater Dairymaid, went to Geo. A. Cluett of Massachusetts at private treaty for $25,000, a sum not included in the auction total of $146,125.

In all American live stock history few auctions rank with the 1920 Langwater sale. It was a triumph for the breeding genius of this great institution. Breeders of dairy cattle have paid no higher tribute to an individual than is constituted in the averages reached by the Guernseys F. L. Ames has so wisely and farsightedly bred. When he pinned his faith on Langwater Warrior four years ago, there were few who could foresee the excellence of form and the power of production of the get which have set price as well as butterfat records. F. L. Ames has given new proof of his unquestioned rank as the premier breeder of Guernseys in America.

L. F. Herrick managed the sale.

The following lists the animals selling for $1,000 or more and gives their buyers:



Geo. W. St. Amant, Massachusetts	
Langwater Roseleaf	$2,000
Langwater Remembrance	4,200
Langwater Crystal	1,500
Langwater Leading Lady	2,000
Langwater Gentle	3,700
Langwater Helpmate	15,000
Langwater Fortunate	2,000
Oaks Farms, Massachusetts	
Cramond Chieftain	$5,500
E. F. Price, New York	
Langwater Aurora	$2,525
Imp. Hayes Duchess VI	1,600
Langwater Mirth	2,650
R. L. Benson, New Jersey	
Cramond Dolores	$5,200
Mottled Gold of Langwater	5,000
Bull Calf No. 25	1,000
Langwater Comely	3,200
Florham Farm, New Jersey	
Langwater Syborita	$8,100
Langwater Queenly	6,300
Langwater Fairy Queen	8,100
Wm. Flinn, Pennsylvania	
Langwater Gay Laura	$1,500
Langwater Woodbine	3,000
Langwater Forever	6,900
Langwater Eastern King	9,600
R. M. Macintosh, Massachusetts	
Cramond Victor	$1,700
Langwater Alga	1,500
Imp. Alderney of Oaks Farm	1,300
Cramond Victoria	4,000
Poppy of Langwater	3,500
Hillswold Farm, Massachusetts	
Langwater Kitchener	$2,500
H. H. Buckley, New York	
Langwater Andromeda	$1,625
John S. Ames, Massachusetts	
Langwater Queen of the East	$11,000
G. L. Stone, Massachusetts	
Langwater Vision	$1,025
W. D. Mahon, New York	
Imp. Polly of the Pouchez	$1,050
H. G. Lapham, Massachusetts	
Langwater Rosemary	$5,200

LANGWATER HELPMATE, TOP PRICE ANIMAL AT LANGWATER SALE AND SOLD FOR $15,000 TO GEO. W. ST. AMANT, MASSACHUSETTS

LANGWATER WARRIOR, SIXTEEN OF WHOSE GET SOLD FOR AN AVERAGE OF $5,532 AT THE LANGWATER SALE

LANGWATER STEADFAST SOLD TO G. A. CLUETT, MASSACHUSETTS, AT PRIVATE SALE FOR $25,000 AT TIME OF LANGWATER SALE

Cow Testing Associations

RECORDS, PRICES OF FEEDS, FAT, AND MILK

Association Notes

Whitewater, Wisconsin:—This association has just finished its first six months. The leading cow is a registered Guernsey owned by H. Ridge & Sons, making 328 lbs. fat from 6,970 lbs. milk. Members that have silage show a 30% increase over those who have none. August market milk testing 3.5% sold for $3.35 per cwt. and 4c per point above. Milk retails for 14c per quart, butter for 65c per lb., and cheese for 27c per lb. The creamery paid 74c per lb. for fat. Feed prices are: Oats, 70c per bushel; bran, $45 per ton; oil meal, $66; gluten, $65.

Rock Prairie, Wisconsin:—September milk testing 3.5% sold for $3.70 per cwt. and 4c per point above. Milk retails for 16c per quart, butter for 65c per lb., and cheese for 35c to 38c. Bran is rated at $54 per ton; oil meal, $82; oats, $2 per cwt.; barley, $2.25.

Hebron, Wisconsin:—As quite a number of cows are dry or going dry at this time, the association average is at its lowest for the year. The herd of Taylor & Northey has recently passed its second tuberculin test and is now eligible to the accredited herd list. One member has installed drinking cups and several others are planning to make the same improvement in the near future.

Juniata County, Pennsylvania:—Two unprofitable cows were sold in August. Pasture in general is good and cows are keeping up a normal flow. Our county fair was held at Port Royal, September 7-10. Five members had 17 head of registered Holsteins there, taking first and second prizes in every division. One of our association bulls, weighing 2,300 lbs., has six daughters that are milking better than their dams. August market milk sold in this community for $3.97 per cwt. The creamery paid 75c per lb. for fat. Milk retails for 14c per quart and butter for 70c per lb. Feeds are listed as follows: Hay, $25 per ton; green corn, $6; corn and cob meal, $45.80; ground oats, $56.20; bran, $60—$65; cottonseed meal, $75.30; oil meal, $73; Union Grain, $82; Larro Feed, $78.

Whatcom County, Washington:—August market milk sold for $2.90 per cwt. Of the 34 members in this association, 27 have silos.

Wilson County, Tennessee:—Many members are contemplating feeding balanced rations this winter. Several unprofitable cows were sold and three pure-bred Jerseys were purchased during August. A new milk house was built and another remodeled. Feed prices are: Cow Chow, $85 per ton; Schumacher, $63; Dairy Feed, $65; oats, 70c per bushel; bran, $3.50 per cwt.; pasture, $1.50 per month. Almost all of the herds were low in milk flow, due to rains and lack of feed.

Dodge County Central, Minnesota:—Twenty-two head of cattle from the association will be shown at the county fair. During September, 33 cows were sold as unprofitable producers. The feeding of balanced rations is now being practiced by the majority of the members. The creamery paid 60c to 62c per lb. for fat and the cheese factory paid 50c to 58c. Butter retails for 73c per lb. and cheese for 27c per lb. Bran is rated at $48 per ton; oil meal, $66; cottonseed meal, $80; oats, 56c per bushel; corn, 89c per bushel.

Judges at the 1920 National Dairy Show

The men selected to judge the rings of cattle this year at the National Dairy Show do not bring any new faces into our show yard work, but a new method of judging will be introduced at this Show this year that will lighten the burdens of the judges in charge without lessening their responsibility.

Two men have been selected by the executive committee of the Show to judge each breed. One of these men is in the exact relative position occupied by the judge under the one-judge system, i. e., he is in full charge of the work and is entirely responsible for the placing of the ribbons. The other man is in an advisory capacity, it being his duty to go over the rings of cattle in each class and to be prepared for a conference with the judge at any moment on close and final judgment, or any other subject the judge desires conference upon in connection with the ring before them. Both of these men, as will be noted by the selections for the year as given hereunder, are judges of national repute, so that all exhibitors of nervous tendency, when leading their cattle into a ring of perhaps fifty or more entries, may feel such added assurance against misfortune as a second pair of eyes in the ring will afford.

A truly conscientious and competent judge is more concerned over his work than any exhibitor need be, and this method will no doubt add to his comfort; and, let it be said, the service such a judge renders is one wholly of sacrifice laid on the altar of benefit to his fellow men, and no kind of a judge other than this is ever selected to render this service at the National Dairy Show.

The Judges and Judging Program

Jerseys—Wednesday, October 13th, Hugh G. Van Pelt, Judge; John A. Lee, Advisory Judge.

Holsteins—Tuesday, October 12th, W. S. Moscrip, Judge; Peter Small, Advisory Judge.

Brown Swiss—Tuesday, October 12th, Geo. C. Humphrey, Judge; J. P. Allyn, Advisory Judge.

Guernseys—Monday, October 11th, H. H. Kildee, Judge; James Robertson, Advisory Judge.

Ayrshires—Thursday, October 14th, Judge from Scotland, acceptance not yet received, and associate yet to be named.—Publicity Department.

Always Attractive and Comfortable

YOU will find in *Martha Washington* shoes that rare combination of style, beauty and comfort which delights every woman.

You can always be sure that your *Martha Washingtons* add the desired touch of graceful style which completes an attractive costume.

Equally sure, also, that your feet will never suffer. For *Martha Washington* shoes are built for comfort and wear as well as for appearance.

Martha Washington shoes are made in all the newest styles and shapes. But be sure and look for the *Martha Washington* name and the *Mayer* trade mark on every shoe for there are many imitations of these famous shoes.

If your dealer doesn't handle *Martha Washington* shoes write us.

EDITORIAL COMMENT

A STATE dairy council in soliciting funds from the board of directors of a co-operative creamery found in the membership of the board a dairy farmer who boasted that he was purchasing and his household was consuming 100 lbs. of oleomargarine each year. He was not in favor of making any contributions to the state dairy council for the purpose of educating the people regarding the food value of butter, cheese, and milk.

It is hard to understand men who cannot be loyal to an industry in which they are engaged. Here is a dairy farmer whose income depends upon people consuming dairy products and he himself boasting that he purchases oleomargarine and is unwilling to have his creamery support an institution that is attempting to build up a better and more remunerative market for dairy products. Such men are invariably the ones who complain mostly about the price of the products they sell. They not only fail to do anything to improve their own business but actually do what is within their power to undermine it. It requires a heap of patience to tolerate men of this narrow vision.

"EGYPT"

In Southern Illinois, in the section known as "Egypt" because in the early days it produced such bountiful crops, there is an organization known as the Southern Illinois Development Association whose purpose is to institute ways and means to improve its agricultural practices. The agricultural slogan for the upbuilding of Southern Illinois is "Limestone, Legumes, Live Stock, and Phosphate Rock. We believe in Hard Roads, Better Schools, More Fruit Farming, and the Elimination of the Scrub Bulls." It has been shown by the Illinois Experiment Station that through the use of limestone, legumes, live stock, and phosphate rock these soils may be made more productive and more remunerative than they are at the present time.

In order to bring about a changed system of agriculture in any section it requires the co-operation of all men interested in its welfare. A few cannot accomplish a task of this kind. Such effort as is being put forth by the Southern Illinois Development Association can be recommended to all sections of the country. This association will not only interest itself in bringing about a better system of agriculture but it will also emphasize the importance of educational, social, and moral agencies for the improvement of the entire community. Its plan is to make the community successful, not only from the standpoint of making money, but also by creating a wholesome and enjoyable life for those who dwell there.

DAIRYING THIRTY YEARS AGO

For the past few weeks we have been bringing forward statements under the caption, "Dairying Thirty Years Ago", which were made in Hoard's Dairyman thirty years ago. The purpose of this is to place before our readers discussion, points of view, and advice as it was given to the dairy farmer more than a quarter of a century ago. Those who have read this column since it started will note that dairymen were admonished to secure better cows, to treat them more kindly and to feed them better, and urged to produce a higher quality of dairy products and to form co-operative enterprises in order to protect their industry.

It is our plan to present from week to week under the title "Dairying Thirty Years Ago" the most useful and striking statements made at that time, the purpose being to point out that the problems we have now are similar to those dairymen had at that time and, also, to show that progress has been made in the dairy industry.

It requires about a span of twenty years to note any great changes, but as we study our issues of thirty years ago we are impressed with the advancement that has been made by the dairy farmer. We find, too, that we have many of the same conditions to contend with now as then, such as the opportunity of improving the quality of dairy products and preventing outside agencies getting control of them; in short, human tendencies for selfish advancement. Undue advantages are the same today as they were thirty years ago, and in order to meet them effectively, we must have a comprehensive understanding of such forces, how they operate, and know how to conduct our business.

BELIEVE IN YOUR JOB

No one will ever attain true success unless he believes in his job and he will find little happiness unless he likes his job. To make money brings a certain amount of satisfaction but it fails to satisfy and to lead to enjoyment. Happiness and satisfaction cannot be obtained through money, power, or distinction, but rather in doing some useful work that is in keeping with the taste of the person doing it.

There is altogether too much pessimism in our country, too much fault finding, too much discontent. Why, there was never a period in American history when all classes of people enjoyed so many luxuries as they do today. It is unfortunate that we are ever comparing ourselves with the other fellow, especially of our own class or those engaged in different occupations. We too often consider the other fellow's job better because we do not know of its perplexities and irritations.

The farmer does not take enough pride in his job. He does not realize all its opportunities and too often dwells upon the job of the city man who apparently has an easier one because his hours seem to be shorter and because he wears better clothes. Such farmers little appreciate the struggle in the city, especially in the large city. The eight-hour day seems shorter but they forget to take into consideration the time expended in going to and from work, and the steady grind of the average factory man or miner, or those engaged in any other of the many trades. If the farmer would consider his freedom, his independence, the open air, and his occupation with its various kinds of work, which gives interest and opportunity for relaxation, he would be better satisfied. If he only knew it, he is engaged in a great constructive enterprise which gives opportunity for bringing forth splendid results from honest labor and intelligent thinking.

Elsewhere in this issue will be found an article by Mr. Charles G. Morris entitled, "You Get What You Advertise". It is a plea for telling the bright side of farming. It sets forth in a most striking manner the opportunity for optimism on the farm and for believing in your job, pointing out clearly some of the disadvantages of pessimism and how the farmer should consider his occupation.

CO-OPERATION AND SKILL

Since the inception of Hoard's Dairyman we have pointed out the advantages of intelligent co-operation among farmers, and have placed before our readers the advice and opinion of the leading men in agricultural thought. More than thirty years ago Professor J. W. Robertson, an outstanding leader in agricultural affairs in Canada, pointed out in an address some of the fundamentals necessary to successful co-operation. What he said at that time applies today and shows that problems now are not so different as they were then. He said:

"Too much stress cannot be laid upon the importance of co-operation. We must co-operate if we are to hold our positions in the agricultural world. When we say 'we want to go into this business', and if we say 'we can' and 'we will', when we have done that, we will have waked ourselves up to the prospect of prosperity in agriculture. We can do that by co-operation. Some men want a division. They may be correct, but co-operation is always good and always successful when it operates toward a good end. They say the farmers have no cohesiveness, and therefore they will stand apart. When farmers learn to co-operate, all the manufacturing combines and all the commercial combines that injure their interests and make our men complain of hard times will be broken up, and they will have liberty and wealth because they will have skill.

"When a man sells anything that he farms, he sells a threefold commodity—material, labor, skill, and the strength of the old sun.

"I know a man who in 1888 had 32 bushels to the acre, weighing 66 lbs., whereas his neighbor had 19 on better land, and this vast difference is traceable to the fact that his neighbor did not put skill into the soil. When a man sells hogs that weigh 250 lbs. at 12 months of age, he is not putting skill into the business. The hogs have boarded on him too long. If a man keeps the wrong kind of a hog, whose main occupation is to move around the front yard and furnish music for the family at dinner time, he is not selling skill that way; he is trying to sell squeal and squeal is unmarketable.

"It is very much harder to sell skill than to sell material, but only the things that are hard to do are worth doing, so every man in dairy farming who sells skill through these avenues, will not only benefit his land and enrich his pocket, but he will make himself a more skillful man, and the man who does that through dairying will have the highest reward."

It should be noted that Professor Robertson not only points the necessity of farmers co-operating, but that skill, intelligence, must be put into their farming practices. If farmers are to organize and pull together co-operatively they must select wise, competent, and honest leaders and they themselves must be ready to serve, to learn, and to sacrifice. They must learn how to co-operate. They must have skill.

KEEPING REACTORS

Breeders who have valuable animals hesitate to dispose of them when they react to the tuberculin test. Certain blood lines in every breed are exceptionally desirable to perpetuate, and to destroy the choicest of animals of such blood means a large sacrifice. In view of this they are led to take chances and usually the reactors are separated from the rest of the herd in order to prevent the spread of further infection. Tuberculosis is so insidious that this is a dangerous practice and has in many instances led to disappointing results. It is possible, through separation, to prevent infection from spreading from the tubercular animals to those that are clean, but it requires unusual plans and practices when kept on the same farm.

We doubt if there is one breeder in ten who appreciates the many agencies for carrying tuberculosis germs or the care that must be exercised in handling reacting animals in order to prevent the healthy ones from being exposed to the disease. On the average farm the same attendant must care for all the animals and this becomes a source for spreading the disease. If care is taken to change clothes and to disinfect hands, there would be little, if any, danger of the attendant carrying infection. In the rush of farm work it is expecting too much that a man take this precaution. Here, then, is an opportunity for spreading the infection. Rats, mice, and birds can be controlled to a certain extent, but it would require the greatest vigilance to control them wholly. Other agencies could be mentioned which would emphasize the task of keeping reactors on the same farm and without endangering the healthy animals.

The safest and best way is to establish farms where all valuable reactors can be sent. Under such conditions they can be properly handled and the danger of spreading infection from such sources would become very slight. It seems to us that breeders who have exceptionally well bred animals and desire their blood to be saved should form a company and establish a place where such animals may be kept. We do not believe it would cost any more to handle animals on this plan than to keep them in separate places on the farms with healthy herds, and it would be far safer.

Cost of Producing Corn-fed Cattle

According to the cost of production investigations conducted by the United States Department of Agriculture in co-operation with the University of Nebraska in parts of Nebraska during the past two years, the average cost of corn-fed cattle laid down at market was $14.91 per hundredweight for 2,293 head fed in the winter of 1918-19, $13.83 for 3,041 cattle in a survey study during the winter of 1919-20, and an average of $13.39 for an additional 795 cattle upon which detailed cost figures were secured during the same winter. The costs upon some droves were found to vary widely from these average figures, with the major portion going to market the first winter (1918-19) carrying an expense bill of from $13 to $18 a hundredweight, while in 1919-20 the costs of most of the cattle were between $11 and $17. The facts thus far brought out by the investigation would indicate that during the past two years, in the district covered by the survey, cattle feeding was a precarious venture, more likely to be unprofitable than not. There was an average loss per head of $3.17 on the cattle for which records were obtained in 1918-19, and of $10.69 and $14.57 on two groups for which records were obtained in 1919-20.

The greater part of the Nebraska cattle covered in the survey work of 1918-19 made their gains at a cost of from 20 to 35 cents per pound, with extremes ranging from 12 to 48 cents, while of the cattle covered the next year the greater part made their gains at from 15 to 35 cents per pound, with an extreme range at from 8 to 53 cents. While economical feeding is shown to be the major factor in the cost of fattening after the steer is bought, the investigation substantiates the fact that feeding usually plays a minor part in determining profit or loss, and that buying right and selling right are more often the controlling factors.

Feed, the most important factor of the cost of fattening the steer after purchase, was found to constitute from 75 to 90 per cent of all the expense involved in handling the steers after being put on feed. In a great number of cases the feed charges ran from 85 to 90 per cent of the operating expenses. The cost of man labor and horse labor constituted from 7 to 8 per cent.

In the final computation of net cost, allowance was made for pork and manure, two by-products of the feeding business which are credited to the steer. Under the two conditions that prevailed where this study was made, these credits covered on the average slightly more than all expenses of fattening, other than feed. Hogs can not be expected to make such a good showing, however, if ground corn is fed to the steers, or if the ration is one in which corn does not have a major place.—U. S. Department of Agriculture.

Cheese Making in Holland

HOARD'S DAIRYMAN:—The most profitable branch of farming in Holland at the present time is the making of full cream cheese for export, principally to Germany. The prices paid for this cheese are very high. Market conditions at the present time will allow cheese of inferior quality to sell at 30 to 35 cents a pound, while first quality cheese sold here last week for 60 cents a pound.

Most of the cheese exported is sent to Germany, and before it reaches the table of the German family the price has gone as high as 80 cents a pound. Holland does not understand how it is possible that a country having such a low exchange rate and that is so impoverished is still able to afford such a luxury. However, the German merchant says: "Give me the cheese, the price is immaterial."

Owing to the fact that so much cheese is exported, there is little for sale in Holland itself. Because of this condition, the government has lately restricted the amount that can be exported.

The largest part of this valuable product is made on the farm by the wife of the Dutch farmer. The big secret of the good quality cheese produced is the understanding of these farm women of what cleanliness means in their work. I have visited several of these farms and have noted that cleanliness is followed from A to Z throughout the whole cheese making process. The milk is made under the most cleanly condition and the equipment is kept in clean condition. The milkers and workers in the dairy wear clean clothes, but they are of blue cloth rather than white.

Immediately after milking, the warm milk is poured into a large wooden tub having a round bottom. The wooden tub is used because it is believed it will not give off any odor to the milk and that the wood itself keeps the milk from changing temperature quickly. The fresh milk, as it is poured into the tub, is at a temperature of about 90 degrees F. To every hundred pounds of milk there is added 8 grams (or a small spoonful) of pure rennet. There is also added 50 grams (5 spoonfuls) of a starter consisting of pure buttermilk or pure lactic acid bacteria, and an eggspoonful of cheese coloring. As soon as these three ingredients are added, the milk is stirred for a couple of minutes and then covered so as to lose the least possible heat. It is allowed to stand undisturbed until the rennet has completed its process, which usually takes about thirty minutes. After the thirty minutes is up, the cheese maker runs her forefinger straight into the curd and then bends it up so that the curd will break. If the whey is clear and not milky and if it does not stick to the finger in flocks, it is considered ready to cut.

In cutting the curd, the cheese maker uses a rake having 18 to 24 long knives set at a distance of about one-half inch apart. The curd is first cut lengthwise and then crosswise so that it is left in small cubes. This cutting is done very carefully and slowly, for unequal cutting or careless cutting will cause much loss of curd and fat. The cutting is stopped when the whey begins to rise and the curd is settled at the bottom. It is then allowed to settle for about five minutes, after which a little of the whey is removed. The cheese maker then adds as much hot water to the mass as will bring it to a temperature of 98 degrees F. In the meantime she cuts or stirs the curd with another kind of rake, in which the knives are replaced by round wires. This operation is continued until a handful of curd squeezed together will fall apart when released. The second cutting is done very carefully and as soon as the curd has reached the desired condition, it is slowly dragged to one end of the tub, which is slightly lifted to assist in draining off the whey which must all be removed from the curd.

The curd is then immediately put in a cheese vat of about two or three gallons, although different sizes are used according to the amount of milk. In this vat small holes are punched. The curd is pressed carefully and when most of the whey is expressed, a binder of cheesecloth is placed over the vat, and the vat is turned over so that the cheese falls on the binder. The corners of the cloth are carefully drawn over the top and the cheese is now ready for the press. The first pressing is applied for about ten minutes and the cheese then removed. The cheese cloth is opened up and the government brand is pressed on the cheese. It is then replaced in the press and a pressure of about 200 lbs. is applied, this being gradually decreased to a pressure of 50 lbs. Every two hours the cheese is turned. Small cheeses of about 8 to 10 lbs. are pressed for about six hours, while larger cheeses of 18 to 20 lbs. are pressed for eight hours.

From the press the cheeses are first put into a weak brine solution. After standing in this solution for six hours, they are placed in a brine solution to which a sufficient quantity of salt has been added that an egg or potato will float in it. The small cheese stay in this solution three days and the bigger ones for five days. Every night and morning the cheeses are turned and a little coarse salt is spread over the top.

From the brine solution the cheeses are brought to the curing room, which is some cool place in the farm house, where they are placed on shelves. The cheeses are turned every day and after three weeks they are sent to market. This curing period is much too short, but the demand for these cheeses is so large that the farmers are able to sell them readily as soon as they can stand handling. This kind of cheese making will produce one pound of cheese from about 11 lbs. of milk testing 3.4 per cent fat.

Exactly as the Danish LUR mark and the HOLLAND RYKSMERK serve to guarantee that butter is unadulterated and of fine quality, the HOLLAND CHEESE MARK tells the consumer the kind of cheese he is buying, or rather the quantity of fat and moisture in his cheese. Where one desires to buy a cheese made from milk from which no fat has been taken, he simply looks at the government brand and if he finds the number 45 and the name of the producer, he knows it is of the right quality. The 45 means that in the dry matter of the cheese there is a minimum fat content of 45 per cent. The government also has three other marks of 40, 30, and 20. A rigid control is exercised by the government and in case that cheese does not correspond with the BRAND-MARK, the owner is fined. Up to the present time, no fines of any importance have been applied because the farmer himself is convinced of the usefulness and justice of this system.

Holland. L. DIJKSTRA.

Washing Test Bottles

HOARD'S DAIRYMAN:—In a recent issue of your paper I noticed in Editorial Comment where a tester wanted to know how to clean his test bottles. I am a tester and, of course, ran up against the same question once.

I find that the quickest way to clean them is to put about a teaspoonful of B-B shot into the bottle and whirl them around in it for a few seconds and the brown coating is all gone. I prefer Wyandote washing powder for cleaning my glassware, it seems to dissolve the solids in milk the best of any powder I have ever used. G. M. RHEIN, Tester,
Bandon, Oregon, Cow Testing Ass'n.

Sorghum Hay Not Poisonous

I see in your editorial of Sept. 10 that second growth sorghum is poisonous. I have a piece which was cut about four weeks ago for hay, and is now heading out for second time. Please let me know if this is cut for hay before frost touches it if it would be safe to use it.

Florahome, Fla. W. H.

The danger from second growth sorghum is largely due to the fact that the growth is partially stunted and this is inclined to cause the production of poison in the plant. It is not so much because it is second growth as it is because it is grown during a less favorable season, and also that it may be hit by frost.

When sorghum, either first or second growth, is properly cured as hay or silage, the poison seems to dissipate and there is little if any danger whatever in feeding it. Pasturing of the second growth should be avoided, as it is eating it in the green state that has caused practically every case of poisoning that we have ever heard of. We consider it safe to cut the second growth and feed it as hay.

Overcoming Pasteurization Difficulties

HOARD'S DAIRYMAN:—In your issue of September 17th, I note an inquiry by B. T. D., Connersville, Ind., in regard to having trouble with pasteurized milk. This has been replied to by Professor Farrington, but as I believe we have had some of the same troubles and under similar conditions, I beg to offer a few suggestions in regard to this matter.

We have had some trouble with a cream line, but when the temperature and holding time was all right we found our trouble to be too much, too rapid, or too long agitation of the hot milk. The coil should not run too fast or too long. The milk should be heated to 145 degrees F. in at least 30 minutes and held not over 30 minutes; then, if it is immediately run over the cooler and bottled, a good cream line will be noticed after the milk has been held a few hours. We run the coil while the milk is being pumped over the cooler but try to handle the milk as rapidly as possible and we now always have a good cream line.

In regard to the pasteurized milk souring quickly. We had the same trouble. Oftentimes the milk, when ready for delivery the next morning, would be nearly turned. The trouble was our refrigeration and I believe this is one of your troubles. Our milk was at a temperature around 55 degrees F. when bottled, but it would rise from 5 to 10 degrees over night in our ice box. The temperature of our ice box ran from 50 to 60 degrees but more often it was 58 or 60 degrees than 50 degrees. We cool with water and brine in our cooler which cools the hot pasteurized milk to only 50 to 55 degrees F. We now have a refrigerator that holds at a temperature of 45 to 55 degrees F. and we do not have any trouble with sour milk. Our milk will now keep sweet 5 to 6 days while with the old refrigerator it would hardly keep sweet 24 hours. If you can not lower the temperature of your refrigerator, put cracked ice around the bottles.

If you cool the milk and keep it at a temperature nearer 50 degrees F. than you apparently are doing, then do not agitate the milk too much. You will find that milk pasteurized at 145 degrees F. for 30 minutes will give a good cream line and keep sweet a reasonable length of time.

Pioneering on the Path of Co-operation

(Continued from page 484)

in America. During the year ending August 15, 1920, it handled for its 10,500 members over $57,000,000 worth of oranges, lemons, and grape fruit. It is a big co-operative agency, owned and controlled by the growers themselves, which handles over 70 per cent of the citrus fruit of California from the growers to the wholesale distributors in the cities.

The California Fruit Growers' Exchange is a selling agency only. It does not buy fruit from its members nor from anybody else. It sells the fruit which its members produce, and turns back to them the full price secured, less only the necessary cost of selling. It makes no profit for itself. It will be well to keep these things in mind as its plan of operation is unfolded.

Local Associations Ineffective

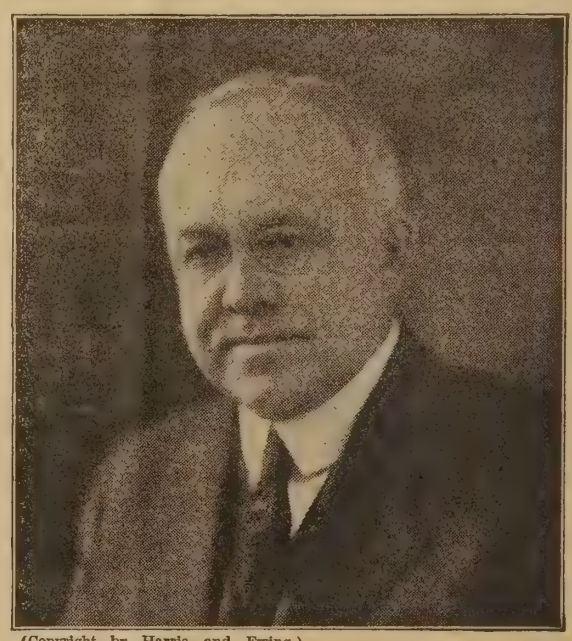
When the orange and lemon growers first organized nearly 30 years ago, they formed local associations—one for each community. These local organizations either rented or bought a packing house and prepared the fruit for market. It was thought that these local associations would solve the whole knotty problem of marketing citrus fruit.

It soon developed, however, that the practical effect of these local shipping associations was to largely eliminate the old speculators and make these associations the speculators. Because each local association operated independently, it had no knowledge of what the others were doing; the result was that the New York market might be flooded with oranges, while Chicago had none. Then came a tremendous rush of oranges to Chicago, on an over-loaded market and no oranges at New York. Under these conditions it was not hard for the speculators to break up many of the local associations.

Must Co-operate, Not Compete

The remaining associations, however, finally joined hands in 1895 in forming an overhead clearing house. "We realized that we must not compete against each other and that was what we had been doing," said F. Q. Story, the venerable ex-president of the exchange, who told me the story. "We organized the exchange so that we might work together and not cut each other's throats."

At the present time there are 218 local associations which are organized into 20 district exchanges. These district exchanges in turn have joined together in the central overhead organization, the California Fruit Growers' Exchange. Its headquarters are in Los Angeles, the heart of the citrus district; its general manager is G. Harold Powell, national and international authority on co-operative marketing.



Three Jobs, Three Organizations

Each of the three organizations—central exchange, district exchange, and local associations—have their separate and distinct work to do. The local associations own or rent a packing plant; their job is almost entirely to take care of the mechanical details necessary to get the fruit to market properly. For instance, they employ squads of pickers who take the fruit from the trees; they hire trucks to haul it to the packing houses; they grade and pack the fruit and load it upon the cars. Not all of the fruit is picked and hauled co-operatively, but most of it is because a more uniform product is thus insured.

The district exchanges sell the product. The central exchange keeps the district in various cities and provides the necessary machinery for selling. It maintains a staff of 89 salaried agents in the principal market cities whose business it is to sell the fruit when it arrives on the market. Every district exchange, however, has the final word whether it will accept the price offered, so the agent gets the best bid available and notifies the exchange, which accepts or rejects.

Can't Fix Prices

"We do not fix prices on oranges and lemons, simply because it is impossible to fix prices on a perishable product like ours," said Powell, in reply to a question. "We do attempt to stabilize prices, however, by holding shipments off of glutted markets, and by marketing approximately one-fifty-second of our product each week. Should the whole market be glutted, we would simply ask our members to suspend picking for a short time. Oranges and lemons do not have to be picked at any one time, but may stay on the tree for a considerable time. I want to emphasize that we do not attempt in any way to fix prices, but we do succeed measurably in stabilizing the market by using the means at our command."

(Copyright by Harris and Ewing.)

G. HAROLD POWELL

The chief purposes of the organization, according to Powell, are to eliminate speculation in citrus fruits at the expense of the growers, and to reduce the cost of distribution. Naturally, these two things act to the benefit of the growers. "We have no quarrel with the speculators and middlemen," said Powell. "We have no antagonistic speculators, but they have been eliminated simply because we have found a cheaper and more efficient way of doing business. We did not organize simply to put those fellows out of business, but to do better business ourselves than they were doing. If they have been forced out, it is their fault, not ours."

Eliminating Speculators

The first great step forward by the California Fruit Growers' Exchange was when it worked out the system

of delivered selling. It did away with the practice of selling oranges in California, because that was the very thing that induced speculation. This struck one group of speculators a body blow. Next it eliminated brokers in the big market cities and substituted salaried agents. This eliminated another group of orange and lemon speculators. The exchange now and for many years past has sold in carload lots to wholesale fruit dealers, who in turn distribute to the retail trade. Several officers of the exchange whom I questioned stated that they did not anticipate going farther into the trade than they already have, unless it should prove necessary for them to do so.

"Owing to the perishable nature of our produce, we can not exercise arbitrary control over it, even should we so desire," said Powell. "There is preserved complete and free competition between individuals and between local associations. Our exchange simply finds the market and gets together all the available data on supply and demand; we furnish this to every separate local association. Every man reserves the right to pick his fruit when he wants to and to sell when he wants to, though we may advise what to do. As a matter of fact, our records show that approximately one-fifty-second of the crop is delivered each week, a factor which is absolutely necessary in stabilizing markets."

Pooling the Crop

The pooling system is employed in dividing the proceeds from oranges sold. Each local association handles this to suit its members. The principle of the pool is that every man receives the same price for his oranges as another man does, provided they are of equal quality, regardless of the time sold or the price received. In other words, all the receipts go into a common treasury; when all the oranges are sold, the money is divided among the members in proportion to the amount of produce.

Some associations have a yearly pool; that is, all the oranges of one crop are pooled together. Growers receive a payment each month as fast as money comes in for oranges sold. When all the oranges of the year are sold, a final payment is made. Others have a new pool every month, and final division is made every 30 days of the money received for the oranges handled during that time. There are many kinds of pools in the orange and lemon associations; the method of handling these is rather complicated to an outsider. This principle can be made clearer in discussing nonperishable products like raisins, and will be left until next week's article.

Contracts with Growers

The California Fruit Growers' Exchange has a contract with each of its 10,500 members binding them to deliver their products to it. These contracts cover a 20-year period, and may be revoked if notice is given during a certain season. "It is highly necessary for a co-operative marketing organization to have its members bound to deliver their products to it for sale," said Powell. "Lack of this feature has killed many co-operative agencies in California. Our contract has been upheld in the courts. On the other hand, a co-operative society must have a deeper loyalty than that—a religion of co-operation among its members, if you please,—but the contract is an absolute necessity."

Formerly the California Fruit Growers' Exchange was a capital stock corporation, as also were the district exchanges and the local associations. "It is fundamentally wrong for a co-operative agency of any sort to have capital stock," declares Powell. Several years ago the change began to be made to the non-profit plan of organization without capital stock, and most of the associations and exchanges are now on that plan. A levy on sales is made to furnish the capital needed to operate. This keeps the working capital in proportion to the business done by the individual. A certain amount is retired each year also—usually that which was paid in the fifth year before. This point will be discussed more fully in a special article on financing co-operative associations which will appear later in the series.

Advertising "Sunkist" Fruit

As soon as the California Fruit Growers' Exchange was strong enough to stabilize prices to a reasonable degree, the citrus industry began to be profitable. Then came a period of increased planting of trees and consequent increased production. It is simply another illustration of the fact that the easiest way to secure large production of any product is to insure fair returns. After a time the shadow of over production hung over the growers. It was warded off for many years by efficient distribution of fruit.

In 1907 the exchange embarked on a brand new experiment by starting on an advertising campaign in Iowa, where the virtues of "Sunkist" oranges and lemons were extolled. A 40 per cent increase in consumption resulted. From that modest start grew the present system of advertising "Sunkist" oranges and lemons all over the United States. Nearly $500,000 annually is spent on advertising. "This has justified itself in many ways," commented Powell. "It has kept consumption well ahead of production and has been the very backbone of our success."

Fundamentals of Co-operation

Powell is a man of business, whose kindly philosophy on co-operation is known the world over. "The harsh method of big business cannot be applied to a farmers' movement," he told us. "Co-operative marketing has a creed all its own. There are certain fundamentals which must be observed in any producers' co-operative organization, whether in California or Nebraska.

"First of all, it must be founded upon economic necessity. It must begin in a small way and must not proceed faster than its members. Producers must stick together and have a high degree of loyalty to the organization and to each other.

"Next, a co-operative agency of producers must be owned, managed, controlled, and financed exclusively by producers. There can be no combination of growers and distributors or of growers and consumers. Their interests are fundamentally divergent. The capital contribution should be kept as nearly in proportion to use made of the organization as possible. It should be literally an industrial democracy working in business, therefore all members should have an equal vote, regardless of the amount of stock held.

Producers Only

"The membership in a co-operative marketing organization must be producers exclusively. Producers are the only ones with an interest in the land. Others sooner or later try to dominate it, and capitalize its success. The one-man, one-vote, rule is of equal importance; it is based upon the equal voting power of men. It gives confidence to small producers.

"A co-operative organization must be held together by the benefits to its members, not by compulsion. We are

Training For Service

What science and engineering have done to develop the mechanical efficiency of the telephone, specialized training has done in the development of workers.

Plant engineers, linemen, directory clerks, toll operators, equipment installers, electrolysis engineers, trouble hunters, line repairmen, test table operators, chief operators, contract agents, building engineers, line installers, exchange repairmen, plant inspectors, trouble operators, fundamental plan engineers, draftsmen, estimate clerks, exchange operators, cable testmen, equipment inspectors, wire chiefs, traffic engineers, galvanometer men, cable splicers, facilities engineers, surveyors, information operators, switchboard installers, accountants, testmen, supervisors, station repairmen, equipment engineers, directory operators, statisticians, appraisal engineers, routing operators and scores of other skilled employees are specially trained for the exacting work of providing telephone service.

Throughout all work of telephone construction and operation there is a ceaseless endeavor at mastery of service that makes for improvements beneficial to the public.

HOLDEN Lime and Fertilizer Distributor

Handles All Kinds of Lime Rock and Fertilizer Spreads 75 to 10,000 Pounds Per Acre.

The only successful lime and fertilizer distributor—saves time, labor and money. Handle fertilizer only once by hauling direct from cars to field. Patented Auger Force Feed—*attaches* to any wagon—*no holes to bore.* Spreads evenly 16½ feet wide, on hilly or level land. Simple and practical; no clogging or caking possible. Built strong—will give years of service. Hopper is level with bottom of wagon. Low in price.

Guaranteed To Handle Wet, Dry or Lumpy Lime (In Any Form), Commercial Fertilizer, Phosphate, Gypsum, Wood Ashes, Crushed Shells, etc.

Put this distributor to every test—you run no risk. The Holden Lime and Fertilizer Distributor is guaranteed to do all that is claimed for it or you may send it back and your money will be refunded. Thousands now in use—a proven success in all sections of the country. Write TODAY for full particulars.

DEALERS WANTED

The Holden Co., Inc.
104 Olive St., Peoria, Ill.

WISCONSIN—We were not in hopes of getting our land ready this year for sowing alfalfa, but thanks to your spreader, the work was quickly done. FRED PABST,
Owner Pabst Stock Farm,

TEXACO TRACTOR OIL ★ THUBAN COMPOUND ★ HARVESTER OIL ★ AXLE GREASE

TEXACO
MOTOR OIL

There is nothing that takes the joy out of motoring as quickly as an engine that overheats—and then knocks and sputters.

Improper lubrication may result in these symptoms, in which case they indicate that a hard sticky carbon is interfering with correct firing.

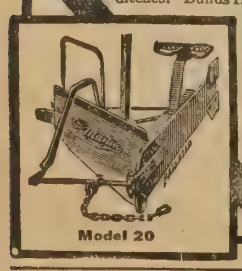
With the proper grade of TEXACO MOTOR OIL in the crank case and the proper fuel mixture, most of your motor troubles will vanish. Your motor won't balk because TEXACO MOTOR OIL won't form hard destructive carbon.

It is a carefully manufactured, clean oil with splendid lubricating body that effectively holds compression. TEXACO MOTOR OIL is made in four grades,—a range that will adequately meet the needs of any kind of motor. You may know that you are getting TEXACO MOTOR OIL by the Red Star and Green Ton every can.

THE TEXAS COMPANY, *Petroleum and Its Products*
General Offices: Houston, Texas. Offices in Principal Cities.

"There is a Texaco Lubricant for Every Purpose"

DO YOUR DITCHING NOW



You imperil your next year's crops, your next year's profits, if you let fall and winter rains stand on your land. Give your land a chance to keep breathing. Do the farm ditching and terracing **now.** Do it the quickest way, the cheapest way, the easiest way.

Use the Most Rapid Farm Ditcher, Terracer and Road Grader

THE Martin O.D.&G.Co.

All-steel—Reversible—Lasts a Lifetime. Cuts a V-shaped open-drain, irrigation or tile ditch down to 4 feet. Cleans old ditches. Builds farm terraces, dikes, levees, and grades roads. Works in any soil — wet or dry. Does work of 100 men the old way. Write for free copy of valuable Drainage, Irrigation and Terracing Book and Special Introductory Offer.

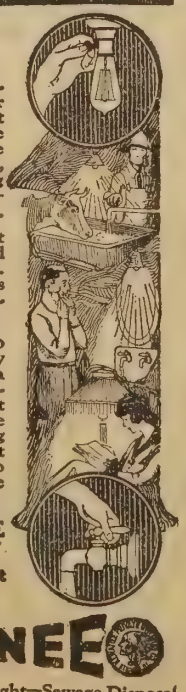
Modernize Your Farm



Own Your Own Electric Plant

Install a small, compact Kewanee Lighting Plant in your farm home. Have brilliant light in every room, in the barns, in the yard. Operate churns, cream separators, electric irons and washing machines with electricity—costs only a few cents a day.

The Kewanee Lighting Plant is simple—easily understood by the inexperienced man. Quickly installed; requires very little attention throughout a lifetime of service.

Kewanee engineers have also perfected a Water Supply System—a Combination System supplying both running water and electric light—and a Kewanee Sewage Disposal System. Among the hundreds of different styles, you will find one to suit your exact needs. Write today for free booklet.

Kansas Shows Cood Herds

(Continued from page 476)

ling shown by Gilliland, was junior champion female. Gilliland also won first in aged and young herds and in produce of dam, the latter being on the produce of Laddie's Golden Viola. Doran showed the first and second prize calf herds, also winning first in get of sire on Celia's Owl of Dornwood.

Holsteins

Eighty-five entries, shown by 13 exhibitors, constituted the excellent Holstein show. The feature of the Holstein exhibition undoubtedly was the herd of 23 head shown by the Holstein-Friesian Association of Kansas. In this group are the pick of the Kansas herds. They were chosen at the beginning of the present fair season by Professor J. B. Fitch of the Kansas State Agricultural College, to represent the Holstein interests of Kansas at several state fairs and national dairy exhibitions. That the herd is a worthy one has been fully evidenced by its winnings. Thus far it has been at four state fairs—Missouri, Iowa, Nebraska, and the Kansas Free Fair—and has won sufficient prize money to defray the expenses involved. It has made nearly a clean sweep of the firsts and championships at all of these fairs. From Topeka it was taken to the Kansas State Fair at Hutchinson. After this fair a few of the animals will be returned to their owners, but the majority of them will be retained in the herd to be shown at the Dairy Cattle Congress and at the National Dairy Show.

L. S. Gillette was the judge of Holsteins at the Kansas Free Fair. The exhibitors were the Kansas Association; Leavenworth County Holstein Association; H. L. Cornell, B. B. Davis, and Union College of Nebraska; F. A. Barney, D. W. Beers, J. Lee Harrison, David Coleman & Sons, L. E. Edmonds, S. Segrist, John H. Stephenson, and Chestnut & Sons of Kansas.

Johanna Bonheur Champion 2d, 26 times a grand champion, had no difficulty in winning this place at the Kansas Free Fair. This bull, which weighs about 2,600 pounds, was exhibited by the Kansas Association. He was bred by Chestnut & Sons, but is now owned by the Colony Farm, U. S. Disciplinary Barracks. The junior champion bull was the senior yearling, U. S. Korndyke Homestead Segis, which was also shown by the Kansas Association; he is owned by C. W. McCoy.

Irene Sarcastic De Kol led an excellent class of eight aged cows, going on to the senior and grand championship. This was another triumph for the Kansas Association, the breeder being George Appleman. Union College won the junior championship on an unnamed junior calf. In the groups the Kansas Association won all the firsts, except in calf herds and produce of dam. These went to Cornell and Coleman, respectively.

Ayrshires

The Ayrshires showed a good increase in the size of the exhibit over last year. In 1919 there were two Kansas herds at the Topeka exhibition. This year two Kansas herds were present and two from other states. The exhibitors were: A. B. Williams & Son, Kansas; Gossard Breeding Estate, Kansas; Stephen Bull, Wisconsin, and C. H. Peverill, Iowa; H. W. Cave, Kansas, was the judge.

Bull won first in aged bulls on Friendlesshead Victor, but yielded the senior and grand championship to Peverill on the two-year-old Cavalier's Choice Goods. The senior and grand champion female was Bull's aged cow, Craighley Ada. The junior female champion was a senior yearling, Rosebud Stonehouse Lucy Yet, shown by Peverill. Peverill won first in all the groups except in senior herds, where Bull led the field.

Guernseys

Two Iowa exhibitors, Mountain Bros. and Dairyland Farm, provided the Guernsey exhibit. Cave also judged these cattle. Mountains won first in aged bulls and the senior and grand championships on Kitchener's Express. All the other championships fell to the same exhibitor, Lydia's Express of I. being junior champion male, Ingleside Pretoria Vrangue, senior and grand champion female, and Kitchener's Pet of I., junior champion female. Mountains also won first in all the groups.

The excellent show of dairy cattle was the feature of the live stock department of the fair. Good quality was exhibited in the horse stalls, though in the horse pavilion was considerable spare room for other animals. While strong, the beef cattle

show was about "average" in point of numbers. Despite the untoward hog market conditions, the pens for swine were well filled, probably indicating that the Kansas hog raisers, or at least the hog breeders, are not entirely discouraged. Doubtless the bumper corn crop that is impending in Kansas also had something to do with the material evidence of swine interest seen at Topeka.

Better conditions for a successful state fair than those attending the recent exhibition at Topeka could not have been ordered. It has been an extraordinary crop year for the state. Rain has been plentiful throughout the growing season, as testified by the good crops of wheat, other small grains and hay, and the fine corn prospects. With the arrival of "fair week", the rain ceased, with the result that the state's agriculture was shown at its best and huge numbers of its people turned out to view the exhibition. The attendance, estimated, ranged from 20,000 to 75,000 daily, it being likely that from 250,000 to 275,000 persons viewed the fair this year.

Ohio's Cornfield Day

(Continued from page 476)

for testing wheat varieties on these plots.

The increase alone in the corn crop from the use of 8 tons of stall manure, reinforced with 40 pounds of acid phosphate to the ton, amounts to almost 35 bushels of corn, or equal to the average production of the state alone. The average unmanured yield in the check plots is just a little more than 35 bushels, so that it has been possible to double the yield of corn by careful handling and reinforcing the manure applied to this crop. While yard manure reinforced with acid phosphate is not so valuable as stall manure, yet the increase per acre amounts to 31 bushels.

The stall manure untreated in any manner brings increase of 23 bushels over the average unmanured yield of 35 bushels and yard manure treated, 19 bushels. The corn has paid a handsome profit for the application of manure and fertilizers, but what about the wheat following the corn? Here we find that the wheat following corn in such treatment has averaged 28 bushels per acre, the increase due to the fertility treatment being about 14 bushels which is entirely clear profit.

Director Thorne, who has recently returned from Europe, states that the average yield per acre of wheat in England is about 30 bushels. This high yield as compared with Ohio has been brought about by the careful use of animal manures and fertilizers. On the Rothamsted Experiment Station an average yield of 36 bushels of wheat has been maintained by the application of chemical fertilizers for 77 years, while the average unfertilized yield for this period has been but 7 bushels. The English experiments show that it is possible to feed the wheat crop entirely with chemical fertilizers, while the Ohio tests go a step farther and show that it is possible to fertilize the corn crop—the great potential food crop of the farm—and still maintain an average production of 28 bushels of wheat to the acre over the expense of fertilizing the corn.

Ohio's Cornfield Day led farmers into a greater sphere than that of simply growing more corn to the acre.

M. D. Lincoln, executive secretary of the farm bureau federation, outlined the program that Ohio farmers expect to carry out within the next year. They are to present before the legislature a bill providing for collective bargaining. They will also be instructed to enact just tax laws to get a "truth in fabric bill" and to regulate the manufacture and sale of ice cream to some extent, as some ice cream now sold in Ohio contains less than 1 per cent of cow cream.

Ohio farmers pay more freight bills than any other industry in the state and there is need that the farmer get his feet under the table when national laws affecting his activities are made. It will be necessary, according to Mr. Lincoln, to conduct a thoroughly good educational campaign in the state in which the city people ascertain how some of the food products are grown and prepared. "Country people read city newspapers," declares Lincoln, "but city people never read farm papers."

Charles E. Gunnels, of the National Farm Bureau Federation, brought out the fact at this meeting that approximately 30 million farmers grow all the food for 100 million people, 70 million being engaged in other industries. After the Civil War, there was a great decline in the price of farm products, due largely to the fact that much more land was brought under cultivation. If a similar decline is not to follow the World War, a certain amount of national legislation and other influences are necessary to hold the price of farm products at a profitable point of production. The farmer needs a social wage so that he can secure the necessities of life.

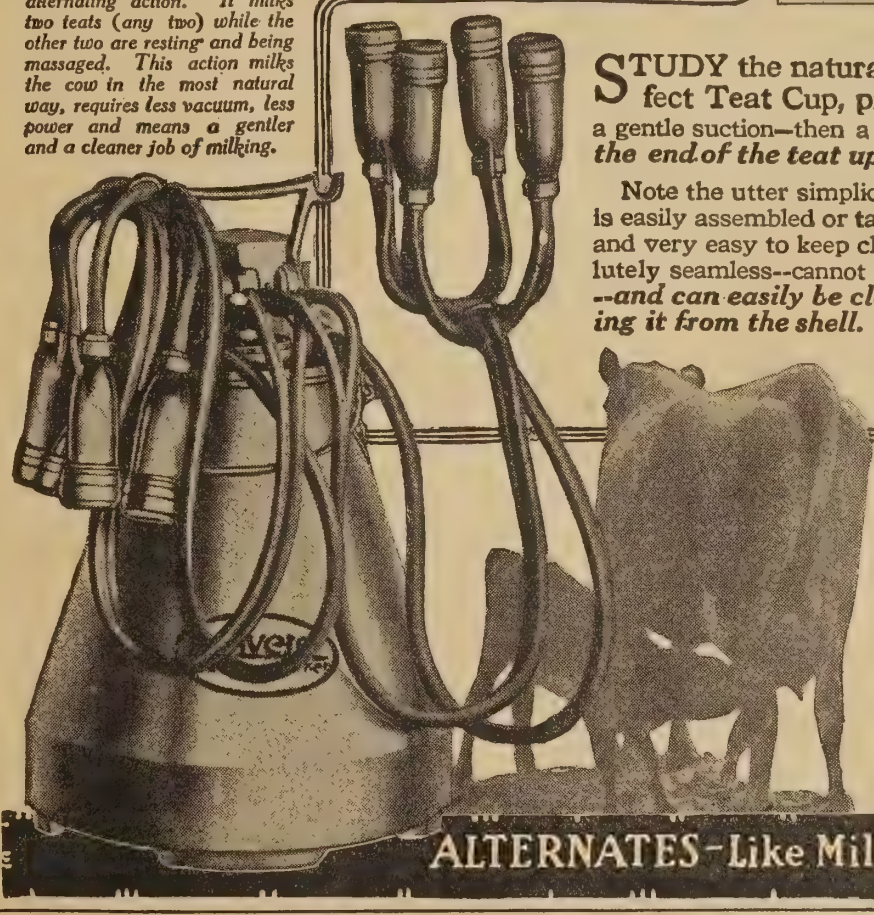
Dean Vivian of the Ohio College of Agriculture explained the system Ohio adopted following the passage of the Smith-Hughes Vocational Agricultural law, which establishes vocational teachers in many of the centers of Ohio's agricultural sections. Ohio has 70 Smith-Hughes teachers who are now planning and offering four-year high school agricultural courses for country boys and girls.

Praises Account Book

A young Sheboygan County farmer told me the other day that he liked the Wisconsin Farm Record Book because it made it easy for him to keep his farm accounts in order during the year, and greatly simplified the matter of reviewing his year's work at the end of the season, relates S. W. Mendum of the agricultural economics department of the Wisconsin College of Agriculture.

"I have kept records ever since I began farming," he said, "but I did not have any system in them. I set down things as they came along one after another. Everything was there but it was in a regular 'mess' and it was a discouraging job to go through the memoranda, the calendar, the bill file, and bank books at the end of the year and get any ideas out of them. I saw one of the Wisconsin Farm Record Books at the Farmers' Institute nearly two years ago and took to the idea at once. I got one by writing to the college of agriculture and started in. I did not realize the value of the inventories at that time so I did not fill them in that first year, but the arrangement of the receipts and expenses by enterprises was a big help. In the book I got this year I have all the inventories set down and can see at any time just how each account is running. I want another book for next year."

Who rises every time he falls will sometime rise to stay.—WILLIAM C. MORRIS.



After All—*You Can't Improve on Nature*

---and that's just the reason why, in building the Universal Teat Cup, we first made a most careful study of Nature's ***original*** milker--the sucking calf. And the result was--a teat cup that ***actually duplicates this natural sucking action.***

Universal
natural milker

The natural, alternating action of the Universal --the simplicity and absolute reliability of the machine--these are the secrets of the unqualified success of this famous, natural-action milker on the thousands of high class dairy farms where it is being used daily.

The Universal milks with an alternating action. It milks two teats (any two) while the other two are resting and being massaged. This action milks the cow in the most natural way, requires less vacuum, less power and means a gentler and a cleaner job of milking.

UNIVERSAL-the one Real, *Natural* Milker

Milking
A gentle, calf-like suction in the teat cup. This soothing action is what draws the milk.

Massaging
--then a massage, from the end of the teat up---the exact action of the calf's tongue.

STUDY the natural action of this Perfect Teat Cup, pictured above. First a gentle suction—then a soothing massage, ***from the end of the teat up***--the real calf action.

Note the utter simplicity of this Teat Cup. It is easily assembled or taken apart without tools--and very easy to keep clean. The liner is absolutely seamless--cannot collect dirt and bacteria ***--and can easily be cleaned without removing it from the shell.*** At the top is a rubber ring--soft, like the calf's nose--no cold metal to touch the cow.

Your dealer will be glad to demonstrate this famous natural milker. See him. Or write us direct for a catalog and vitally interesting booklet, "The Truth About Mechanical Milking."

The Universal Milking Machine Co.
888 Mound St. Columbus, O.

ALTERNATES-Like Milking With Hands

Producers Favor League Plan

HOARD'S DAIRYMAN:—Rumors are rife these last days of September in the dairy sections of New York. Today an authority on milk who has not always been too friendly to farmers and the League, told me about condensed and evaporated milk in this country. He stated government figures to show that there is not too much of these products in the country. He also brought out figures in relation to butter and cheese showing less holdings than is usual. Then he added, "They are out for your scalp this time, and don't you forget it." We have felt all along since the trouble with the dealers commenced to appear, that trouble might be avoided if the dealers should wish it.

This same person, known by many milk dealers and producers in the state, went on to say that there will be a settlement before the first of October. I wish I could agree, and must admit that it is possible. There is a propaganda going and this may be a specimen to get producers off the track. Personally I do not think that the trouble can be avoided although it is possible that some milk will be bought. If some buy and others close their plants it is a move that will tend to cause the League to collapse. Therefore we must accept the pooling plan and get into the League Co-operative Association. Will it be accomplished? I am writing this on the eve of our own attempt to line up the local League and I confess I am not so sure about our own success as every candidate seems to be of his election.

I have no inside formation on the subject but it seems to me that if the manufacturers of milk fail to buy that the League plants will be likely to manufacture all the condensed and evaporated milk that they can. They own a number of pans in the various plants and can make a lot of condensed and evaporated goods. They can place this on the market at a fair profit and outsell the parties who wish to hold the price to that charged on high sugar prices. A new plant at Syracuse will be ready to help out on this and, together with the other plants, can relieve the fluid situation. The cheese factories in the state can open again since they had closed for the winter. Butter will be made in many places not accustomed to so doing. The League may dry some milk and there will be many outlets for milk. It is not at all dark even tonight. The moon shines through a little.

Since writing the above, I have attended two meetings where the pooling problem has been taken up and have received reports of several others. In no case have the farmers been inclined to turn the project down unless it may be in one place. From there I have conflicting reports. The plan is regarded as the only alternative. If the scheme goes through all right as it now seems the milk dealers will have the satisfaction (?) of knowing that they put it through. It is only under compulsion that we act with energy in these matters. If it goes there is every probability that the dealers will hardly have another opportunity to make a great stir in these matters. In one meeting that I attended a vote was taken by roll call and only nine voted no. In the other, so far as I could determine, every man signed the contract to pool.

It is very freely predicted that entire satisfaction cannot be secured by this method, yet the confidence in the League management is shown decidedly in the attitude of the farmers. It is all very proper that the farmers discuss all acts of the League management. There can be safety in no other way. It is necessary that the management should know what the members desire and are thinking. They are no less concerned about the element of satisfaction than the farmers. Much complaint is likely if the plan is adopted. We all admit this. Yet some such method is certain to be required if we ever get away from these ever recurring contests such as have been so prevalent the present year. It may be due in part to the agitation and disturbance all over the country, and for that matter it presumably may be due to the same or similar causes as other contentions. No one wants to stand a large share of the losses that seem to be coming to business and labor, and must come to farming as well. We think that a large part of it, so far as farming is concerned, is due to the unwillingness of dealers to stand their share of the losses.

One speaker affirms that the milk dealers are not good sports. They have played the game and apparently have made some mistakes. One firm is reported to have had 32 cars of sugar of forty to fifty thousand pounds on the track at one time and that sugar was of the high priced kind. They thought to protect themselves by buying heavily. They bought and have lost and now instead of following Ford and dropping prices they propose to shove the loss over on the farmers and save their bacon. They propose to stop manufacture for they can this time make money in that way.

New York. H. H. LYON.

Firm Feeling is Reflected in Cheese Markets

Further Slight Advances Made During Week—More Condenseries Suspend Operations

[Report by U. S. Bureau of Markets]

Further slight advances under a continued firm feeling were features of the cheese markets during the week ending September 25. Prices at Wisconsin primary markets advanced the first of the week and temporary weakness the middle of the week was followed by immediate recovery due to active selling. Distributing markets also shared in the generally firm condition of the markets. Consumptive demand was reported good, with speculative interest not altogether lacking, but not of particular influence.

The announcement that a number of additional condenseries will suspend operations about October 1 on account of the unsatisfactory condition of the condensed milk market is of more than passing interest just now. Rumors point to an increased production of either butter or cheese in certain parts of New York and Wisconsin, which are important production centers. Whether the milk will be utilized for butter or cheese will, of course, depend upon comparative prices. With butter hovering around the 60-cent mark, however, plants properly equipped to make butter probably will do so.

Poor Quality Cheese Marketed

This possibility is further favored because of difficulties experienced in locating competent cheese makers. Already some cheese of questionable quality has reached certain markets from plants which are temporarily making cheese without the supervision of a competent cheese maker, and the product is not the most desirable property.

The situation from the statistical standpoint seems to warrant a strong outlook. Receipts at the four principal markets are still over 20,000,000 lbs. less than last year. Storage stocks in the same markets are also lighter than last year by approximately 7,000,000 lbs., and the shortage under the 1919 holdings is growing larger each week. On October 1 this shortage will probably be close to 8,000,000 lbs. as compared with a shortage September 1 of but 2,500,000 lbs. Furthermore, stocks last year were increased during September, while this year they are showing a gradual decrease each succeeding week. With this decrease in stocks with southern trade beginning to pick up materially, and with a favorable outlook for export trade, a good many dealers share in the opinion that markets are in a comparatively strong condition.

The average wholesale prices on American cheese, style Twins, for the week ending September 25, were as follows: New York, 27.6 cents; Chicago, 26.5 cents; Boston, 29.5 cents; San Francisco, 32.8 cents; and the Wisconsin primary markets, 26.5 cents. For the corresponding week last year the average prices at these markets were: 30.2c, 28c, 31.4c, 34.4c, and 27.6c respectively. The receipts of cheese at these markets were 3,539,736 lbs., as compared with 4,206,604 lbs. for the corresponding week last year and 2,877,590 lbs. for last week.

New York Butter Market

NEW YORK CITY, SEPTEMBER 28—During the greater part of the past week, trading was decidedly brisk, particularly in butter of high quality. There was some demand for 90—91 score butter, but the greater demand was for butter that would score 92 or above. From Monday until Thursday there was a price advance of 2c on top firsts, extras, and higher scoring butter but undergrades showed no increase. The result is a wider range of values than has obtained at any previous time this season. It is decidedly peculiar that the consumer, in spite of his constant grumbling because of the high cost of living, is satisfied with nothing but the best quality of food products. A high first is a very good quality of butter and very edible and wholesome but it is in only mediocre demand. As a result of the peculiar condition there is a constant accumulation of butter of from medium to low quality with no prospect that it will move in the near future.

Receipts are gradually increasing but the quality of the butter being received is very irregular, only a small percentage of the daily receipts being of the fancy variety. The increase in receipts is in part due to better weather conditions in sections of the northwest where drouths have prevailed for some time and also in part to increase in production of butter in New York State because much of the milk that formerly went to supply condenseries is now being converted into butter at up-state creameries. A large butter production is predicted for the fall and winter months because of improved fall pastures and also because herds have come through the summer in excellent condition.

There continues to be a considerable importation of foreign butter, as small shipments are arriving each week from Denmark and shipments of considerable size from Argentine. During the past week 2,870 casks of Danish butter were unloaded at this port, while 18,181 boxes of Argentine butter were received. The Danish butter varies in quality to a considerable degree and much of it arrived in moldy condition. The Argentine butter is mostly storage butter and is of poor quality generally. Some of it will score 90—91 points and is being held at an asking price of 51@52c. The lower quality is selling at prices of 47@48c. It is expected that Argentine butter will be quite a factor in this market later in the fall as the Argentine winter is just now breaking and quantities of fresh butter will soon become available. There are many who feel that large quantities of Danish butter will soon be reaching this country because of the lowered value of Danish exchange, as Danish exchange took a sudden drop during the past week.

On Monday of last week, the market showed evidences of marked strength and extras were quoted at 60c. On Tuesday, there was great activity in fancy butter and the price advanced 1c. That was followed by advances of ½c on each Wednesday and Thursday. With the decline of activity on Friday a weak undertone developed and has continued since that day. However, there was no change in quotations until today, when, because of lack of buying interest, the price receded 1c. Established quotations today are: Extras (92 score), 61c; higher scoring than extras (93 score or higher), 61½@62c; firsts (90—91 score), 55½@60c; firsts (88—89 score), 51½@54½c; and seconds (83—87 score), 48@51c. W. B. LIVERANCE.

New Jersey Holstein Breeders Organize

New Jersey, a small state in terms of square miles, but large in terms of Holstein enthusiasm, is the eighth state to organize for the employment of a state secretary.

The organization campaign recently completed consisted of a series of ten meetings covering the entire state. President Aitken of the National Association and R. C. Pollock of the Extension Service of the National Association, assisted the New Jersey breeders in their campaign.

Professor Regan, head of the Dairy Department of the New Jersey Agricultural College, and J. W. Bartlett of the Dairy Extension Service Department deserve much credit for the success of the organization work. With the assistance of Regan and Bartlett, Jacob Todd, Jr., secretary of the present organization, A. H. Bullard, secretary of the Salem, Cumberland, and Gloucester Association, and S. B. Roberts, the New Jersey Holstein breeders will be able to perfect a strong state organization.

The New Jersey breeders have organized on a three-year plan, with a membership on the basis of $1.00 per head for pure-breds and 25c per head for grades. This plan met with the unanimous approval of the breeders and as a result of the ten meetings, September 13 to 23, inclusive, the State Association raised a budget of $5,000 per year, or $15,000 for the three years. This amount assures the employment of a secretary. However, the executive board expects to raise an additional amount of $2,000 per year before November 1st.

New Jersey with only twenty-one counties, fifteen of which are interested in Holstein cattle, is evidence of the Holstein spirit which prevails.—R. C. POLLOCK, Extension Service.

Milk Producers to Meet

Milo D. Campbell, President of the National Milk Producers' Federation, has called the annual meeting of the Federation for Oct. 12th, 13th, and 14th to be held at the Morrison Hotel, Chicago.

This will be at the time of the National Dairy Show, affording members and milk producers generally an opportunity to attend both.

Questions of deep interest and concern to the industry will be considered.

There is no substitute for thoroughgoing, ardent, and sincere earnestness.—DICKENS.

First—
Miss Shepherd sang: "In the Gloaming." The New Edison stood on the stage by her side.

Then—
She suddenly stopped singing. The New Edison took up her song, and continued it alone.

185 Times-No difference!

This test was made by Miss Betsy Lane Shepherd in 185 cities and towns of the United States and Canada. The 185 audiences aggregated more than a hundred thousand people. Each audience found itself absolutely unable to tell when Miss Shepherd was singing—and when the New Edison was RE-CREATING her voice—except by watching her lips.

This is a most phenomenal achievement. Merely one such comparison makes an extremely difficult test for a phonograph. Indeed, it is so difficult that no other phonograph or talking machine manufacturer dares to make this comparison.

Mr. Edison subjected the New Edison to more than 4000 such tests, with over 50 different artists, before more than four million people, because he wanted to prove that perfect Realism was an everyday performance with the New Edison.

What does this mean to you?

Test the power of this wonderful Realism on yourself!

WHAT is your musical hobby? What kind of vocal or instrumental music "gets" you most quickly?

Is it a sweet voiced soprano?—a soul stirring violin?—a jazzy orchestra?—or what?

If you'll tell your Edison dealer, he'll give you a wonderfully fascinating test—the "Personal Favorites" Realism Test. It will tell you something you've long wanted to know—whether the New Edison brings you those particular beauties and makes you feel all those fine emotions which you experience in listening to your favorite living artists.

THIS test is really a test of the power of the New Edison's Realism. Do you know what Realism is—what it does?

A most interesting demonstration of what the New Edison's Realism can do, took place at Dallas, Texas, on April 26th, 1920, where Miss Shepherd gave her 185th test.

Miss Shepherd, who is a famous concert soprano, stood beside the New Edison and started to sing:

"In the gloaming, oh! my darling—"

With a soft, rounded loveliness, the beloved melody filled the auditorium. Pulsing through its theme was the soul of a great artist. Its message, warm with understanding, old yet ever new, reached the hearts of the hushed listeners and sped their imaginations back to cherished memories.

It was the magic of music!

Suddenly Miss Shepherd's lips went absolutely still. But her lovely voice went smoothly on—

"—it was best to leave you thus—"

The audience was puzzled. Then it awoke. Miss Shepherd's voice was now coming from the New Edison—and no one had been able to tell the difference between the living voice and the RE-CREATED voice.

The power that enabled the New Edison completely to baffle this audience was its Realism.

Edison's Realism had put into the RE-CREATED music all the magic of the living voice with which Miss Shepherd charmed her listeners.

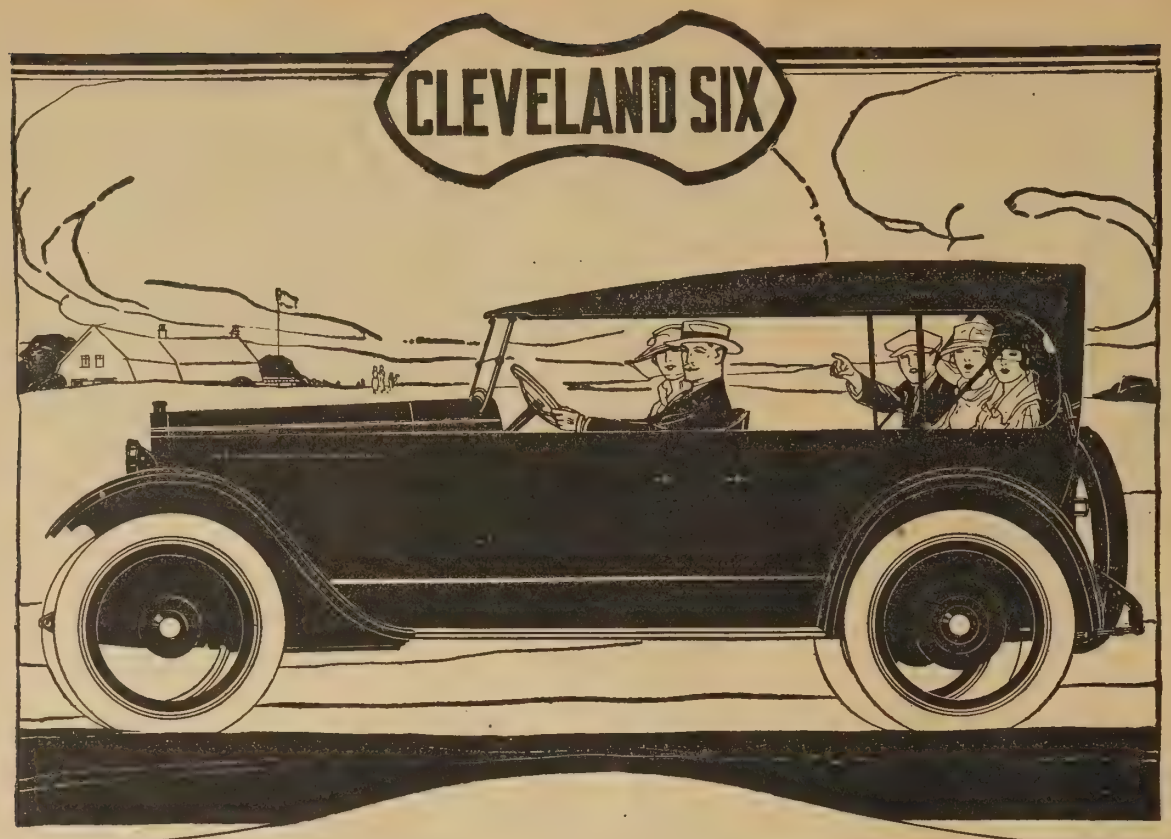
YOU love fine music. You want your home to enjoy it! You want your children to get its cultural benefits. But where you live may not be convenient to the opera and concert centres.

Mr. Edison has long appreciated your desire—your situation. Other music lovers were in the same position. So Mr. Edison concentrated his life's greatest effort upon perfecting the phonograph. He spent seven years and three million dollars in research work.

What he strove for, was recently told by Mr. Edison himself:

"The ordinary phonograph, as we have known it, falls somewhat short of conferring upon its owner all of the pleasure and benefits that can be derived from good music. The greatest shortcoming of the phonograph was its lack of Realism, and it is this shortcoming which I have sought to overcome. The result is a degree of Realism in our present phonograph which is baffling to even the most expert ears.

"I have been quoted as desiring to see a phonograph in every home. What I actually want to see in every American home is music, so realistic and so perfect in its rendition as to be an unending source of benefit and pleasure."



NOW you see what the New Edison's Realism is, and what it does. You're pretty certain that this Realism can bring the magic of music into your home. But Mr. Edison wants you to assure yourself on this point. He wants you to test the power of that Realism on yourself.

Watch for the advertisements of your local Edison dealer in your newspaper. See when he is ready to give the "Personal Favorites" Realism Test. Take the whole family along when you go to hear it.

If you prefer, write us direct and we'll send you a special ticket, addressed to your nearest Edison dealer. This will entitle you to have a private test.

The Cleveland Has Made Good Because It Is So Good

Offered to the public with no weird claims, sold only for what it is, a better car of really unusual qualities, the Cleveland Six has won a place of marked distinction among light cars.

In a year's time this better car has gone into daily use in the hands of over fifteen thousand owners, and today the satisfaction of those owners, expressed to their friends and neighbors, is multiplying Cleveland ownership.

Featuring the Cleveland is the exclusive Cleveland motor, the most advanced design of the over-head valve type, quiet, flexible and alive with power. Long underslung springs, positive brakes and ease of control are features of the sturdy chassis upon which are mounted four handsome, dignified and splendidly upholstered and finished styles of body.

Touring Car (Five Passengers)	$1435	Roadster (Three Passengers)	$1435
Sedan (Five Passengers)	$2445	Coupe (Four Passengers)	$2345

(Prices F. O. B. Cleveland)

There are Cleveland Six dealers in more than 2000 cities and towns. There is one where you live or nearby. Arrange to see the Cleveland. Catalogue mailed on request.

Have you talked with your neighbors about subscribing for Hoard's Dairyman? Why not do it now? Make up as large a club of subscribers as you can and send them in.

Dairying Thirty Years Ago

Taken From the Issue of Hoard's Dairyman of Oct. 10, 1890

An enraged bull at Valpariso, Ind., notwithstanding he had been dehorned, mortally bruised John Swanson, his breast being smashed to a jelly. His wife had her leg broken and came near sharing the same fate in trying to rescue her husband. Taking the horns off doesn't always endow the bull with a meek and quiet spirit.

⚜

It is about time we quit trying to fool ourselves with the idea that we can take very bad taints and almost rottenness out of filthy milks by the use of aerating machines, separators, curd mills, extractors, or submerged creamers. Easily moved, volatile oils and flavors can be held in check, removed by aeration and manipulation, and neutralized by development of acid in cream, milk, or cheese curds, but that which is really far on the way to the bad, or unmistakably "filthy, will be filthy still," as saith the Scriptures.

⚜

It is hardly conceivable to "live Yankees" that there should be still in good old Scotia persons who think they can write down and talk down the business of selling live stock by weight instead of by guess; but it is a fact, nevertheless, that the butchers are throwing cold water on the use of what they call over there the "weigh-bridge", but which we call platform scales. The Farming World says the butchers inspire the opposition to the end that they may go out among the farmers and "guess" off the weight of their cattle for less than they would weigh.

In this country, the man who would inveigh against the use of the "weigh-bridge" would make himself as ridiculous as to deny the use of locks on safes and bank vaults; or as ridiculous as the man will make himself who opposes the testing of pooled milk "in the good time coming".

⚜

The Southern Live Stock Journal has a correspondent who says he has a neighbor, an Alabama cow doctor, who decided an ailing cow had the "hollow tail" and he split it and put in some soot, salt, and black pepper and tied the whole up in a rag! This is the nineteenth, almost the twentieth century. Still we have the same kind of mind that groped in the darkness of the 11th century. Well does the veterinary editor of that paper hit off such benighted superstition. We can just barely remember seeing an old "hoss doctor" do that "way back" when our home was in New York State.

⚜

We are glad to learn that the live dairymen of Missouri have met and organized a state dairymen's association and propose in the hereafter to keep step with their brethren in dairy states in advancing the great interest.

They have a soil and climate well adapted to the purpose. Eternal corn does or can reign there as flourishingly as it does in Iowa or Kansas, especially if it has the cow to help it along—and where corn is almost indigenous to the soil, the cow or any kind of stock can be cheaply fed.

⚜

The Elgin butter market was quoted firm at 24c and in New York the fanciest lot commanded 23 cents. Cheese in New York brought 9⅝—9¾c for a few special lots of Oswegoes.

⚜

Never put dry layers of hay or straw into the silo along with green fodder. Every layer of the hay and straw makes a strata of air that cannot be forced out, and hay will absorb moisture enough from the silage to cause it to mold because of this air, and the germs of mold that it contains quickly begin to multiply. Mold once started travels a good ways and more or less silage will be spoiled in whole or part, above and below each layer. Such is the tendency of those who have experimented along this line of investigation.

⚜

"The farmer must be educated to be the intellectual peer of any man," says Wm. G. Smith of Minnesota, "and so be able to fight successfully those systems that absorb too much of his profits." A bright young boy once said he had a farm which was exempt from taxation, not subject to execution, and equal in value to any other of three times the area. "Where is your farm?" he was asked. "Under my hat," he replied. And he was right; every industrious, ambitious, and deserving young man has that kind of a farm by divine inheritance. Shall it be allowed to run to weeds or shall it be cultivated, fertilized, and developed? There can be but one answer for the farm under the hat—let us educate.

There is value in neatness. Most folks realize that a good-looking farm is a good farm.

This fall is a good time to put into effect that contemplated plan of improving the home grounds.

"SNAG-PROOF" Rubber Footwear

Have You Ever Compared Leather Shoes With Snag-Proofs?

LEATHER is high. Snow, sleet and slush ruin leather shoes. They can't keep your feet warm in mean weather.

Snag-Proof rubber footwear has not advanced in cost anywhere nearly as much as leather. Yet it is more comfortable, warmer and gives better service during winter. No matter how bad the weather is, if you are wearing Snag-Proof rubber boots, shoes or arctics, your feet are kept warm, dry and snug.

And you can't get better rubber footwear than Snag-Proof. Nearly fifty years of progressive study have enabled us to make truly exceptional rubber footwear. The green Snag-Proof label is on every boot, shoe and arctic. Look for it.

Have you met the Snag-Proof dealer in your town? His proud boast is that once he sells a man a Snag-Proof boot, shoe or arctic, he has made a permanent, satisfied customer. Let him show you the footwear that will please you in every respect. He has the right style and grade to fit your need at the price you want to pay. Look him up.

League Milk Sold for $3.65

Does Not Include Milk Now Manufactured

At a meeting of the directors and county presidents of the Dairymen's League held in New York City September 27th, it was voted to sell League milk for October for $3.65 per hundred pounds. This is for three per cent milk at the 200-210 mile zone, with the usual butterfat differentials and with freight differentials as changed by the new freight rates. At a meeting of the directors held two weeks earlier, they voted for a price of $3.85. But the League was unable to sell the milk at this price and for many reasons it was thought best to change the price to $3.65. Final agreement has not yet been reached with the distributors but they have intimated that they would buy at this price.

Manufacturers of milk products still refuse to buy milk at any price after the beginning of October so that the above price will not include the milk of those members of the organization who are now selling to the manufacturers but it will move all of the milk for the fluid market and that which is going to ice cream manufacturers.

The chief reason why the directors decided to change the price was that no milk had been sold at the $3.85 price; there was no prospect of selling twenty-five to thirty per cent of it now going to the manufacturers at any price, and, therefore, if the fluid milk was not sold, it would be a case of a double-headed fight with all of the dealers, and nothing would please many of them better than to have the farmers keep their milk at home.

In case of trouble, the dealers would be so situated that the distributors would obtain a considerable supply of milk now going to manufacturers at very low prices and use this cheap milk as a weapon against the producers of fluid milk who were keeping it at home. In case the farmers won the controversy, the distributors would immediately put up the price again to the consumers with the farmers' higher price as an excuse (it would not be a justification) and this would immediately reduce consumption and react to the detriment of the farmer especially when the tendency of all markets is downward.

With the sale of all the fluid milk and the milk to the ice cream manufacturers at $3.65, not only will the milk of the great majority of the members be sold but it will be possible to sell at this price to the distributors at least some of the milk which is now going to the manufacturers.

Three dollars and sixty-five cents per hundred pounds is below the cost of production, and is not a satisfactory price to farmers. On the other hand, it is fifty-four cents higher than the price for October milk last year, and milk will be sold by the League at this low price in consideration of the very critical situation which is faced at this time by all kinds of business.

The Pooling Plan

It is hoped that by November the situation will improve. In the meantime, the signing of the co-operative contracts and of the orders for pooling of the proceeds from the members' milk is going on. Meetings are being held in every community in Dairymen's League territory, and with almost no opposition the farmers vote to put their business on a better basis by signing the co-operative contracts and the orders on the dealers for the pooling of the proceeds.

It is not certain yet that the pooling can be put into effect to take care of October milk, as it is a tremendous job of organization to get the contracts to farmers, have them signed and then to make the necessary business arrangements afterwards to make pooling of proceeds imperative. Whether or not it can be done, depends almost entirely upon the farmers themselves and the interest they have in saving their own business. It was the opinion of the majority of the Board of Directors that it would be possible to get ready to pool the October proceeds. If this can be done, and with the selling of a large part of the October milk for $3.65, all of the members of the Dairymen's League can be taken care of without tremendous loss to anyone.

This will make the best of a bad situation and will lead to the establishment of the co-operative plan, the ownership of the country plants and equipment by farmers whereby their markets cannot be interrupted by the arbitrary action of the milk dealers and whereby their business can be put upon a more successful and permanent basis.—E. R. Eastman, Editor Dairymen's League News.

Butter Markets Make Further Substantial Gains

Active Demand and Comparative Shortage of Finer Grades Responsible for Firm Tone

[Report by U. S. Bureau of Markets]

Greater firmness than has been noted for some time developed in the butter markets during the week ending September 25, and prices made substantial gains of 2 to 3 cents. As has generally been the case this year, demand and a comparative shortage of finer grades were directly responsible for the firmness. Undergrades were accumulated and showed but little price change until late in the week, when the advance on top grades directed the attention of buyers to the relatively lower prices ruling on underscores.

It was thought that the rapid price advances which took place might slow up consumption, but the trading showed no evidence of this, and western dealers, who have been more or less skeptical regarding earlier price advances at New York, were more confident when the movement of undergrades began to improve. Heretofore, even when the markets have appeared weakest, there has usually been a surplus of undergrades to act as a drag on the market.

The average wholesale prices on 92-score butter at five of the principal markets, for the week ending September 25, were as follows: New York, 61.4 cents; Chicago, 57.7 cents; Philadelphia, 61.5 cents; Boston, 60.7 cents; and San Francisco, 63.6 cents. For the corresponding week last year the average prices were: 60.5c, 59.5c, 60.8c, 59.8c, and 60.9c, respectively. The receipts of butter at these five markets were 9,720,798 lbs. as compared with 8,770,458 lbs. for the corresponding week last year and 10,378,735 lbs. for last week.

Clean nests for clean eggs; eggs should not need washing.

Have You A Little Spare Time?

Have you a car—or a horse and buggy?

HOARD'S DAIRYMAN would like to offer you a proposition to look after our subscription interests in your community during your spare time.

It would be light, pleasant work among your old neighbors; and we can make it really profitable, too.

Write and tell us about the territory around you and how much you could take care of, and we'll make you a proposition.

Hoard's Dairyman, Fort Atkinson, Wis.

. . . **STATEMENT OF** . . .

The Ownership, Management, Circulation, etc., required by the Act of Congress of Aug. 24, 1912

—OF—

Hoard's Dairyman

Published weekly at Fort Atkinson, Wis., for October 1, 1920.

State of Wisconsin, County of Jefferson, ss.

Before me, a Notary Public in and for the State and county aforesaid, personally appeared Frank W. Hoard, who, having been duly sworn according to law, deposes and says that he is the business manager of the Hoard's Dairyman and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher W. D. Hoard & Sons Co. Fort Atkinson, Wis.

Editors A. J. Glover, P. C. Burchard, C. L. Burlingham Fort Atkinson, Wis.

Managing Editor A. J. Glover Fort Atkinson, Wis.

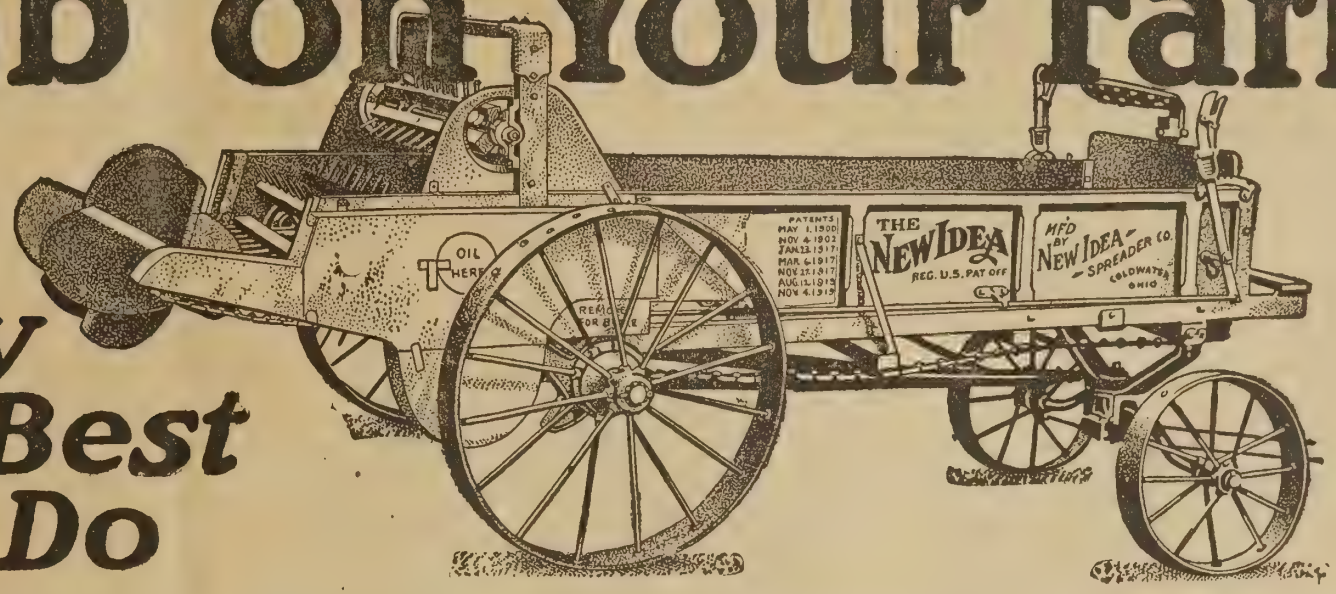
Business Manager F. W. Hoard Fort Atkinson, Wis.

2. That the owners are: W. D. Hoard & Sons Co., Fort Atkinson, Wis.; A. R. Hoard, Fort Atkinson, Wis.; H. L. Hoard, Fort Atkinson, Wis.; F. W. Hoard, Fort Atkinson, Wis.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

Signed, Frank W. Hoard, General Manager.



Sworn to and subscribed before me this 1st day of October, 1920.

Signed S. R. Jones, Notary Public.

[SEAL](My commission expires Aug. 10, '24.)

When writing advertisers please mention Hoard's Dairyman.

For the Biggest Job on Your Farm

-Only the Best Will Do

FEEDING the soil that feeds your crops--replenishing your land regularly with Nature's greatest soil sustainer, manure--***it's the biggest job on your farm, the most important.***

Successful farmers everywhere realize this. They know that yields increase yearly and land rises steadily in value, when the greatest of fertilizers--stable manure--is used as it ***should*** be used.

If you want to make certain that this job is being taken care of in the best possible way--as well as the easiest--if you want to know that every ounce of fertilizing value in your stable manure is saved to feed your growing crops--get a New Idea Spreader.

It is the one spreader that gives you the greatest worth out of your manure with lowest upkeep and least amount of work for man or team.

Straw Spreading Attachment Gives Two Machines in One

A BIG capacity one man straw spreading attachment gives you double use and double spreading profits from one machine. Shreds the straw fine and spreads it evenly, 8 to 10 feet wide. Quickly attached or taken down. Simple, light and compact, it takes up little space when not in use. Your dealer will show you. Or, use the coupon.

Our interesting little book entitled "Feeding The Farm" will be sent free to any farmer. Contains much highly valuable information on soil fertility. No obligation--use the coupon.

NEW IDEA
Registered U.S. Pat. Off.
The Original Wide Spreading Spreader

Actually Does Better Work

THE NEW IDEA SPREADER pulverizes perfectly. It beats and shreds every scrap into fine particles and spreads its load lightly in a thin even blanket, seven feet wide. No bare spots--no spots too heavily manured.

The New Idea is the ***original*** wide-spreading spreader. It is light draft, easy to load and built for years of service. Solid bottom--no slats--powerful chain conveyor--no gears to break in cold weather.

The New Idea is strong, sturdy, always on the job. It saves time, energy, work--and gives you the last bit of soil-building value that lies in the manure.

The New Idea is the ***safe*** spreader to buy--the product of "Spreader Specialists"--a standard implement of known quality.

Our Gold Seal Guarantee absolutely protects you against breakage or defects. Ask the New Idea dealer in your town to show it to you when he shows you the machine.

Motor Trucks and the Farm Labor Problem

The farm that is properly equipped with power farming machinery has no labor problem. Farm labor naturally seeks it because, there, the work is lighter, the day shorter and much more can be accomplished.

A Federal is a natural part of every farm's power equipment. It, too, saves valuable time, lightens labor and accomplishes a greater day's work.

The Federal dealer nearest you will be glad to demonstrate its capacities and help select the farm body that will most nearly meet your requirements.

You Get What You Advertise

(Continued from first page.)

ties I mean items such as fetching wood from the wood pile, (of course I allow for cutting and hauling and making that woodpile), cutting a lawn, or stoking the furnace and sifting ashes. There are many similar petty tasks that one man or the other performs as a matter of course and that the city man ordinarily does not make as a mental charge against his "work" and the farmer ordinarily does. In both cases such tasks are done in person by the householder who must be economical of money and in both cases it pays few householders to hire such tasks done. Farm or city, they ought not to be fairly rated in the day's work even though they are in both cases daily "chores". But the so called "chores" that are properly part of the constructive work, such as the barn chores on the farm or the sweeping out and early heating up of the baker's ovens before the dough goes into them, are both part of the day's constructive work, though they are both in the nature of "chores".

We sometimes have "time studies" made in our factories to determine how much of the time the employees spend is constructive and how much is wasted motion or lost motion. If the same experts should make time studies on a series of farms——! But I am getting away from my theme.

I do sincerely believe that a large part of the farmer's labor trouble is due to a persistent habit of talking of the imagined joys of city life and "knocking" because of this, that, and the other difficulty connected with the work on the farm. If one-half as persistent, one-sided, and true propaganda concerning the unpleasant side of city life as compared to that on the farm was offered the city dweller, many would leave the city for the farm and the farm labor problem would be solved.

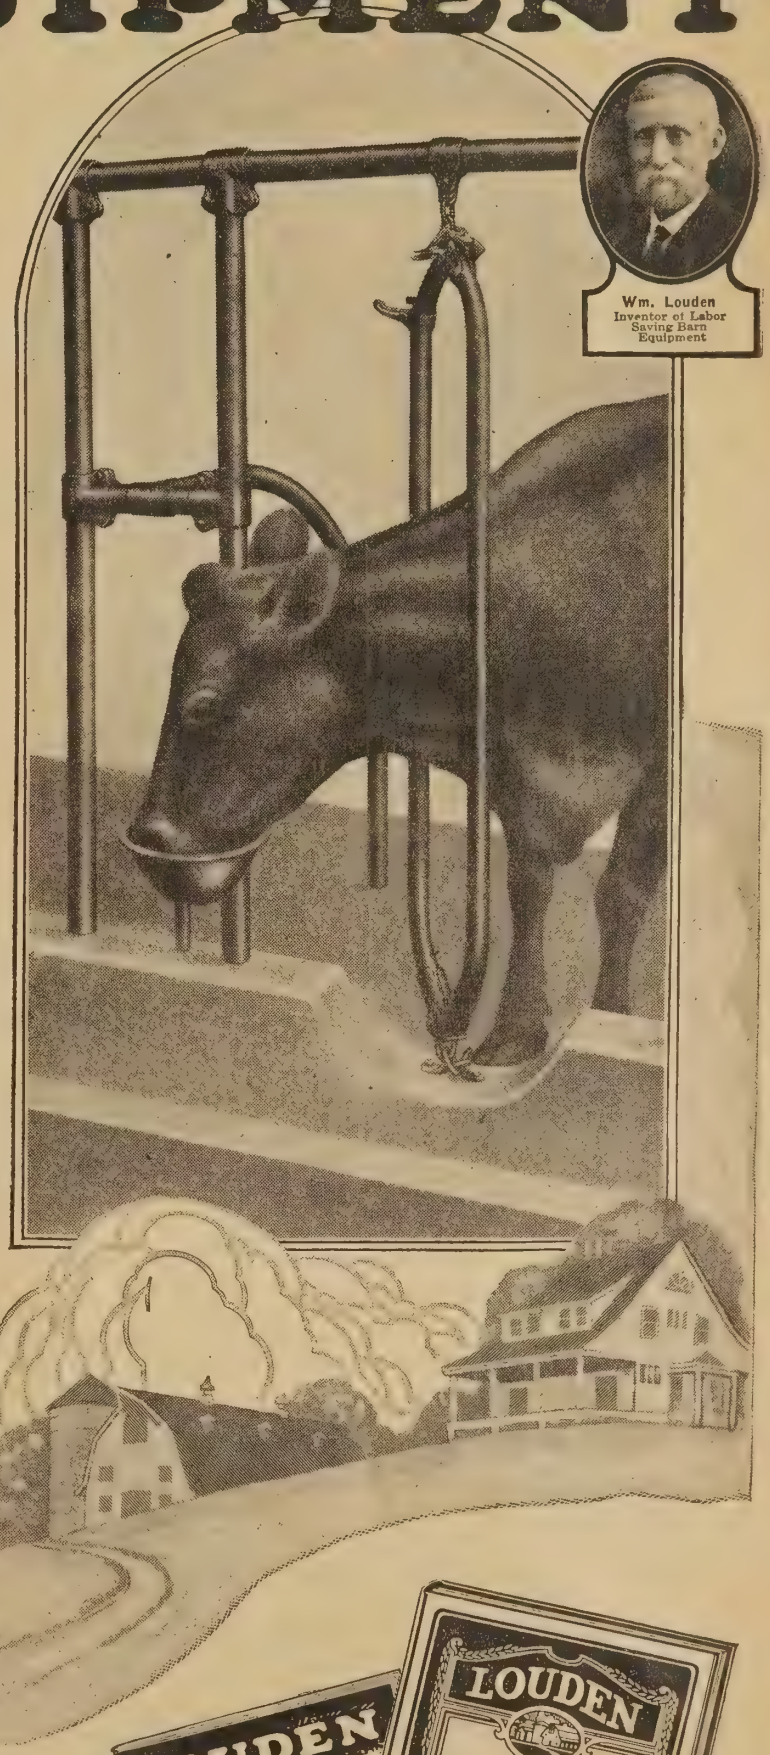
Come on, brother farmers, throw out your chests altogether and start the propaganda by saying: "Long hours! Yes, but in God's free country where the sun is not reflected from hot, hard pavements; where cool water comes from a spring, not tepid from pipes; where at night the wind from the grasslands or the tree tops blows clear through your bedroom and out the other side.

Good! Take a new, long breath, chests out again, brothers, and say: "Hard work!" You bet! Bully hard work which strengthens the muscles and hardens the hands and brings a man into contact with the good, honest, sweet smelling soil of the country; work where a man is not nagged by a sub-foreman, or liable to be thrown out of his job on pay day because the firm has failed; work where a man can think for himself as he works.

Once more! Another good lung full of country air! "Limited household comforts?" Yes, but if somebody else goes on strike in the winter time no farmers' house ever goes cold so long as the woodlot holds out. You are not dependent on the whim of a janitor as to whether your dwelling place will be warm or cold today. So long as there is illness in the house on any farm there are always neighbors ready to offer services and who will help in your kitchen or the sick room. There is more free help than you will ever find without paying good hard money for in the city, and such help so given in the country won't be half hearted either. If you are sick in the country, you'll be in your own bed at home among friends instead of being carted off in an ambulance to loneliness in a hospital.

We're gaining! Try it again! "Plain meals?" Yes! But there's no gassy city smoke and filthy human dust blown into the meals as they cook and when we get garden vegetables, we get vegetables! The sweet corn isn't wilted and corky. The beets are plump and juicy. The string beans aren't all string, other vegetables are really fresh and their full flavor is not lost by lying in a city market in the sun for a day or two. The Lord knows you can't hold enough apples to make any impression on the mass of them that are lying around under the trees free for the eating from August to November or December and after that the cellar will be full and just as free. They won't cost five to ten cents apiece as they do in the city.

Think up, brother farmer, all the other things you have heard your neighbors growling about and I'll bet you I can offset them three to one with things to growl about in city life. But unless you challenge me I won't, because I was born almost in the city, live there some of the year, and though I own a farm I can see the good—and find the places to growl over if I hunt for them—in both. I refuse to knock either. You may be fitted better for one life and I for the other or we may both be misfits, but if either of us want labor to come out of its shell and join us where we are ——! No, I won't say it again.



A good house has three complete parts: One for work, one for play, and one for rest

LOUDEN
BARN EQUIPMENT

Keeps the Boys Interested in the Farm

When the farm boy gets the fever to go to the city or the hired man "jumps his job," visit the barn—it may suggest a reason. Slopping around a filthy barnyard in rubber boots, cleaning out the barn with a pitchfork and wheelbarrow is the meanest, dirtiest, most unpopular job on the farm.

You can transform the drudgery of barn work into a pleasant, profitable job through the use of Louden Labor-Saving Equipment, because it takes all the hard, disagreeable work out of the daily chores—cleaning the barn, handling the cows, feeding and watering.

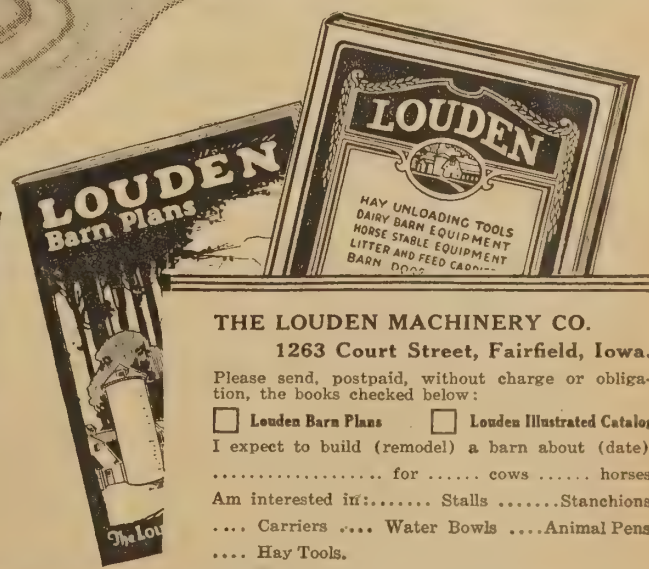
Saves Half the Labor and Time

Have more time for other work by using a Louden Litter Carrier—clean, quick and water tight—the carrier that actually takes out as much as five wheelbarrow loads at a single trip—dumps it into a spreader or manure pit. Saves more than half the labor every day in the year and turns a man's job into a boy's pleasure.

Louden Quick Detachable Water Bowls eliminate the time-wasting job of turning the cows out for water once or twice daily. More important still—the cows give anywhere from 20% to 40% more milk because they can get all the water they want, when they want it, and at the right temperature.

Louden Steel Tubular Stalls and Stanchions make it easy to keep the cows clean and the barn sanitary—saving more labor and insuring a better grade of milk. In addition, they give the cows genuine "Pasture Comfort"—the kind of comfort they pay you for in a fuller milk pail. The Louden High Built-up Manger Curb alone will keep you from wasting enough feed to repay for the stalls within a few years time.

Get Our Big New Catalog



Sent postpaid on request—no charge or obligation—gives full information about Louden Stalls and Stanchions, Galvanized Manger Divisions, Animal Pens, Feed and Litter Carriers, Water Bowls, Barn and Garage Door Hangers, Hay Unloading Equipment, Power Hoists, Ventilators, Cupolas—"Everything for the Barn".

Let our experts help you with your barn improvements. Write us about your needs, number and kind of stock you wish to house. No charge for preliminary plans and suggestions to meet your particular requirements. Get the Louden Farm Plan Book, showing many styles of barns and giving information on hundreds of points barn builders ought to know. Fill out and mail the coupon —you will receive this book postpaid.

Louis P. Eigenmann, Rockport, Ind.

$150
30 Holstein Heifers

coming two years old. Sired by "Sir Riverdale May Echo Lyons", brother to "May Echo Sylvia". Bred to "Sir Echo Verbelle Twice". All of them straight, guaranteed in every way and tuberculin tested. Only $150 each. Their calves will carry 82½% May Echo blood.

J. C. Eyre, Chantry, Ontario, Can.

Mara Alva

75 Head

Registered Guernsey Cattle to be sold at public auction

Mara Alva Farms Smithville, Ohio

Thursday, Oct. 21, 1920

This offering will consist of 25 choice cows in milk or close springers. A fine lot of bred heifers, a few choice bulls and a beautiful collection of yearling heifers most suitable for calf club work.

Many of the cows and heifers are in calf to Wardem Ultra King (27922) senior herd sire at Mara Alva.

It will perhaps be sufficient to say that Wardem Ultra King is by a son of the famous **Ne Plus Ultra** and out of Queen of May Rose (28326), one of the choicest daughters of May Rose King (8336), making him a bull of superb breeding.

Cows and heifers in calf to this bull should find ready sale, with those wanting the choicest of foundation stock.

This is Mara Alva's fifth semi-annual sale of registered Guernsey cattle and you are cordially invited to attend.

Two Ohio Holstein Sales

October 23

The entire Ruffner herd of 70 first class registered Holsteins will be sold at Lebanon, Ohio.

It will include daughters of Reinickel Sarcastic Segis Fayne and cows bred to him. He is sired by a grandson of Sarcastic Lad and from a granddaughter of King Fayne Segis that has a 7-day record of 33.45 lbs. butter, 628.5 lbs. milk.

Some splendid 2-year-old heifers bred to a half brother of Reinickel Sarcastic Segis Fayne out of a 25-lb. granddaughter of Sir Fayne Concordia and to a 26-lb. son of King of the Pontiacs. Also some good granddaughters of Colantha Johanna Lad.

October 25—26
The Wellington District Guaranty Sale at Wellington, Ohio

45 excellent grade cows and 2-year-old heifers due early in November, including the entire grade herd of M. L. Fuller, several of which have C. T. A. records of from 10,000 to 14,000 lbs. milk in a year.

85 registered Holsteins including the J. G. Beal herd and that owned by Frint, Mays, and Garver, as well as one or two animals from other herds in the district.

Every animal in the sale has been selected and only really good ones have been included.

Every animal over 6 months in both sales will be tuberculin tested and sold subject to a retest guarantee.

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Broadening Out

"Why, how perfectly splendid, dad," exclaimed Bob on the morning of his nineteenth birthday as his father presented him with a brand new Henry of the coupe style. "You tell 'em, dad, you've got the idea when it comes to knowing what a boy likes. Why I never dreamed of such a thing, dad."

"Of course you didn't, son; that's the reason why I bought it for you. I thought you would be pleased to have a car of your own, even though you have never been denied the use of the Cadillac. Ownership is what the boys like," he concluded with the satisfaction that he had done the right thing.

As a matter of fact there had been considerable family discussion as to whether or not it would be a good thing for Bob to have a car of his own. Aunt Ella decided as usual in matters of this kind that concerned Bob. "No, John," she had said with sarcastic firmness, "don't get it for him, at least until he is through college. I am sure it will ruin his scholastic record. College boys do not need extras of this kind to make their college course pleasant. I shall consider it a wasteful expenditure of hard earned cash," she added with final determination.

But to all of her arguments Bob's father had the one ready answer which he had always used to put an end to unpleasant family entanglements that arose whenever Bob's welfare seemed to be at stake. "Everything I have done for Bob, having his best interests at heart for his future, have worked out just about as I thought they would," he replied, "and no one can say that Bob is a spoiled boy. He is developing into just the kind of a young man that I want him to be and I think he is old enough now for you to give him credit, Ella, for knowing more about life with its many problems than you do. We have plenty of money and are making more all of the time, and if one of Uncle Henry's Lizzies will make my boy happier, as I think it will, he is going to have it. So you can consider that final."

Of course Aunt Ella considered herself the most abused creature in seven counties, but that made little difference to either Bob or his father for the former had the car and the latter had had his way.

One morning after Bob had had the car for about two weeks found him engaged in the following conversation with his father. It was one of those drizzly, rainy mornings that sometimes make it difficult for the farm folks to keep busy. The two men stood in the doorway of the horse barn, apparently deliberating what they should do next now that the chores were all completed.

Now this would be a good time to approach dad upon the thing Jimmy and I have been discussing, thought Bob. It's a lot easier to reason with dad when he hasn't much else on his mind, he thought. He seems to be pretty good natured, too, this morning, so I am going to tackle him with all the diplomacy I've got. And so he sailed into his subject.

"Dad, I know that both you and mother agree that good reading has a very broadening influence upon the reader. I agree with you both and I think I have profited a great deal from the habit which you and mother helped me to form in doing a certain amount of good, wholesome reading each day. It made my college English a great deal easier than it was for many of the other boys."

Mr. Ramsay wrinkled his high, shiny brow and began to tug at his short, wiry mustache. It was a rather unusual subject interjected at a rather unusual time he thought and he wondered what kind of an attack son was going to put up this time. "Well, what has this got to do with the weather, boy?" he grinned. "Good reading doesn't seem to stop the rain. Wish it would," he added. "We're getting behind in our field work." Then thinking to spoil Bob's little attack, he asked, "Son, did you fix that hole in the lane fence where the old sow broke through the other day?"

"Yes, dad, I did," he quickly replied, and before his father could get in another word he said, "Dad, what do you think about traveling compared to reading as a broadening influence? Which do you think is better?"

" 'Twould be hard to say, son. Both are good." Then quickly—what are you getting at, son? You sound a little mysterious this morning. Isn't going to be a wedding soon, is there?" he joked. "Better not pull anything like that just yet, son, for I shall have to agree with Aunt Ella and you know now where she will stand upon that subject."

"Well, I kind of wish it was my wedding announcement, dad," he laughed back, "but don't worry about that. I expect to be a free man for at least three more years. No, dad, it's some thing lot's worse than a wedding announcement. Jimmy and I have planned to take off the month of August and the two of us together with Lizzie—don't get alarmed, dad, Lizzie Ford I mean, intend taking a trip through the South. And now I want to know if you will give your consent. Mr. Greene says Jimmy can go and he even has promised to pay one-half of the expenses.

"Humph," grunted Mr. Ramsay, "Pat Greene's getting mighty liberal lately. Building modern houses and sending his son to college and to cap it all now wants him to go gallivanting around among the niggers of the South. Wonder if he thinks that will give young Jim a polish, society polish, I mean."

"Come on, dad, say yes," urged Bob impatiently.

"Who put this fool idea into your head, son?" he demanded.

"Doesn't look as though it is going to be so easy after all," thought Bob. "He thinks it's a fool idea." And so he proceeded to answer the question. "You see, dad, it's this way. Last year at college we met a fellow from the South, from Georgia, and he was always telling the rest of us kids about the wonderful opportunities in his state, about the cheap land that can be bought, about the good soil and the good weather and the long cropping season. And he thinks that a young man can make a great name for himself in a short time down there if he just goes into the stock industry and develops that. Guess most of us believed him, too, but Jimmy seemed just a little skeptical and so the other day he suggested that we take a trip down there and look over the country ourselves."

OVER TO JIMMY'S TO TELL HIM THE NEWS

"But I thought you fellows already had planned on coming home to the old homesteads when through college," interrupted his father.

"We have, dad, and we will, too. Of course Jimmy thinks that if there are such good opportunities down there, we ought to get in on them. It's different in his case, dad. There are so many Greenes and that doesn't give him the chance that I will have here on the home farm. I'm looking at the trip merely as being a vacation which will do us both good, as well as being very instructive. We'll be back in the north for good when we once get back. Now can we go, dad?" he teased in boyish earnestness.

"What do you figure it will cost?" inquired his father.

"According to our calculations it ought not to run higher than $300 apiece," Bob promptly replied. "And that includes everything that we could think of," he added.

"Well, I don't think much of it, Bob, and besides you won't have much of a car left by the time you get back. Roads are not like these all through the country."

"Yes, dad, we figured on bad roads and if other cars can run on them, I'll take a chance that Henry Ford can do what they can and some things in addition."

Then followed a silence of a few minutes which to Bob seemed like an hour. His father was thinking it over.

"Does mother know about this?" he inquired.

"Sure she does, dad. I consulted her first and she says whatever you say will be all right with her."

"How about your Aunt Ella?" he smiled. "You know she has to be consulted, boy."

"I don't see why," and Bob began to pout. "She's been mixed up altogether too much in my life, dad, and I'm tired of listening to her arguments. It always ends the way you and mother say any way. Just keep mum about it to her until after we have started and then if you think it will do her any good tell her and you and mother can enjoy the fireworks all by yourselves. Let's make this our business for once," he confided.

"Well, son, after listening to your arguments, I have decided to leave the matter entirely to you. Go if you want to, but remember I shall expect you to give a good account of yourself. It won't be all fun, I assure you, and both of you are going to get pretty tired before it is over," and with that he arose and started for the house, leaving Bob to think further upon the subject.

It didn't take Bob long to decide what to do. "We are going," he said half aloud, "and I had better drive over to Jimmy's right now and let him know the outcome." He was met at the door by the entire Greene family as he dashed up the driveway, squawking the tin horn of his coop, as Jimmy called it.

"A week from today, Jimmy, is the time we start," he announced. "Dad has given his consent, although he thinks we're out on a wild goose chase, but like a good fellow he gave in and said that I could suit myself. He isn't going to say anything to Aunt Ella about it, at least not until after we are well out of sight. This is one time when she isn't going to get a chance to butt in on our game" he added.

The following Saturday evening found the two boys driving into the city of Kenosha. They were headed for Chicago. "What will we do?" asked Bob. "Stay here tonight or run on to Chicago? It is now seven-thirty and 'twould be pretty late when we get there. I'm for staying here, Jim. What do you say?"

"Guess that's what we had better do," he answered. "Chicago's a pretty big place and since we are not acquainted there it might be pleasanter to stop in a smaller town where it isn't so much trouble to find our way. Guess it's no easy job to drive a car in that city anyway. Too much traffic." So it was decided that they would stay in Kenosha that night and start out early the next morning for the big city.

"Listen to that noise," said Bob as Jimmy returned to the car from the hotel where he had been to register for the night.

"What noise?" he inquired, watching the disturbed expression on Bob's face.

"Can't you hear that grinding roar in the motor?" returned Bob. "Just

as though something isn't getting oil enough."

"Acts like a case of colic," laughed Jimmy who did not deem it anything very serious.

"It's no laughing matter," frowned Bob. "We can't go on tomorrow with it acting this way. Something's wrong, that's a cinch, but I don't suppose we can have anything done for it tonight, seeing it's Saturday. We'll just run it into the garage, and see what we can do tomorrow morning."

"It'll probably be all right," answered Jimmy. "Just a little tired, maybe that's all," he added in his optimistic way of looking at things.

"Hope you're right," said Bob as the two left the garage, starting for their room.

"Here, this way," Bob called as Jimmy started for the stairway. "We don't climb no stairs when we can just as well take the elevator," he whispered to his companion. Jimmy, who was not accustomed to the ways of the city, followed timidly after Bob, wondering just what he meant and what it was all about. Bob stepped briskly into the open door of the waiting elevator. Jimmy did the same, but much more cautiously. Bob removed his cap—ladies were present, and Jimmy watching his every movement did likewise.

"Going up," called the elevator boy, as he waited a moment before closing the door. As they shot upward, Jimmy grabbed Bob by the arm. It seemed to him that everything was falling from beneath, as he afterwards told Bob.

"Gosh, if that's the way you feel when you go up in an airplane, I don't ever want to ride in one," he laughed.

"You'd soon get used to it, Jim," said Bob carelessly. "Never climb hotel stairs when you can take the elevator, Jim," he cautioned.

"Say, Bob, what'd you give that kid a dime for?" inquired Jimmy rather sheepishly.

"Oh, that's just the custom in hotels," he replied. "You see, Jim, he carried our baggage to the elevator and from the elevator into the room. That's worth a dime, isn't it? And, besides, if you want any service while at the hotels you've got to pay for it."

"Well, he carried mine, too," said Jimmy, "so I suppose I owe him ten cents too," as he started for the door, thinking that he was in bad.

"No, you don't owe him anything, silly. That dime was for the both of us. You can pay the next tip and that will square us," laughed Bob.

"Well, I'm afraid I won't know just when a tip, as you call it, is necessary, Bob. I don't want to be giving away dimes for nothing, and still I want to be like other people, too."

"Don't worry over such small matters, Jim. Whenever you feel that you have had a little extra attention in the hotel, just slip the fellow a dime and you'll be playing safe. Say, kid," he added as he saw Jimmy preparing to shave. "I wish you'd take off that foot ball squad from your upper lip. You'd look a lot better. You won't be able to get away with that thing at college next fall, anyway, so what's the use in nursing the thing along."

"What do you mean by foot ball squad?" Jimmy retorted.

"Count the hairs in that eye brow and you'll see why," laughed Bob. "Oh, I might throw in a few of the substitute players," he added. "Now do you see what I mean?"

By this time Jimmy was peering intently into the mirror. "Does look pretty sad, I'll admit," he answered, as he rubbed his fingers across the few lonesome hairs. "Guess that's only another mistake the Lord made when I was created. He put all of the hair on my dome," as he shoved his fingers through his shock of red hair until it stood out in all directions.

"What's this room costing us?" asked Bob as he watched Jimmy chopping away at his beard.

"Three bucks," he replied. "Why, doesn't that suit you?"

"Do you mean three apiece or three together?"

"Don't know, didn't ask him," replied Jimmy doggedly with tears coming to his eyes as he drew his dad's old straight edge across his upper lip.

"Well, if it's three apiece, that's too much," answered Bob. "You want to make sure what the price is before registering, or else let me secure the lodging after this. We have got to keep expenses down, Jimmy, or we'll be pawning the car before we get back."

"Wait 'til you see what they charge us before borrowing any more trouble," Jimmy snarled back. "Don't think you know any more about getting rooms in hotels than any one else," he added. "You're all right, Bob, on most things and I'll admit you've had many advantages over me, but don't put up that kind of a front on this kind of a proposition. We've signed up for this room, and I'm very comfortable and think I'll sleep here tonight. You can do what you want to, and if the clerk says ten bucks tomorrow morning, he'll get it. That's the kind of a guy I am," as he slapped his razor back into its case.

Nothing more was said upon the subject and the two tired boys were soon sound asleep. They were up with the sun on Sunday morning. After eating a hurried lunch at a cheap Greek restaurant, they hastened to the garage to see what they could do for the trouble in the motor which they both felt sure was bound to delay them on their journey.

"As bad as ever," scowled Bob as he backed it into the street. "Hops along like a rabbit," commented Jimmy. "She certainly isn't hitting on all four." They stopped it on the side of the street and proceeded to turn out the spark plugs. They were all more or less dirty, but cleaning them didn't seem to help matters any. So on to the Ford service station they hobbled, only to be informed that no work was done on cars on Sunday.

"Well, when can you get at it?" inquired Bob impatiently. And after being informed by the manager himself that he would put his best mechanic at it early in the morning, the boys left for the hotel to dress for the day.

"We'll have to make the best of it, old kid," said Jimmy, "and the city of Kenosha can feel honored to entertain us for the day."

"Say, Jim, did you ever read that book called Quincy Adams Sawyer?" Bob remarked.

"Naw," answered Jimmy. "Why?"

"Well, Obediah Strout is one of the leading characters and he was pretty generally given to boasting and tooting his own horn. Somewhere in that book some one characterizes his conceit in this way. 'If conceit was consumption there would be another little green grave in the cemetery and Obediah Strout would be on the head stone.'"

"What's that to do with me?" retorted Jimmy.

"Not much, I guess," dryly remarked Bob, "but sometimes you show a little of the Strout in you," at which he burst into a laugh, at the same time slapping Jimmy on the back. "You're all right, though, Jimmy, so just swallow that mouthful of nasty words you're going to fire at me."

The day wore slowly away. They had walked, visited the movies, and attended a base ball game. They were on hand at the garage the next morning when the doors opened. The head mechanic was assigned to the car and before going to work on it he asked Bob to give him a short drive about the city so he would know more about the trouble which he was expected to correct.

"Clogged oil tube," he said as the two got out of the car. And the grinding noise is due to the fact that one of the pistons isn't getting oil enough." Within half an hour he had the motor sufficiently apart to blow out the oil tube.

"Do all of the pistons fit as tightly as they should?" inquired Jimmy. "Seems to me that one of them must be pumping too much oil and maybe that is the reason for the grinding noise because some of the others are running too dry."

"Yes, I was going to ask you about that," broke in Bob. "I think there must be something like that wrong because the first spark plug is always getting gummed up with oil and carbon and it has been causing all kinds of trouble for the past month."

The mechanic bent over the motor and carefully examined the fit of each piston. "The front one has just a little play in it," he explained. "It doesn't take much to make it allow too much oil to get by, and evidently that is why you have been having this trouble. I would advise a new piston before you go any further. It will cost you ten dollars, including the labor, but it will be worth all of that and more too. What do you say?" he inquired of Bob, as the latter hesitated.

"Well, if you think that will correct the trouble, we might as well have it attended to at once. What do you think, Jim?"

"Sure thing," replied Jimmy. "Have it done and let's get on our way. I'll stand half of the expense anyway, Bob," as he carelessly flicked the ashes from his cigar. "We'll just cut down somewhere else to make up for this," he added. And so the job was ordered done and the boys left the city bound for Chicago, confident that they would have no more motor troubles of that nature.

[To be continued]

Junior Letters

Hoard's Dairyman Juniors:—I haven't written to the juniors for some time.

I am eleven years old and in the sixth grade in school. I have a pig. His name is "Nig". Papa gave him to me. I have 13 chickens. Papa gave me 22 little chicks this spring; two died and the hawks got all but 13. I have 8 pullets and 5 roosters. I have a calf. Her name is Peaches. We have 5 calves. We are milking 14 cows. Papa has a registered bull and a registered heifer. I have 2 cows. Their names are Blossom and May. I belong to the chicken club. We have a pup. His name is "Chum". I have 2 cats, one is a grown one and one is just a kitten. Their names are Betsy and Tom. We have 4 ducks that we raised this year.

Oregon. Janet McHurgue.

Hoard's Dairyman Juniors:—I received the fob, creed, and button and like them very much.

I had a pair of rabbits but they died. We are milking 7 cows and have 6 calves. We have sold all our pigs. We have a pure-bred bull. I do not remember his name. I am 10 years old and in the 5th grade. I have a yearling heifer that father and I bought on halves. I wish some of the juniors would write to me. My address is R. F. D. c, Box 12, Tulare, Calif. Eugene Skidmore.

Hoard's Dairyman Juniors:—I am a new member of the Hoard's Dairyman Juniors.

The 24th of May I bought a Holstein heifer calf. She is three months old today and is mostly white. I paid $25 for her. Although she is a grade I have been offered $75 for her.

My father and I milk 10 cows now. We have one registered Holstein cow. She gave 322 lbs. in seven days.

We are going to build 20 ft. onto our barn this winter. Papa wants a silo, but hasn't got one yet.

I go to school and am in the 7th grade. The name of the school I go to is Fairview. Last year we had a pie supper and raised enough money to buy a slate blackboard.

The 27th of September I will be 13 years old. My address is R. R. No. 3, Pleasanton, Kans.

James F. Bell.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

COUPON

HOARD'S DAIRYMAN Juniors,
Fort Atkinson, Wisconsin.

I want to join your Juniors Club. My father's name is _____.

Current Feed and Hay Prices

[Report by U. S. Bureau of Markets]

Extremely dull conditions and a lack of confidence in the market value of feeds during the week ending September 25 resulted in a general decline in feed prices of $1.50 to $6 per ton. The heaviest declines were reported in gluten and wheat mill feeds. One of the large gluten feed manufacturers announced another reduction during the week of $5 per ton in the price of this feed, making a total reduction of $10 per ton within 15 days.

Chicago jobbers are offering bran and middlings at from 50c to $1.50 under prices quoted by mills. At Minneapolis the market is weak and declining, with bran offered at $37 and middlings at $44. Bran was offered at $40 in Chicago and Cincinnati, at $46 in Boston, New York, and Philadelphia, and at $48 in Richmond and Atlanta.

Cottonseed meal of low protein content was not in great demand at prices offered. The 43 per cent Texas meal was offered at Kansas City on Saturday at $56.75 and 41 per cent meal was sold at $2 discount. This grade is quoted at $59 in St. Louis and at $62 in Boston and Philadelphia. The 36 per cent meal is offered at $56 in Chicago, $51 in Atlanta, $56 in Philadelphia, and $60 in Boston and New York.

Linseed meal declined slightly, with quotations as follows: $63 at Minneapolis, Cincinnati, and Philadelphia; $61 at New York and Boston; and $65 at St. Louis and Chicago.

Gluten feed has declined $10 in two weeks, but manufacturers report they are not selling their output. Quotations are: $53.75 at Chicago, $59 at Cincinnati, $61 at Philadelphia, and $62 at Boston.

Alfalfa meal is not in good demand, No. 2 selling for $29 in Kansas City and higher grades at $34. Hominy continues to decline, with brokers stating that lower prices could be secured. Stocks are heavy and demand light. Prices range from $43 in Omaha and $45 in Chicago to $55 in Boston and Kansas City. Beet pulp ranges from $53 in Los Angeles to $58 in Boston.

The hay market also continues dull, with declines up to $6 for timothy in the New York market. Quotations on No. 1 timothy are: $27 in Kansas City and Minneapolis, $32 in Chicago, $41 in Boston, and $42.50 in New York. Mixed clover and timothy ranges from $1 to $8 less per ton, the general average being about $4 lower. Clover hay is quoted at $21 in Minneapolis, $22 in Kansas City, $27 in Chicago, and $34.50 in Richmond.

There was a slight decline in alfalfa prices, quotations on No. 1 being: $25 in Omaha, $27 in Kansas City, $28 in Los Angeles and Minneapolis, $33 in Chicago, $32 in Memphis, and $39 in Atlanta.

POSITIONS WANTED

Married man, age 30, wants position on dairy farm as herdsman or working foreman. Life experience, capable, reliable, energetic, good milker, calf raiser. Can feed for records. Would consider share proposition. Good results assured. No children. D. L. LAMBERT, General Delivery, Minneapolis, Minn.

Farm manager—7 year's practical work in Virginia. Single, age 30, available in December. Prefer Virginia. Address BOX 397, care Hoard's Dairyman.

Wanted—Position as calf and young stock man. Holsteins preferred. 14 years experience. ALBERT C. ROUSSEAU, Grand Isle, Vt. 12-2

Reliable man wants position on farm by November first. Life experience, no bad habits. SAMUEL CALLOW, Route 8, Waukesha, Wisconsin.

Jersey Cattle Notes

For week ending Sept. 24:

Number of animals registered: Bulls, 268; cows, 717; total, 985. Number of transfers recorded: Bulls, 231; cows, 668; total, 899.

No man in this world ever rightfully gets more than he gives.—ADAMS.

THIS FARM FOR RENT

This farm consists of 360 acres and is considered one of the best farms in Southern Michigan. The gross income per year, from sales of milk and cattle, will average between twenty-two and twenty-four thousand dollars. Milk is retailed in Coldwater at 14 cents per quart. There are 100 head of milch cows on this farm. The farm produces sufficient feed each year, including grain, for all stock on the farm. There are 50 acres of alfalfa on this farm that produced nearly 200 tons of hay this season.

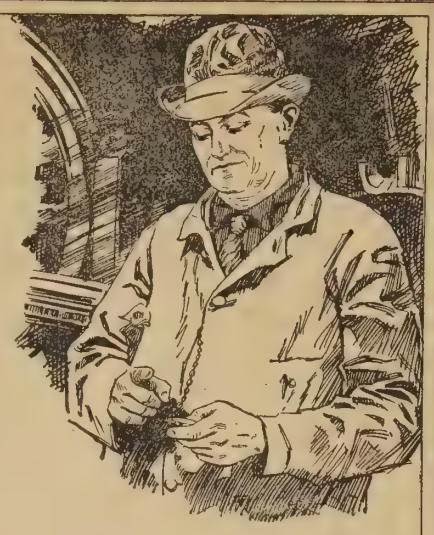
The house in the center has seven bedrooms, living room, dining room, kitchen, office, bath, toilet, furnace, gas, electric lights and city water. The house on the right has the same improvements except furnace. The house on the left has electric lights, gas and city water.

The cow barn is 150 by 38 feet. There are four silos and all equipment is in first class condition. The buildings are located within ¾ mile from the court house in the city of Coldwater, which has between six and seven thousand population and is the county seat of Branch County. Coldwater is one of the finest cities in the central west and is located on the main line of the New York Central Railroad.

I want a tenant who has plenty of help of his own. Tenant must own one-half of the cattle and all tools and horses necessary to run the farm. If the tenant has plenty of help to run this farm and has not sufficient money, I will help him to secure the additional necessary money, if he is the right sort. I will make a lease for 5 years on a 50-50 basis. Possession given March 1st, 1921.

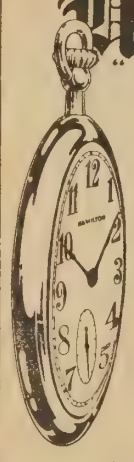
If this proposition appeals to you, let me know how much help you have and their ages, your nationality and bank reference.

This is an exceedingly good proposition for the right party.



L. J. Byers - - Coldwater, Michigan

An engineer dare not say



"My watch was wrong"

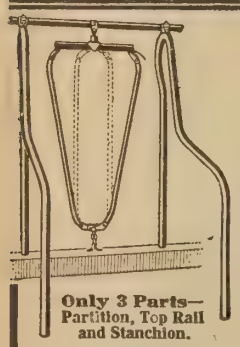
Having the correct time is vital with the engineer. Catastrophes thrive on trains that are late. Railroad men *must* be able to rely on the watches they carry.

The Hamilton Watch is wonderfully accurate and truly dependable. That is why it has become by far the most popular watch in use on American railroads.

Engineer F. J. Mink of the New York Central Lines, is known as "The Chief' on the New York-Albany run, because he's handled a throttle for thirty-one years. For ten years he drove the Twentieth Century Limited on his division, with the *Hamilton he carries*, and *established an enviable record for running on schedule.*

Hamilton Watch

"The Watch of Railroad Accuracy"



Like other progressive men, you've often wanted an accurate watch. Why not get one—a Hamilton? It would help save you time, be a constant convenience and source of pride, and would last you a lifetime.

There are 22 different Hamilton models to choose from with prices ranging from $40 to $200. Movements alone, $22 (in Canada $27) and up. Let your jeweler show you some of the many Hamiltons today.

Send for "The Timekeeper"—an interesting little book about the manufacture of fine watches. The various Hamiltons are illustrated and prices given.

HAMILTON WATCH COMPANY
Lancaster, Pennsylvania

Lasts Longer Than *the* Barn

Only 3 Parts—Partition, Top Rail and Stanchion.

—and Increases Dairy Profits

CLAY Equipment installed in your dairy barn is there **to stay.** Strong, simple steel construction cuts upkeep cost. Bolting only 3 parts together completes a sanitary, **permanent** stall with swinging stanchion. Smooth tubing—no dangerous corners.

CLAY Steel Dairy Barn Equipment

provides safety, quiet and pasture comfort in the barn. Saves feed, time and labor. Helps increase quantity and improve quality of milk. CLAY 2-WAY Stanchion instantly closed or opened **both ways** with **one hand.** Hangs straight in center of stall—no sure-stops needed. Cow can't get in wrong. Instantly adjusted to any size animal. Cow-proof lock. Easily kept clean. CLAY Equipment costs less than others. Fully guaranteed.

Free Barn Plan Service. CLAY architects will plan your alterations or new buildings **free**

Send name today—a card will do—for big catalog and Free Barn Plan Blank. Address

IOWA GATE COMPANY, 701 Clay Street, Cedar Falls, Iowa

Cow Waters Herself

with this wonderful new **Libbey Automatic Water Bowl.** Animal moves lever, opening water valve, when it starts to drink. Lever swings back, closing valve, when animal stops drinking.

15% More Milk

Milk is 87% water, and cows cannot give their greatest yield unless they have plenty of water constantly within reach. Farmers who use Libbey Bowls report an increase of 15% to 20%, which soon pays for the bowls.

Libbey Automatic Water Bowls

are the most sanitary and successful ever invented. Each bowl controls its own water supply, operated entirely by cow, and may be put at different heights, or in any stall or pen. No float tank required. Cannot overflow; cannot get out of order. Almost no water left in bowl to become stagnant. They save labor and feed and increase milk. Prevent spread of contagious diseases, as each cow has her own bowl and no water can pass from one to another, as with old-style bowls. Very simple and easy to install. Write for circular and prices, also FREE DAILY MILK AND FEED RECORD.

If interested in Stanchions, Stalls, Carriers, etc., ask for free General Catalog.

National Milk Producers' Federation

Abstract of Speech Delivered by G. P. Warber at the Semi-annual Conference of the National Board of Farm Organizations, Columbus, Ohio

The National Milk Producers' Federation was born of the adversity of the pioneer producers' milk marketing associations of the United States.

The Chicago Milk Producers' Association, the New York Dairymen's League, the New England Milk Producers' Association, the Twin City Milk Producers' Association, and the Associated Milk Producers' Association of San Francisco were among the first to demand a voice in the determination of milk producers in those regional markets. At the very outset all of those producers' co-operative or collective bargaining associations were attacked in force by the organized city distributors of fluid milk and operators of milk condenseries. Bitter and denunciatory articles were launched against them by temporarily misinformed metropolitan newspapers. Officers of these pioneer associations were vilified with such epithets as "unscrupulous promoters of milk trusts" and "baby-killers". In many cases legal proceedings were instituted against them.

It was out of the necessity for defense against such attacks that there was born the consciousness of the need for a federation of the various local or regional milk producers' associations; and in the year 1917 the National Milk Producers' Federation was organized and incorporated under the laws of the state of Illinois. This Federation immediately set itself to the task of safe-guarding what had been won for the cause of co-operative marketing by producers and of giving assistance to promote the right type of co-operative dairy marketing associations in unorganized territory.

The task that the Federation then had and still has before it is largely a matter of education. It calls for a nation-wide dissemination of the facts with regard to (1) the status of the dairy industry in this country, (2) the various and changing costs of producing market milk, and (3) the necessity for the organization of producers and co-operative marketing in order to insure the permanency of a wholesome fluid milk supply in the territory immediately surrounding most of the larger cities of the United States. Much has already been accomplished in this direction with the result that the greater portion of the natural milk supply of most of the metropolitan centers of the United States is furnished by producers who are members of local or regional producers' marketing associations and that these associations, for the most part, now have the support of not only the agricultural papers of the country—but also many of the most influential metropolitan newspapers. The educational and publicity activities of the National Milk Producers' Federation have been important factors in bringing about this revision of the public attitude towards the activities of organized milk producers.

Since May of the present year, the Federation has maintained a service bureau with offices in Washington, D. C., at the headquarters of the National Board of Farm Organizations with which the Federation is affiliated. The Federation is now in a position to give more active assistance than ever before in the promotion of the interests of producers' co-operative dairy marketing organizations in all parts of the United States.

GOSSARD BREEDING ESTATES

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

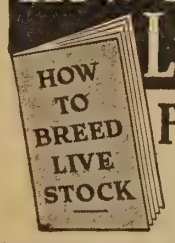
Abortion

1. About two months ago, while trying to dry the cow up, a quarter of her udder began getting hard and has now spread to two of her quarters. She walks stiff-legged, humped in the hock, and falls off in flesh. Eats all she can get. She dropped dead calf about two weeks ago and now milks about three gallons daily. The milk is as clear as if her udder were in good condition. We have never been able to get any lumpy or stringy milk from her. A few days ago a soft place appeared on one of the hard quarters and from it comes watery, blood colored puss and the quarter seems to be getting a bit soft. Can you tell me how to treat it and what caused it to get in such shape?

2. We have a lot of trouble in cows retaining their afterbirths. They all have been in the best of condition before calving time, and were fed on a mixture of corn cob meal and wheat bran of equal parts. Have had four out of nine to retain afterbirth.

Manning, S. C. C. L. D.

1. The cow in question no doubt is affected with the contagious abortion disease, as she dropped a dead calf. That disease also is the common cause of retained afterbirth. The condition of the udder, however, strongly indicates tuberculosis and it is quite likely that the cow is affected with that incurable, contagious disease. The fact that she is running down in flesh may well be another indication of tuberculosis. Under the circumstances you should have her tested with tuberculin and if she reacts all of your cows should be tested.



2. A trained veterinarian should be employed to treat all of the affected cattle as the infection remains in the womb and also involves the ovaries. Meanwhile flush out the vagina of each cow and heifer every other day with lukewarm, boiled water containing a heaping teaspoonful of table salt to the quart. The stable should also be cleansed, disinfected, and whitewashed. Isolate the cow that lost her calf.

Jersey Cattle Notes

For week ending Sept. 10:

Number of animals registered: Bulls, 189; cows, 506; total, 693. Number of transfers recorded: Bulls, 159; cows, 555; total, 714.

Fall Painting costs less than spring

There is at least one big reason why Fall painting will cost you less. Putting it off until next Spring, after your buildings have gone through another Winter's wear means they will take more paint to paint them. That's just the plainest kind of plain horse sense.

Then another thing: next Spring you will be so rushed with Spring work that you will put painting off until Fall—and so it goes on from bad to worse.

Any way you figure it, you can save money by painting this Fall. And speaking of saving — send for circular called—"Figure Your Paint Costs with a Brush—Not a Pencil." Remember that Lowe Brothers' Paint is sold by the one best dealer in each town.

For your protection be sure this diamond King trade mark is on the ventilating system you buy.

Keep Summer Conditions in Your Barn all Winter

YOUR herd goes into winter quarters in the best of condition after the summer in pasture. But what condition is it in when it goes back to pasture in the spring? The answer depends very largely upon your barn. A poorly ventilated, damp, insanitary barn will lower the vitality of the healthiest herd. Lack of fresh air is indirectly responsible for much tuberculosis. Often disease sets in and spreads before the owner is aware of it. The best preventive is plenty of fresh air. Dampness in a farm building is a thief that is constantly robbing the owner of a valuable property and profits on his investment. It rots the timbers of the building and hastens the depreciation of everything in it.

With a King System of ventilation installed fresh air is kept circulating through every part of the stock room without drafts. Your stock gets plenty of oxygen, and as the temperature of the barn is better regulated your stock is kept more comfortable, and excessive moisture is carried out of the building.

There is no guesswork about a King System. When we accept your order for a King System we realize more than you do what responsibility we have undertaken to ventilate your building. Your ventilating troubles are over; our problem just begins. Our first move is to study the conditions in the building, then we plan a system to fit the building.

Send for Our Free Book on Barn Ventilation

Do not let this winter pass without giving your stock the benefits of proper ventilation. We can put in a King System at any time—whether the building is old or new, and whether or not the mow is full of hay. If you are going to build a new barn, hog house or poultry house send us the plans of the building or tell us about what you will need, and let us plan a King System to be installed while the building is being constructed. That is the best time to install it.

Ventilating Engineers for Farm Buildings and Creameries

KING SYSTEM OF VENTILATION

"Make Good Barns Better"

Pioneering on the Path of Co-operation

(Continued from page 489)

all human therefore it is absolutely necessary to have a membership agreement providing that the individual producers must market their products through the organization.

"It must also be founded upon a special crop. Bean growers and cotton growers cannot co-operate. Each farm industry must be organized by itself. The group within the organization must be actuated by a common interest, a common purpose, and a common ideal."—Copyright, 1920, Standard Farm Papers, Inc.

Another 20,000-pound Ayrshire Record

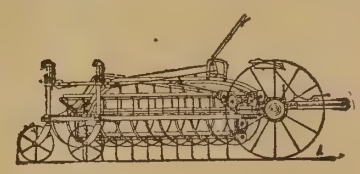
Voca 5th of Avon 40267 is the latest addition to the 20,000-lb. list of Ayrshire matrons. She has recently completed a mature record of 21,123 lbs. milk, 741.91 lbs. fat.

Voca 5th of Avon was born February 12, 1913. She was bred by W. P. Schanck, N. Y., and sold by him as a yearling. She was repurchased by Mr. Schanck a year ago, and without any preliminary fitting put on A. R. test, beginning same July 28, 1919, and completing her record July 26, 1920. Voca 5th of Avon is capable of still greater results, and will unquestionably be a strong contender for world record honors of the breed. Voca's sire is the great A. R. sire, Howie's Dairy King 9855, who has 32 entries in the Advanced Registry, averaging 11,674 lbs. milk, 455.83 lbs. fat, 3.90%, with 50% of the records made by immature cows. The daughters of Howie's Dairy King have a larger average of butterfat than the daughters of any other sire of the breed. The dam of Voca 5th of Avon has no record, having never been tested.

The Schanck herd has made quite an enviable record during the present year, winning Roll of Honor championship and Gold Medal in the junior two-year-old class with Jean Armour's Big Kate, and at the present time Addington Queen, of the same herd, is due to finish soon with another 20,000-lb. record.—J. G. WATSON, Secretary Ayrshire Breeders' Ass'n.

Corn Equals Hominy Feed as Swine Ration

Experiments conducted in the growing of swine at the Ohio Experiment Station show that there is very little difference in the amount of feed required per pound of gain for pigs fed on hominy feed as compared with corn.



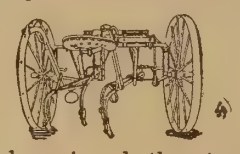
Pigs, however, do not eat hominy feed as readily as corn and consequently gain less rapidly. As formerly manufactured hominy feed had a value of 10 to 15 per cent greater than that of an equal weight of corn, but recent tests at a number of state experiment stations, including Ohio, now show that hominy feed is worth no more, if as much as a pound of corn.

Manufacturers of hominy feed now extract oil from the corn germ; the oil was formerly included in the feed so that there is a reduction in the energy or fuel value of hominy feed due to its lower fat content, it is stated.—Weekly Press Bulletin Ohio Experiment Station.

Inventions and Appliances of Interest to Agriculture

Side Delivery Rake

This rake has two caster wheels to support the rear end of the rotating rake. They are at different distances from the front end, but are so connected to the single lever that each

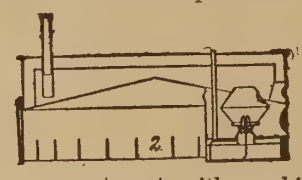


carries its proper share of the weight, whether the rake is raised or lowered.

(Dain Mfg. Co., Ottumwa, Iowa. U. S. Patent, 1,313,880.)

Cultivator

This riding cultivator is of the pivot axle, pivot gang type, in which the rider's weight normally supports the blades clear of the ground. It is so arranged that when the rider swings the gangs to one side, the ground wheels carry the frame to this side;

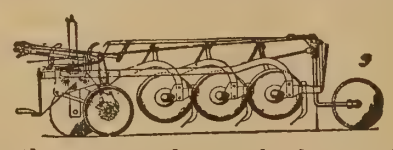


but when he swings both out, or both in, the wheels remain neutral.

(Roderick Lean Manufacturing Co., Mansfield, Ohio, U. S. Patent, 1,327,413).

Hover

One trouble with the ordinary hover is that as the oil lamp burns, it generates more gas inside the bowl than can be burned in the burner; this gas accumulates in the hover, and if it reaches a sufficient temperature ignites the hover. To prevent this, the bowl here is placed in a

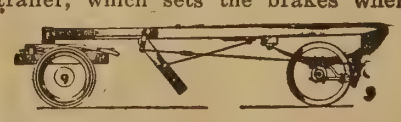


separate compartment with a chimney and has small gas outlets in its upper surface.

(Buckeye Incubator Co., Springfield, Ohio. U. S. Patent, 1,334,368).

Disk Plow and Subsoiler

The invention here relates to the mechanism for raising or lowering the disks at both ends at once. This mechanism is driven by power from the ground wheel and when tripped



by the operator, lowers the front and rear wheels to raise the disks, or vice versa.

(McKay Disk Plow Co., Rome, Georgia. U. S. Patent 1,323,887.)

Trailer

This invention relates to a two wheeled trailer with a supporting leg. The new feature is the connection between the leg and the brakes of the trailer, which sets the brakes when

the leg is down and releases them when it is up. This makes it practically impossible to leave the trailer without the leg in proper position.

(Lapeer Tractor-Truck Co., Lapeer, Mich. U. S. Patent 1,316,660.)

Canada. C. J. LYNDE.

White Truck owned by Garfield Carlisle, of Dunlap, Ill., delivering milk at Peoria

Most Dependable *for* Hauling Milk

GARFIELD CARLISLE hauls milk every day from dairy farms near Dunlap, Ill., to a large ice cream plant in Peoria, a round trip of 32 miles. Before investing in White transportation, he used trucks of different makes, but none was dependable enough for his purpose. For the milk *must* be delivered in the city at an early hour every morning, and his contract hinges on his ability to deliver with absolute certainty.

"My White has made it possible for me to run on schedule, something that I could not do when I used other trucks," says Mr. Carlisle. "There is no equipment for country hauling as dependable and economical as a White Truck."

The experience of Mr. Carlisle is a typical example of the performance of White Trucks in hauling milk, stock and other farm products. Wherever they are used, Whites are known for their ability to stand up and keep going day after day, year after year. Write for booklet which tells of the work White Trucks are doing in agricultural service.

Abortion

What can be done to develop the udder and increase the milk output from a three-year-old pure Jersey cow that dropped her calf too soon? Her udder never has developed, has always been small, and the quantity of milk too meagre to consider her profitable. July 3rd, she dropped a heifer calf one month too soon and shortly after an accident and fall while picketed out on a rope. The afterbirth was retained for a few days but at the end of a week she was all right again. She has not yet come into her usual flow and shows no indication of an increase. I have not bred her since her abortion although we keep a registered Jersey bull. Would breeding her now have any effect upon the present condition? She has come in heat twice since calving. Could the next lactation period reasonably be expected to show good results? Will she ever become a heavy milker?

Sarasota, Fla. (MRS.) R. H. E.

It is questionable whether this heifer will ever make a profitable dairy cow. In the first place the abortive act in all probability was due to the contagious abortion disease and there is no certain remedy for that. To determine the presence of infection your veterinarian may perhaps be able to arrange to have a sample of her blood tested for abortion by a trained pathologist or bacteriologist. Meanwhile, if you think her worth retaining, we should advise drying off the scant milk secretion and having her bred after womb has been disinfected by the veterinarian (unless that was done when she aborted and retained her afterbirth) and after flushing out her vagina every other day for two or three weeks with a mild antiseptic solution.

Leaking Teats

Not long ago I read an article in Hoard's Dairyman which described the use of teat thimbles to prevent the loss of milk from leakage. If you could give me information as to where I could get these teat thimbles, I should appreciate the favor very much.

Oneida, N. Y. E. O. T

We suggested that if rubber thimbles could be used they would be likely to prove a success, but we cannot tell you where they may be bought. If any readers know, we shall be glad to have the information. Meanwhile, as often advised here, first try the effects of immersing the teats night and morning in a strong solution of alum and if that does not suffice apply melted wax or paraffin after each milking and as a last resort apply flexible collodion. When the latter medicine makes the teats sore its use should be stopped for some time.

Retained Afterbirth

Please tell me the cause of retained afterbirth in cattle. I have never had but two cases of abortion and those were caused by accident, so contagious abortion is not the cause. The cows are always in good condition. What do you consider the best method of removing it? Is there anything I could feed my cattle before freshening to prevent its being retained?

Oregon, Wis. J. E. F.

The contagious abortion disease almost invariably is the cause of retained afterbirth. The germs of the disease infect the crypts or depressions of the cotyledons which grasp the villi or finger-like projections of the afterbirth (placental membrane), and cause swelling which prevents loosening and separation after calving. Endometritis is the condition present in such cases and it can only be remedied by treatment of the womb, for which a specially trained veterinarian has to be employed. We do not know of any internal remedy that will cure endometritis or cause expulsion of a retained afterbirth. Daily for a week before a cow calves flush out her vagina with lukewarm water containing a mild antiseptic. A quarter per cent mixture of Lugol's solution will suffice. If the afterbirth does not come away inside of 2 or 3 hours after calving inject into the vagina then and every 6 hours up to 48 hours the mild antiseptic solution mentioned. Increase its strength if a foul smell is noticed. If the afterbirth does not then come away you should have it removed by an expert who will give correct after treatment.

Illino. Brown Swiss Breeders Meet

The annual meeting of the Illinois Brown Swiss Breeders' Association was held September 9th on the farm of Peter Gerber & Sons at Tremont, Illinois. Despite a day of more or less rain, a large proportion of the membership with their families were present. One feature of the picnic was the estimating of the relative standing as milk producers and also the daily record of three Brown Swiss cows of the Gerber herd. Both men and women competed.

The annual election of officers resulted in selecting Rowland Wilson president, David Plattner vice-president, Chester G. Starr of Pekin, secretary-treasurer. The membership is now over sixty.

The week following the annual meeting 65 head of Brown Swiss were exhibited at the Morton Live Stock Show. All of the cattle were owned in Tazewell and Peoria Counties. The quality of this show was superior to that of 1919 when 78 were exhibited. Ralph Ayres won champion bull and Gerber & Sons of Tremont won champion cow. Immediately following this show, the Peoria Fair came. The better animals at the Morton Show moved over to Peoria to try conclusions with the Jubilee Farms and W. C. Randall. In the opinion of many breeders, this show at Peoria was the best Brown Swiss show that has been seen so far this year. In numbers the Brown Swiss ranked first at the fair and were housed in one barn with appropriate banners and descriptive cards. In the opinion of Judge C. R. Rhodes, the Jubilee Farms' grand champion bull and Gerber & Sons' grand champion cow were specimens of the breed that equalled any Brown Swiss cattle being shown this year.

CHESTER G. STARR, Farm Advisor.

Uncle Ezra Invests in a Cow

Bought a cow t'other day;
Man was getting short of hay,
Rather sell his wife, he said,
Or part with anything he had,
But his hay was getting low,
And the cow had got to go.
"Such a cow," says he to me,
"Is something that you seldom see;
Gives two pails twice a day,
Only eating medder hay.
Give her shorts and cottonseed,
Another pail you'll surely need.
Butter that 'ere cow will make
Can't be beat in all the state.
Her mother took first money at
The Monroe fair for butterfat."
I shaved him ten and took the cow
Wish I hadn't done it now.
Felt like I'd been stealing sheep,
'Cause I got that cow so cheap.
Of course it wa'nt exactly right
To take advantage of his plight,
But turn it round and I could see
That he would do the same to me.
I took her home and gave her feed
Of ensilage and cottonseed.
Could hardly wait for milking time,
So as to try that cow of mine.
I won't attempt to express my thoughts
But all I got was just three quarts.
Yet he told the truth when, says he,
A cow like this you seldom see.
For her bag was bigger when I got done
Than it was before I had begun;
But strip and strip it was no use.
There wasn't another drop of juice.
Next cow I buy I will not fail
To inquire the size of the milking pail.
—Exchange.

C. W. BARRON, Prop. (Address) W. S. KERR, Manager.

SOON READY FOR SERVICE

KING BOY OF PROSPECT
Dropped January 10, 1920

Sire—Anton's King Confidence (43517). Dam—Companion of Prospect(43218). A. R. 4069

King Boy is one of the best young bulls we have ever raised. His conformation is faultless. He carries good depth and width, and a top line that is as level as the floor.

His sire has six May Rose crosses and his dam has a record 764.65 lbs. of butterfat as a junior 4-year-old.

The dam of King Boy is an excellent individual and a daughter of a double grandson of Imp. Masher's Sequel.

This calf is priced to sell.

Hoard's Dairyman Farm, Fort Atkinson, Wis.

F. G. Eberhardt — Bercado Farms

will offer his entire herd of

Registered and Grade Guernseys at a

Public Sale

to be held at

Mishawaka, Ind., October 28, 1920

Mr. Eberhardt offers an excellent selection of fine Guernseys at his sale, which will be held at the Farms, located a short distance from Mishawaka, on the Lincoln Highway. The herd is on the Accredited List and animals are great producers.

Twenty daughters and sons of St. Austell Souvenir's Dany Laddie No. 39720, comprise part of the fine offering. The bull is also offered, and he is a son of Jethro's May King of Linda Vista, A. R., double grandson of the famous Imp. King of the May 9001. (A. R.). His dam is Imp. Christine of St. Sampsons A. R., milk 11,645.1 lbs., butterfat, 608.0 lbs.

Another splendid feature will be **seven daughters of Imp. Dairyman of Sarnia No. 38931,** who is a son of Governor of the Chene (A. R.) and out of Violet of Corbinez, the dam of Violet IV of Corbinez A. R., milk 16,336.40 lbs., butterfat 756.72 lbs.

Write for information about bull calves and a few females, some being daughters of Langwater Peerless.

.U A. WOODBURY, II, Burlington, Vermont

Minnesota Dairy Short Course

Teachers of dairy husbandry at northwest universities agree that at no time in the history of dairying in this country has there been a greater demand for men who understand the theory and practice of manufacturing dairy products than now. Here in Minnesota the university's dairy short courses have assisted in the training of nearly 2,500 young men. One hundred fifty attended the various short courses of the dairy school in 1919—1920. J. R. Keithley, who is in charge of the courses, says it is impossible to supply the demand for skilled dairy workers, such as butter, cheese, and ice cream makers, as reflected by inquiries received almost daily at University Farm. This unusual demand, it is felt, means an increased attendance at the courses to be given at University Farm, St. Paul, this fall and winter.

Five short courses are offered, as follows:

Creamery operators, beginners, January 3 to February 12; advanced creamery operators, November 15—27; ice cream plant operators, November 29 to December 4; cheese plant operators, November 15 to December 11; milk plant operators, December 6—11; in addition, a state conference of creamery managers will be held at University Farm on January 3. For further information write J. R. Keithley, University Farm, St. Paul.

No farmer will be downcast if he appreciates the compensations that nature mixes in with the hardships of his job.

HOLSTEINS

Last Chance to Get a Son of Sir Veeman Hengerveld

Sir Veeman Hengerveld Dodo 299077, born Dec. 26, 1919. A large, well grown fellow, fine individual, in color a little more than half white.

Sire—Sir Veeman Hengerveld, who now has 120 A. R. O. daughters, 17 of them with records above 30 lbs., and for the opportunity that he had in his younger days he has proved himself to be the greatest sire of the breed.

Dam—King Segis Alcartra Dodo Jessie. A. R. O. at 2 yrs. 10 mos., butter 19.24, milk 389.80. She is a granddaughter of King Segis Pontiac Alcartra. She is in my herd at the present time and a prospect for a large record in the future.

This bull has been Federal tested. Price $500.

W. D. ROBENS, Poland, New York.

High Grade Holstein Calves

This is the ideal time of year to start them and have them ready for pasture next spring. ⅞ pure-bred Holstein calves, $20 and $25 each. Ship C. O. D. if you wish. Safe arrival and satisfaction guaranteed. Everything in the line of registered heifers. Write your wants.

Young Bulls Backed By Yearly and Seven Day Records

We have for sale a few young bulls, up to 11 months old that are sired by our senior herd sire Finderne Pride Johanna Korndyke. He is one of the best sons of King Segis De Kol Korndyke and from Finderne Pride Johanna Rue, former world record cow with 1470 lbs. butter in 1 year. These youngsters are well grown and are all from A. R. O. dams with records up to 30 lbs. Write us for full information. We will answer promptly.

ANTRIM FARMS, - - - SYRACUSE, NEW YORK.

Carver County Holstein Breeders'

First Annual Sale

October 21 at Waconia, Minn.

56 Registered Holsteins
30 High Grade Holsteins

An Opportunity to Buy Good Ones from a Section that Never has Been Exploited

In the selection of these entries, the sale committee has made every effort to make them representative of the herds of Carver County. They have selected the registered cattle to meet the demands of the breeder who wants clean, well bred females that will sell for average rather than extremely high prices. If you want that kind, don't fail to attend.

The 30 grades are top notch cows and heifers, most of them bred for fall and winter freshening. A great many of them have excellent C. T. A. records. All of them are the result of the use of very good pure-bred sires for several generations.

Get your catalog at once from

The Minnesota Holstein-Friesian Breeders' Ass'n
406 Market Bank Building - Minneapolis, Minnesota

Two-Year-Old Sire

His two nearest dams average for 7-day production nearly 34 lbs. butter. For yearly production they average better than 1,000 lbs. butter.

He is well grown, a show animal, and free from disease. Worthy to head a top notch herd. Priced for quick sale.

He has been used in a small registered herd the past year. We want him placed in a herd where his daughters will be tested. If you need a herd sire, with 7-day and yearly production, combined with good individuality, here is your chance.

Don't delay, write us.

Hargrove & Arnold, Norwalk, Iowa

SIR JOHANNA FAYNE

42147

now has 9 daughters 20,000 pounds or over. All of his yearly tested daughters, 3½ years old or over average 21,465.1 pounds milk and 831.45 pounds butter. 17 daughters average 20,000 pounds. A few young sons left at reasonable prices. Herd under Federal Supervision.

IOWANA FARMS
DAVENPORT, IOWA

Do You Want

A 30-lb.—1000-lb. Ormsby Bull?

If you want one of that kind—and a real individual, write for our sale catalog. We are moving our herd to California and rather than take these bull calves we are offering them at sacrifice prices.

They are sons of Sir Ormsby Skylark, the sire of Duchess Skylark Ormsby, and they're from cows with records of from 27 to 40 lbs. that either have or are making good yearly records. (Several of those dams have over 30 lbs. and will finish the year well above 1,000 lbs.)

Better write today for that sale catalog.

MAXWELL FARMS - - - - WATERLOO, IOWA

HOME FARM HOLSTEIN FRIESIANS

A Son of Woodcrest Sir Clyde

Home of Contented Cows

Dispersion and Consignment Sale

Oct. 23—Sheboygan, Wis.

60 Registered Holsteins

The Model Stock and Dairy Herd

of 25 animals will be sold. This herd was established 14 years ago with 2 foundation cows and every animal in the present herd except the herd sire is a descendant of one of these cows.

Every animal of milking age has a C. T. A. record, many of them being leaders in the local association.

The Silvernagel Herd

of 22 head will also be sold. These are, with one exception, all descendants of a single foundation cow that is still in the herd. Here too, every animal has a C. T. A. record, several having produced from 10,000 to 12,000 lbs. milk in 6 mo.

Whippermann Bros. will Consign

15 head—5 of them A. R. O. cows. 5 heifers from A. R. O. dams, and 5 splendid young bulls from A. R. O. dams. All but one of the 10 females will be bred to King Abbekerk Segis 3d, he from the highest record daughter of Piebe Laura Ollie Homestead King and by the highest record son of "Count".

The Sale will be held at Lake Park Farm. Watch next issue for more complete information. For catalogs address

E. C. Whippermann, R. 1, Sheboygan, Wis.

Dodge County Wisconsin

80% of our cattle are either pure-bred or high grade Holsteins.

We have 30 bulls in service whose dams have records ranging from 900 lbs. butter in 365 days to 46 lbs. in seven days.

HOLSTEIN BULLS AND HEIFERS ! !

To make room in our barn we offer a dozen or more heifers from 1 month to 3 years of age. They are backed by some of the best families of the breed. Also a few bulls sired by King Korndyke Veeman, whose two nearest dams average over 37 lbs. butter in 7 days. Come and see them or write to

WISCONSIN STAR STOCK FARM, ED. M. SHULTZ, HARTFORD, WIS.

HILLSIDE HOLSTEINS FOR SALE

5 Record cows, 5 A. R. O. 2-yr.-olds, 5 Sr. yearling heifers all sired by, or bred to, our 31-lb.—1100-lb. Show Bull or the 39-lb.—1100-lb. Jr. Sire. Bulls ready and younger, good individuals, light colors. T. B. tested clean and right. Come or write your wants.

Farm one and one-half mile S. (Sauk Co.) KIRKPATRICK BROS., Reedsburg, Wis.

A Son of King Bess

from an A. R. O. granddaughter of Colantha Johanna Champion will suit you for a herd sire

Here's one from Johanna Rutena 3d, a 23-lb. junior 3-year-old that is one of the best long time prospects we have. Her dam, a daughter of Champion, has 30.37 lbs. as a 4-year-old and is now going at better than a 1,000-lb. rate on year test.

King Bess is from a 33-lb., 1,235-lb. daughter of S. P. O. M., so that in the 5 generation pedigree of this calf, every dam has over 22 lbs., 10 have over 30 lbs. in 7 days, 7 have year records, 4 above 1,200 lbs. and 5 over 1,000 lbs.

The calf is a dandy, straight, four-fifths white and well grown. He was born March 8.

Write or wire today about him.

W. J. GILLETT & SONS - - - Rosendale, Wis.

Young Bulls $200 to $500

Facts in BLACK & WHITE

Purebred Holstein Cows For Milk Producers

As long as farmers were content to sell whole milk for the price of the fat it contained there was room for discussion as to comparative value of the breeds. But the separator overcomes the necessity of selling milk in this unprofitable way.

For the wholesale milk trade, for delivering milk to condenseries or cheese factories, for the production of butterfat, the skimmilk being retained to feed pigs and calves, thus preventing the depletion of the soil which never fails to occur where whole milk is shipped, the Holstein-Friesian cow is most profitable.

Send for Free Illustrated Booklets.

The Holstein-Friesian Association
101 Hudson Street, Brattleboro, Vermont.

YOUR CHOICE OF 30 YOUNG BULLS OUT OF YEARLY RECORD COWS

FROM AN ACCREDITED HERD—325 FEMALES

OUR HERD SIRES

KING OF THE ORMSBYS

KING OF THE ORMSBYS is sired by Sir Pietertje Ormsby Mercedes (twelve 1000-lb. daughters) and out of Spring Brook Bess Burke 2d, the world's largest dairy cow and the only cow in the World with three 7-day records above 35 lbs. butter in connection with three year records each above 1000 lbs. Her best records are 38.22 lbs. in 7 days and 1290.93 lbs. in a year.

SIR INKA PRILLY SEGIS is a 30-lb. son of King Segis. He has 84 young daughters at Winterthur; 30 have freshened and 10 of these made above 20 lbs. at first freshening. At their second freshening they are coming back with from 25 to 28 lbs. 17 of his daughters have completed semi-official records, and 12 of these averaged 757.73 lbs. butter and 19,172.30 lbs. milk at an average age of 3 y. 6 m.

SIR INKA PRILLY SEGIS

KING OF THE SADIE VALES is sired by King Korndyke Sadie Vale (the only bull with a 40-lb. dam, a 40-lb. sister, and a 40-lb. daughter) and out of a 38-lb. "Sadie Vale" cow. Both his sire and dam are out of 41-lb. cows. The five nearest dams of King of the Sadie Vale each weighed over a ton and produced over 100 lbs. of milk a day. His three nearest dams average 40.19 lbs. butter in 7 days and 159.51 lbs. in 30 days.

JOHANNA KING SEGIS is out of a 40-lb. cow and sired by a yearly record son of King Segis. The dam of Johanna King Segis was the first cow to make 541 lbs. butter in 120 days and the second to make 40 lbs. in 7 days. Johanna King Segis now has 8 daughters with semi-official records and these average over 700 lbs. butter and 18,000 lbs. milk. All his daughters born at Winterthur will be given an opportunity to make semi-official records.

84 Cows With Yearly Records — 65 Cows Now On Yearly Test

Dispersion Auction Sale

Saturday, October 16, 11 A.M.

44 Registered Holsteins

PAULINE ALTADALE
30 lbs. butter, 470 lbs. milk in 7 days. One of the good ones to be sold.

Having rented my farm, I must close out a herd of registered Holstein cattle I have been building for 14 years. I started using a 27-lb. bull; am now using a 32-lb. bull.

There are in the herd:

2—30-lb. cows	**1—32-lb. bull**
5—daughters of 30-lb. cows	**1—30-lb. bull**
6—sisters of 30-lb. cows	**1—30-lb. bull calf**

and others headed for 30-lb. honors

I say this because I have bred, raised and developed them all and have tested only nine head so far with the above results.

Have just passed clean, the final test for the Accredited Herd list and will have certificate before the sale.

For catalogue, write me

Among these consignors are some of the leading breeders in the State. They are all progressive fellows—constructive breeders who take a pride in being able to make an offering of such class that one is quite justified in coming a long way to attend this sale.

INDIVIDUALITY The cattle have been selected carefully by a competent, disinterested judge.

HEALTH All tested. Most of them from Accredited and Federally supervised herds. Guaranteed subject to a 60-90 day retest.

BREEDING The blood of Sarcastic Lad, King Segis Pontiac, Admiral Walker, Colantha Johanna Lad, Prince Hengerveld Pietje, King Segis Pontiac Chicago, Rag Apple Korndyke—the Ormsbys, Sadie Vales, McKinley Segis' and Changeling Abbekerks—blood that has always made good—and will make good for you.

These cattle are not only of high record ancestry and fashionable breeding, but among them are a great many very promising prospects. They have breeding enough and individuality enough and a number of them look like they would make records enough to make them eligible for any State or National Sale. **They actually look the part.**

If good, dependable cattle interest you, do not pass up this sale!

An overloaded car, like the one on the left, is one of the shortest cuts to tire trouble. Each size of tire is designed to carry a certain load at a certain air pressure.

Any good tire dealer will be glad to tell you the proper size and pressure for your car. It is well to use oversize tires on cars that are often overloaded.

Tire Knowledge is Spreading Faster than Some People seem to Think

NOTHING is surer than this—that the man who bets against the informed opinion of the tire users of this country is going to *lose*.

The average American motorist is essentially practical. He may get off the track now and then.

But always you will find him going right in the end.

* * *

The trouble with the irresponsible type of tire dealer is that he allows his ideas of his customers to be bred in an atmosphere of distrust and fostered by a small coterie, not at all representative of the motoring public.

Not every motorist of whom he takes advantage always finds it out immediately.

But the time it takes for motorists generally to complete their tire education *is growing less and less every season*.

* * *

The United States Rubber Company has always stood for a *wider spread of tire knowledge* among motorists.

Doing everything it could to encourage them to greater *care* in *tire selection*. Firm in the belief that the more they know about tires, the *quicker* they will come to *quality*.

* * *

Back of the *legitimate dealer* who sells *legitimate tires* stand all the weight and influence and responsibility of the United States Rubber Company—the *largest* and *most experienced* organization of its kind in the world.

Go to him when you want a tire. For that way—and that way only—lies *economy*.

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

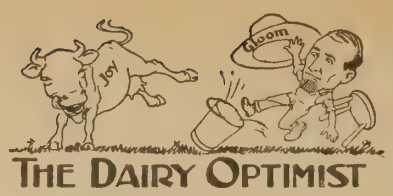
Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Getting the Last Drop



HOARD'S DAIRYMAN:—The last time the man came to try out our herd under the cow testing plan, it occurred to us to have the strippings tested to determine their real value. We use a milking machine and strip the cows after the machine has done its work. So it was easy to save the strippings in a pail by themselves. Our herd numbers twenty grade and pure-bred Guernseys.

"How much do you think the strippings tested?" This is what everybody was asking and some guessed as high as eight per cent of butterfat. Imagine our surprise and delight, then, to have the official tester say, "You are all too low. They test 11.8."

There are some who use a milking machine, but do not do any hand stripping. They depend upon rubbing the udder and manipulating the teat cups of the machine to get all of the milk. We are as careful about that as anybody can well be; and yet at a recent milking I got fully eight quarts of strippings from our herd of twenty. It proved to me conclusively that we cannot afford to stop milking when we have used the machine to the limit.

I have noticed that some cows, when I begin to strip, will not appear to have anything in the udder; but if I keep going through the motions, milk will after a while begin to flow and often I get from a pint to a quart of this valuable milk. I do not think it any fault of the one who handles the machine, and I do not know as we can blame the cow. Just how the difficulty may best be avoided I do not know, but it seems to me now that there is no better way than to do very thorough work by hand after the machine has been taken off. Surely, we cannot afford not to get the rich strippings. If there is any way to educate cows to give down better I want to know what it is.

New York. E. L. VINCENT.

THE DAIRY OPTIMIST

W. LIVINGSTON LAR

School Again

Down the lane and road they go,
Spic and span and dressed to kill;
Boys and girls, with swinging books,
Studying in parlor nooks,
Climbing up the schoolhouse hill.
Wish that I was young once more,
They've got all of life in store.

Ribbons shining in their hair,
Dresses new and shoes to match.
Whisperings of "ten times eight",
Or, "Now hurry up, we're late".
Bless the clinkin' o' the latch.
Gate swings wide and out they go,
To the place where problems grow.

See those pancakes disappear,
'Lasses gobbled up and "grits".
Readin', writin, rithmetic;
Larn 'em sure an' larn 'em quick.
Tear th' grammar rule to bits.
Wish that I was young once more,
With the whole wide world in store.

The First Pumpkin Pie

The walk out into the field.
The picking out of the big, plump yellow one.
The carrying of it back and dropping it.
The slicing of it up into small bits.
The cooking in the big pot.
The mashing.
The way mother makes the pie dough.
The flattening of it out in the pan.
The crinkling of the edges.
The pouring in of the golden treasure.
The putting on of the top.
The making of the air holes.
The red hot oven.
The peep to see if it's ready.
The delicious perfume when the door is open.
The slicing of it.
The first wonderful taste.
The pleading for just one more portion.

Close Reckoning

A city chap has been making some mathematical calculations and he finds that, for reasons not easily defined, the following facts may be set down as pure gospel:

One man in 18,975 gets an ear of really sweet corn on the cob.

One person in 97,345 manages to pick a sweet-as-sugar cantaloupe.

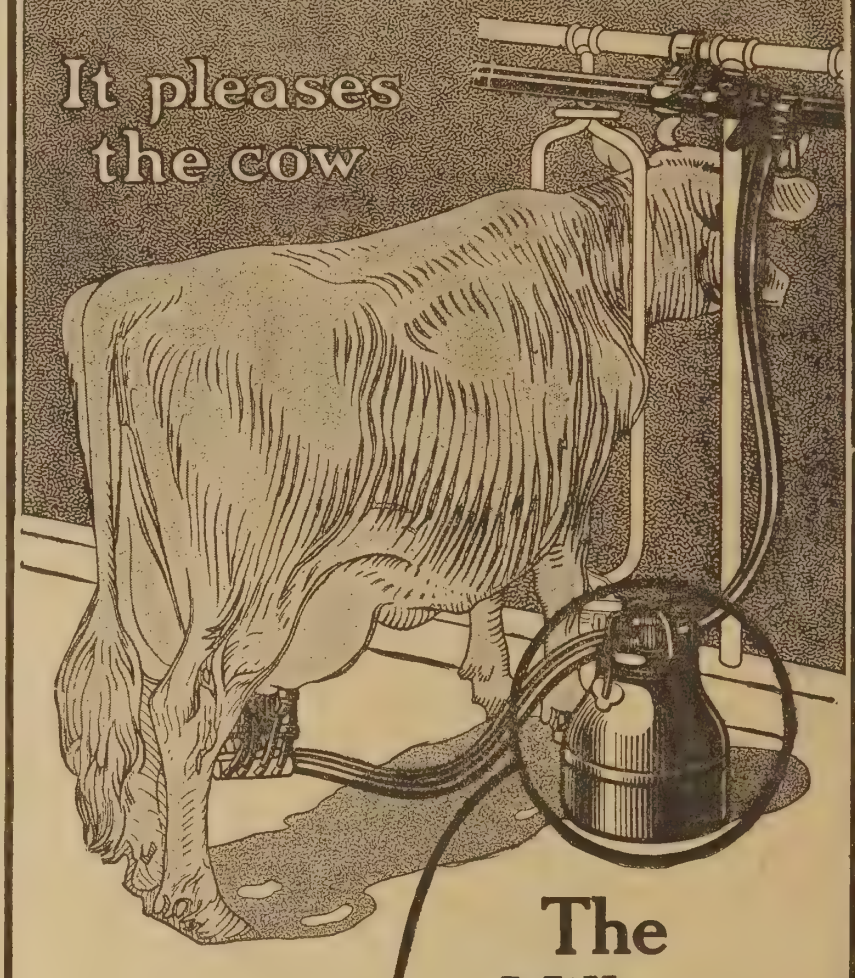
One in every 62,178 people know how to make a genuine pumpkin pie.

One in 90,000 housewives in the city can prepare good old fashioned pot cheese that tastes like the dairy farm kind.

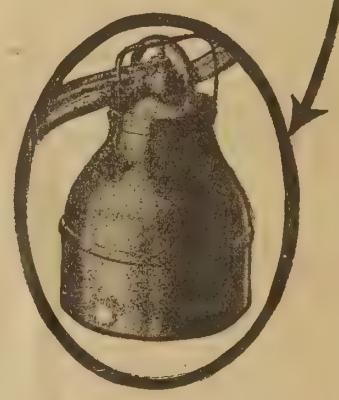
Human nature never changes much throughout the ages. For example, rhubarb will always remain an acquired taste.

Revamped History

Christopher Columbus stood on the deck of his proud ship as the first land was sighted. Suddenly he clapped his spy glass to his eyes and gave a low cry of pleasure.



"What is it you see?" the first mate demanded.



"Land, land at last!" Columbus answered, "and there are seven silos and six red barns. Make shore at once and we will alight. I want it to go down in history that I was the first to discover a dairy farm. This must be the Land of Promise. You'll always find it where there are cows and silos!"

Saying which, Columbus sent one of the cabin boys ashore for a pitcher of fresh buttermilk.

The De Laval Milker

It pleases the cow

The Milker Pail

The De Laval Milker pail embodies several important and distinctive features, making it unusually substantial and serviceable, as well as easy to keep clean. The pail is made of sanitary white metal, with nickel-plated brass fittings. It is of sanitary design with no crevices or sharp corners where bacteria might congregate, and is heavily reinforced and protected where the wear comes — made to give long and satisfactory service as other De Laval products.

The De Laval Milker unit is designed to milk one cow at a time and the pail is therefore of a size to be conveniently handled and cleaned, and permits the keeping of each cow's individual records.

The De Laval Milker is positive and uniform in action from day to day, and it is faster, more reliable and more sanitary than any other method of milking.

Wherever cows are milked the world over, the name "De Laval" stands for quality and highest value to the user.

Write to nearest De Laval office for Milker Catalog, stating number of cows being milked

DO PRODUCERS REPRODUCE?

E. A. ONSRUD, NEW HAMPSHIRE

THE Guernseys whose pictures are shown on this page are producers which have reproduced. They present visual proof that the Guernsey does "carry on" through several generations. This characteristic is not confined to one blood line, but is typical of the May Rose, Governor of the Chene, Glenwood, Masher, France, Yeksa, and all other families of the breed.

All credit for large production does not belong to the sire or dam alone. For example, Langwater Rosie undoubtedly inherited many of her splendid qualities from her famous sire, Imp. King of the May. Rose of Langwater, in turn, inherited her qualities from her sire, Jethro Bass and his ancestors, as well as from Langwater Rosie and Imp. Hayes Rosie. In other words, the proper mating of high producers has resulted in the reproduction of high producers. A Guernsey bull descended from a line of high producing ancestry will, with reasonable certainty, produce daughters of high producing qualities. Bulls of average breeding merely maintain the average of the breed, but will greatly improve the production and sale value of ordinary stock.

In reviewing the following pictures it should be recalled that the average dairy cow in the United States produces less than 175 pounds of butterfat in one year.

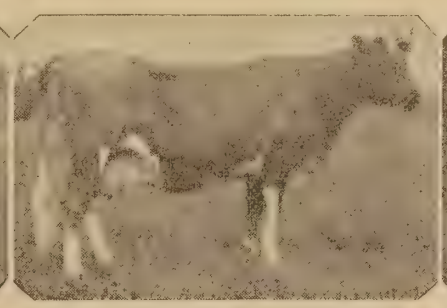
The letter following each record indicates the age at which it was begun: A—5 years old or over; B—4½ years; C—4 years; D—3½ years; E—3 years; F—2½ years; G—2 years.

The photographs are in series from left to right, in each case the animal at the left being the dam or sire of the one to its right.

Imp. Hayes Rosie has a record of 714 lbs. fat in Class A. She is the dam of 7 Guernseys, including Imp. Yeoman, Langwater Hayes Rosie, and Langwater Rosie.

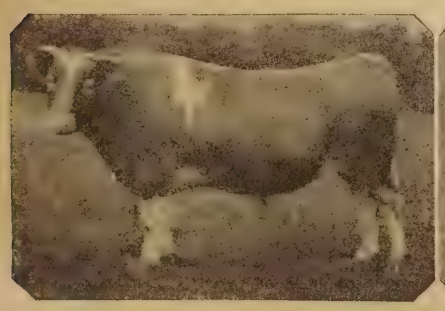
Langwater Rosie, whose record is 724 lbs. fat in Class A. She is the dam of the bull, Jethro's May King of Linda Vista and Rose of Langwater.

Rose of Langwater. This cow has records of 670 lbs. fat in Class F and 752 lbs. fat in Class D. She is the dam of 5 bulls and 3 cows, including Langwater Charity.



Langwater Charity. She has records of 635 lbs. fat in Class D and 721 lbs. fat in Class A.

Dolly Dimple has records of 703, 907, and 876 lbs. fat. She dropped six calves including Langwater Stars and Stripes and his full brother, Dolly Dimple's May King of Langwater.



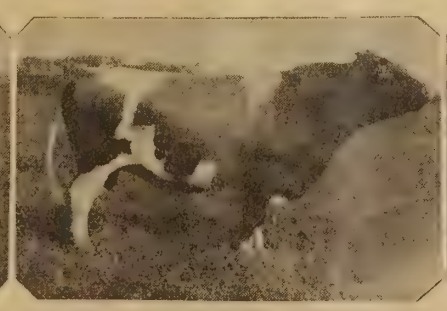
Dolly Dimple's May King of Langwater. He is the sire of nine famous sons and Langwater Nancy.

Langwater Nancy, one of the five 1,000-lb. Guernsey cows. She has four records, 631, 735, 862, and 1,012 lbs. of fat. She is the dam of Follyland Nancy.

Follyland Nancy, whose record in Class G is 713 lbs. of fat.

Governor of the Chene is the sire of 100 Advanced Register daughters including Imp. Antoinette's Queen's Prize VII.

Imp. Antoinette's Queen's Prize VII. This cow produced 416 lbs. of fat in Class E, and is dam of seven famous Guernseys, among them being King of Chilmark.



King of Chilmark, a sire whose first seven daughters have records averaging 679 lbs. fat made in junior classes. One of these is Ina's Grace.

Ina's Grace. She produced 775 lbs. fat in Class B, and is the dam of four promising Guernseys.

Glenwood Girl 6th, the first cow to enter the Advanced Register, has a record of 572 lbs. fat in Class A. The third of her seven calves was Glenwood's Main Stay.

Glenwood's Main Stay, twenty-six of whose daughters are in the Advanced Register. One of them is Lady Chesterbrook of Haddon.

Lady Chesterbrook of Haddon, has completed records of 404, 466, 530, and 479 lbs. of fat. The second of her seven calves was Benton's Lady Chesterbrook of Ingleside.

Benton's Lady Chesterbrook of Ingleside, with records of 342, 691, and 731 lbs. fat in classes DD, AA, and A. She is the dam of six calves and is still in breeding condition.

Imp. Island Champion is the sire of eight Advanced Register daughters and five Advanced Register sons. Among the sons is Imp. France's Masher 2d.

Imp. France's Masher 2d. He has twelve A. R. daughters and four A. R. sons. Among the sons are Imp. Masher's Sequel and Imp. Masher's Galore.

Imp. Masher's Galore, the sire of nineteen A. R. daughters including Linden Girl of Harbor Hill 3d with 786 lbs. of fat in Class CC. Among his five A. R. sons is King Masher.

King Masher. This bull's thirteen A. R. daughters include Masher's Elsie with 746 and 865 lbs. fat in classes E and A.

PURE-BRED DANISH RED COW, ELLA. AVERAGE YIELD BASED ON RECORDS FOR THREE YEARS: 11,572 LBS. MILK, 3.97% FAT

COWS THAT MADE DENMARK FAMOUS

JOHN J. DUNNE, DENMARK

THE area of the Kingdom of Denmark is 14,829 square miles, that of Wisconsin is 56,040. Compared with Wisconsin the area of Denmark is as 26 is to 100 or slightly over a quarter the size of the American Denmark. The peninsula of Jutland constitutes nearly 66 per cent or two-thirds of the total Danish area. The remaining third is made up by a large number of islands. It is the conviction of the writer that the present preponderance of in-breeding owes its origin to the experiences of Danish stock breeders on small islands who were forced by the geographical circumstances of their case to practice systematic in-breeding. These stock breeders learned its advantages and its drawbacks in the hard school of practical experience. Its results were invariably extreme; that is, extremely good or extremely bad.

The mean Danisn temperature is 45 degrees Fahr.; it varies from a July average of 61 degres F. to a winter average (December, January, February) about zero. On the warmest days the temperature is 86 degrees F.; on the coldest 28 degrees F. below freezing point. The average rainfall is 23.6 inches.

About half of Denmark's three million inhabitants live by agriculture. Denmark is as flat as the fens of Holland and hence the Danes love mountains as fervently as the Swiss love ships. Three-fourths of the entire Danish area is used for agricultural purposes; of this nearly two-thirds is under the plow. Of the area under the plow nearly nine-tenths is used for the raising of corn, roots, grass, and green feeds. One-eighth of the plowed area is sown with roots; these constitute the staple winter feeds for Danish dairy stock.

In the matter of high-class dairy cattle Denmark is the richest land in Europe. In 1918 there were about one million dairy cows in Denmark. The Red Danish milkers and the Jutland cattle (black and white) are the two native breeds. Both are developed with a view to the production of the maximum amount of milk and butter from a given amount of fodder. In addition to this, Danish stock breeders endeavor to produce cattle of such physique and thriftiness as will furnish salable animals when they or their offspring are put into the stalls to fatten.

Every Dane is subconsciously aware that the best milkers are to be found on the islands; good milkers are also to be found in the south of Jutland. Nearly 50 per cent of the dairy cattle are of the black and white Jutland breed.

Origin of Red Danish Milkers

In the middle of the nineteenth century the cattle on the Danish islands consisted of native breeds which were distinguished for the meagre character of their nutritive wants and their capacity for giving much milk in return for poor fare. In general the cows received poor feeds. The summer pasturage constituted the high-water mark of their nutrition in any given year; in winter their nutriment consisted chiefly of straw and a little hay. In general the heifers calved at the age of two years and the best milkers were selected for breeding purposes. The breed was small in size; an adult cow weighed 770 lbs. or less (a two-year-old heifer now weighs from 1,050 to 1,140 lbs.) and as a rule she lacked symmetry of form. Most of the cows were of a light red color, others were black or black and white. The light red breed has been known from the earliest times. It will be understood from the foregoing that stock breeding was given but scant attention in those days as the Danish islanders specialized in the culture and sale of corn.

About 1850 a change of system began to appear in Danish agricultural management. The sale of butter began to take the place of the sale of corn; the islanders began to devote their attention to improved methods of stock keeping and stock breeding. This change was quite gradual and increased in volume according as the farmers detected its pecuniary and economic advantages. The change of system began amongst the large farmers; in the course of the sixties and seventies the owners of medium sized farms followed suit. It was the advent of the milk separator and the co-operative system in the middle of the eighties that enabled the small holders to start progressive stock keeping and to buy their supplies as economically and sell their products as profitably as their well-to-do brothers. Between 1882 and 1914 no fewer than 1,168 co-operative dairies were started in Denmark. This change of system was also characterized by a more extensive and liberal use of concentrated feeds and better care both of the dairy cows and the young stock.

Improved methods of stock breeding also characterized the change of system as it was found that the native breeds inured to meagre fare did not readily give an adequate return for concentrated feeds.

Improvement was mainly derived from the importation of the better developed dairy breed of south Slesvig, i. e., the Angler dairy cattle and the north Slesvig cattle. Many large farmers imported dairy stock from Slesvig and found that the investment proved remunerative. The Slesvig cattle were easily acclimatized and being good milkers promptly gave a better return for the concentrated feeds than the native stock. Possessing in a preponderating degree the same characteristics as the native Danish breed, the Angler cattle assimilated and improved the latter. The better milking qualities of the Angler cows soon became widely known and many calves were sold by the large farmers to their less well-to-do brethren. In the course of about ten years the nucleus of pure-bred herds of dairy cattle were to be found on a multiplicity of Danish farms large and small. In some instances the pure-bred herds were Angler cattle; in others, pure-bred herds of North Slesvig cattle; in still other cases grades bred from either of the foregoing and the old native Danish breed.

In the course of the last 35 years the Red Danish Dairy Stock has been exclusively improved by means of careful selection aided by milk and herd book records from amongst the best known herds. During that period the uniformity and hereditary transmission of the breed, its symmetry of form and harmonious build have made considerable progress, whilst the yields of milk and butter fats have been considerably augmented.

The exports of butter were fairly normal until 1917, '18, '19. In 1917 the import of feeds (cottonseed cake, linseed cake, soya cake, earth nut cake, etc.) was only 25 per cent of the normal quantity and the butter only 60 per cent of the normal quantity; in 1918 the concentrated feed imports moved down to vanishing point and the butter exports were 86 per cent below the normal quantity; in 1919 the feed imports were only 21 per cent of the normal quantity and

THE FUTURE OF YOUR BOY ON THE FARM

LUMAN W. COLTON, ILLINOIS

MOST of us farmers have something that we grow or raise on our farms, in which we take particular pride. It may be any one or several kinds of pure-bred seed grains or live stock, but there is pretty apt to be at least one thing in which we excel as farmers, and for which we have some sort of good reputation among our neighbors. This thing alone often makes all the rest of our work worth while, through the advertisement that it gives our business, and the zest it puts into us. Now aside from all this, good and commendable as it may be, many of us have running about our farm something three of four feet tall, (not a hedge fence,) that is a much greater, in fact, our greatest possible, asset. I refer to the small boy on the farm, the boy in torn overalls and his first straw hat, whose greatest ambition is to grow to be a big man and do as his daddy does. In this one little figure more possibilities lie, more interest centers, and more unlooked-for actions develop, than anything else on the farm. Since these actions are even more easily turned the wrong way than the right, your greatest asset may likewise become your greatest liability.

While this youngster is still under school age you find him beginning to do all sorts of little things to help (or hinder) you in your work. He wants to hold horses and drive them, begins to find eggs in unheard-of places, has a mania for driving hogs and cattle about, perhaps—in short, anything upon which he can exercise his newly acquired authority and power. He is always watching you, imitating your actions, trying to go places that you go, and do things that you do, even though they are far beyond his strength. He delights in hauling big loads of wood, cobs, and other kinds of truck on his little express wagon, has a great fondness for a pet of some kind, sometimes several, and wants at an early age to have something to call his very own.

Just what are you doing for that particular boy of yours? Do you find time to play with him and be his companion a little while each day? When he comes to you with his troubles, which are many and loom, oh, so large in his little world, do you have time to make him forget them in something else? Or do your many cares and the numerous drains upon your time and energy keep you so engrossed that you turn away from him in impatience at such times, or send him away with a sharp word to find solace elsewhere? Right there is the place to keep close to your boy in sympathy and counsel if you are to have the proper hold upon him later. If you are very much interested in all that he does, and try to help him, he will be more interested in you and your work, and more apt to follow your vocation in later life, for where his interest is, there he is pretty apt to spend his time. If you win this interest at any early age, you have at least an even break with the other vocations that will try to entice him away from farming, the best vocation, later on. And we on the farm are learning to be more jealous of our farm boys being called away from us unless they show an especial adaptation or fondness for other lines of work. The old days are gone forever when farmers were thought to be men who did not know enough to do anything else. Instead, we cannot overeducate anyone who is to make a business of farming today, provided we preserve the proper balance in their training. By proper balance I mean to give them a broad liberal education, and let the agricultural part of it predominate as the years come when one naturally chooses what he likes best to do. Your hardest task will be to manage so that your boy will like farming better than anything else. If he really is enthusiastic about it when a boy, he is pretty apt to choose it for his life work later on.

And why do I lay such stress upon your son becoming a farmer? Simply because if he gets the right training he can make the best kind of farmer there is. Many things are born in him that will do more for him as an up-to-date farmer than anything else. Certainly there are many of our sons that show a decided talent and taste for other work. It would be wrong to try to induce these boys to stay on the farm, as wrong as to insist upon two young people getting married when neither one loves the other. It would not only go against the very natures of these boys to stay on the farm, but it would also deprive other professions of much of the best blood they receive, the bone and sinew of country strength and character, without which they would soon deteriorate. We must not be too selfish, for we have the greatest place God ever gave man for developing character—the open spaces and freedom of the country. But we ought to have our just share of the benefit of this, and it is a pitiable thing to see some good old rural couple finishing their lives alone in the country, while the large family of children they have raised is scattered through our cities far and wide, not one left to keep up the old homestead.

Here another danger appears. You may be able to keep your son on the farm by making life easy for him, lavishing money upon him, and letting him think that everything you have will come his way some day, if he will only mark time and wait. But although he stays on the farm under such treatment, he will not do himself or you justice, nor will he know the real value of money, nor the joy of achievement that follows hard, conscientious effort. How well we who worked hard for our start realize that the things that come hardest are oftentimes worth the most to us. If your son is to be a real farmer he must early learn the art of working hard while he is at it, and of doing things for himself. Just calling something his, that he has put forth no effort to help earn, will not make him self-reliant and resourceful. But teaching him to help himself will make him manly and independent.

But no boy likes to work all the time, or should, by any means. Your boy must have his hours of recreation each day to keep up his interest in his work. He wants to be with other boys some, and have plenty of fun. No matter how much exercise his work gives him as he grows older, athletics and play will develop muscles that are otherwise little used, make him more buoyant and self-reliant, and cause him to be a better all-around man. Farm boys do not get together enough. City boys are always in gangs, and can have many games where country boys cannot. They learn to play in groups and mix well while very young, while the country boy must often amuse himself.

Why cannot one-half a day a week be observed as a half-holiday on the farm, a time for games, visiting, and recreation? Community life will be one hundred per cent richer because of it; besides, the added incentive to work, and the better spirits it will put us in will make it positively a sound investment. Anyone returning from a univer-

Eastern States Exposition

THE Eastern States Exposition held its fourth annual show at Springfield, Mass., September 19 to 25. It attained a high mark of success not reached in previous years and gave further proof of the wisdom of the public-spirited founders of this great eastern agricultural movement.

The Eastern States Exposition is even more than a week's program of educational entertainment. Progressive, unselfish men of vision gave it its beginning for a well defined mission of usefulness. They saw the need of a new agriculture and a better rural life on eastern farms and have given freely that improved live stock and progressive methods of soil tillage may hasten the rehabilitation of country life in the Atlantic Coast States. The work carried on through the Exposition is the expression of their efforts to this end. The results attained in the work continued throughout the year as well as the quick growth of the annual show attests the progress already made.

⚜

Only high grade concessions are granted space at Springfield. No noisy pike detracts from good impressions gained by the thousands who come to see worth while things and no cheap "attractions" offend those who seek the inspiration which record daily attendance approaching 50,000 sought. It is gratifying to know that under such management all available exhibit space was sold this year and fifty per cent more could have been filled. Three times as much outside space was taken as in any previous year.

State Exhibits

Of high educational merit were the displays of the products of New England States. New Hampshire, Vermont, Maine, Rhode Island, and Connecticut in effective manner presented their chief industries to the crowds in machinery hall. The state-pride engendered makes this effort directly worth while and its schooling value is great. Massachusetts has a separate building and plans are under way that other commonwealths may be provided with buildings for more comprehensive and individual showings. The agricultural situation and necessity for its rejuvenation in the Bay State were set forth in the statement that Massachusetts is losing in both manufacturies and agriculture because of high debt burdens, taxes, and living costs. It is proposed to correct this condition by putting idle acres to work so that more of the $400,000,000 spent for food annually will stay in the state, reducing production costs, improving marketing facilities, standardizing products, financing farmers, and improving rural transportation and educational advantages. Only 7 per cent of Massachusetts' people live on her farms.

Knock-out Facts on "Oleo"

The Massachusetts Department of Agriculture handed "oleo" a sharp one in a large chart reporting results of a comparison at Rochester, New York, of the effects in child feeding with butter and the substitute. Seven children whose average age was 11 years were fed a uniform ration except that the butter fed in the first six months' period was replaced by "oleo" the second six months. During the third period of six months butter was again furnished. The average gain made by each child for the first period with butter was 4.93 lbs.; with "oleo" for the second, 2.89 lbs.; and with butter for the third period, 7.69 lbs. The facts were sufficiently clear that no mother who could read need be mislead by the oleo display in a packer exhibit into buying the "just-as-good-as" product for her children.

Boys Given Large Place

The Eastern States Exposition is a success through its work with boys and girls alone. Four hundred participated in the week's program—bright eyed, healthy, well informed, eager youngsters who hold the future of eastern progress in their extraordinary grasp and application of practical facts. Forty boy scouts lived in the Mohawk village erected for them, the boys' and girls' club members in Camp Vail, and the Achievement Club members in their special quarters. All week they demonstrated, lectured, and took part in competitive judging. In judging dairy cattle, Geo. Ott of New Jersey was the winner in Ayrshires; Frank Hopkins of Connecticut in Jerseys; Preston Davenport, Massachusetts, in Guernseys; and Robert Watson of Delaware in Holsteins. As a team New Jersey's representatives won first place and Massachusetts second. The achievement clubs, instigated by the exposition to cover industrial projects as boys' and girls' clubs cover those in agriculture, were in charge of O. H. Benson. No more encouraging assurance of the worth-whileness of the exposition can be found than in its work with boys and girls, nor is there better proof that it is a movement rather than simply a show.

KING PONTIAC ASIATIC ORMSBY, SENIOR AND GRAND CHAMPION HOLSTEIN BULL AT EASTERN STATES EXPOSITION
OWNED BY F. P. KNOWLES, MASSACHUSETTS

FISHERMAN'S ELLERSLIE, SENIOR AND GRAND CHAMPION GUERNSEY COW AT EASTERN STATES EXPOSITION
OWNED BY U. A. WOODBURY, VERMONT

GYPSY GAMBOGE LAD, SENIOR AND GRAND CHAMPION JERSEY BULL AT THE EASTERN STATES EXPOSITION
OWNED BY C. F. STURHAHN, CONNECTICUT

College Students Judge

Student teams from six eastern agricultural colleges contested in the judging of dairy cattle, beef cattle, horses, swine, and sheep. In dairy judging the Connecticut team won first honors; Massachusetts, second; New Jersey, third; New York, fourth; Pennsylvania, fifth; and New Hampshire, sixth. The high men in the four breeds were: R. E. Johnson, Connecticut, Guernseys; R. D. Baker, Massachusetts, Jerseys; B. M. Davis, New Hampshire, Holsteins; and R. W. Smith, Jr., Massachusetts, Ayrshires.

Live Stock

A well balanced collection of live stock represented the herds and flocks of the East. Included in the swine show were the choicest Berkshires of the county. Sheep, heavy horses, light horses, and beef cattle drew their respective adherents. One of the best milking Shorthorn exhibits ever made was seen. The dairy cattle, greatly excelling those on the grounds in 1919 both in number and quality, were as good in Jerseys and Ayrshires as will be seen this year. Holsteins and Brown Swiss are out in greater numbers at western shows while Guernseys are a standoff. The exposition presents a great show unexcelled in its uniform worth throughout.

Holsteins

Sixteen herds sent in a total of 108 black and whites. If the breed failed to lead the show in quality, it still registered a very notable improvement over its 1919 showing of 47 head. Two states qualified for the state herd class which required 10 head and which offered three prizes totalling $600. This was the first State Holstein-Friesian herd contest held; Connecticut won first and Massachusetts was awarded second. Seven herds won blue ribbons but the bulk of winnings went to two; Gardner Hall, Jr., of Connecticut taking nine and Frank P. Knowles of Massachusetts four. Five championships went to the latter herd, the only other purple winner being F. P. Cabot whose senior bull calf, Mt. Hermon Sir Colantha Robert, was made junior champion.

King Pontiac Asiatic Ormsby, Knowles' aged bull, led his class easily and was given grand championship. King Korndyke Ida Veeman, owned by the Vermont State Hospital, won second money in the aged class. He has the scale and strength to win but lacks the finish and the clean cut type of the blue ribbon animal.

Knowles' aged cow, Belle Clay Princess, was grand champion. She found her strongest competitor in the Massachusetts Agricultural College entry, Beth of Amherst 3rd, a cow exhibited as part of the College's educational display and the winner among the senior Advanced Registry entries. The champion is of the medium size, quality type, and showed more finish than the College entry. For junior champion the senior yearling, Pearl Asiatic, from the Knowles herd, was chosen over two blue ribbon winners from the Hall herd and the first senior calf, Nutmeg Lady Lass, owned by F. M. Peasley of Connecticut. Hall won four of the five usual group classes, losing only to Knowles on graded herd.

The awards were made by J. C. McNutt and are as follows:

Bull 3 years or over—1, Knowles on King Pontiac Asiatic Ormsby; 2, Vermont State Hospital on King Korndyke Ida Veeman; 3, Northampton State Hospital on Dutchland Pietertje Sir Colantha; 4, Hall on King Kornkdye Fannie Veeman; 5, Walker on King Valdessa Finderne. Bull 2 years, under 3—1, Dept. of Public Charities on Sir Artis Colantha Pontiac; 2, Northampton Hospital on King Tehee Fayne Paula Walker; 3, Shaw on Star Boy Shephard. Bull 1 year, under 2—1, Hall on K. K. F. V. Ormsby; 2, Hough on Count Paul Ladoga Posch; 3, Waterman on Elm Farm Valdessa King Fayne. Senior bull calf—1, Cabot on Mt. Herman Sir Colantha Robert; 2 and 5, Hall on Storrs King Korndyke Fayne and Fannie Veeman King; 3, Vermont Hospi-

tal on V. S. H. King Korndyke Joe; 4, Knowles on King of the Hill Ormsby; 6, Broadlie Farm on Broadlie Echo Alcartra De Kol. Junior bull calf—1, Hall on Braeside Amarilla King; 2, Vermont Hos. on V. S. H. King Korndyke Veeman; 3, Northampton Hos. on Northampton Paul Colantha; 4, Peasley on Nutmeg Colantha Johanna Lad; 5, Dodge on Zady Farsedo Butter Boy.

Cow 4 years or over—1 and 4, Knowles on Belle Clay Princess and Carrie Pontiac Clothilde; 2, Mass. Agr'l College on Beth of Amherst 3rd; 3, Hall on Lillie De Kol Pietertje 2d; 5, Dodge on Dodge Farm Bernice; 6, Pickering on Martia McKinley. Cow 3 years, under 4—1, Vermont Hos. on Waterbury Elnora De Kol; 2, Stoddard on Gretna Wallsu Hinke; 3, Pickering on Spring Valley Queen Pontiac; 4, Walker on Balsam Zelea Segis. Heifer 2 years, under 3—1, Vermont Hos. on V. S. H. Rag Apple Nettie; 2, Pickering on U. S. Mutual Homestead Oak De Kol; 3, Knowles on Blanche Margo Pontiac; 4, Dodge on Dodge Farm Korndyke Arcturia; 5, Northampton; 6, Walker on Balsam Colantha Mercedes De Kol. Senior yearling heifer not in milk—1, Knowles on Pearl Asiatic; 2 and 4, Hall on K. S. P. W. Manor Beets and K. K. F. V. Agnes; 3, Harper on Korndyke Alcartra Albino; 5, Dodge on Zady Fayne Alcartra 2d; 6, Harper on Alcartra Pauline Twisk. Junior yearling heifer, not in milk—1, Hall on K. K. F. V. Helen; 2, Northampton on Pauline Eva Pietertje; 3, Knowles on Ormsby Countess; 4, Dodge Farm on Albina Farsedo Ormsby De Kol; 5. Waterman on Elm Farm Missie Cornucopia; 6, Vermont Hos. on V. S. H. Sadie Vale Pride. Senior heifer calf—1, Peasley on Nutmeg Colantha Buttercup; 2, Vermont Hos on V. S. H. Sadie Vale Nettie; 3, Knowles on Highlawn Rosewood; 4, Waterman on Highlawn Sylvia; 5, Hall on K. K. F. V. Pietje; 6, Dodge on Gracie Farsedo Ormsby. Junior heifer calf—1, Hall on K. K. F. V. Inka; 2, Waterman; 3, Peasley on Nutmeg Eveline; 4, Dept. of Public Charities; 5, Broadlie on Broadlie Beauty Pietertje; 6, Northampton Hos. on Countess Pietertje

AGED COW CLASS IN THE AYRSHIRE SHOW AT THE EASTERN STATES EXPOSITION—ONE OF THE BEST EVER SEEN IN AMERICA. THE WINNERS ARE IN THEIR ORDER OF WINNING FROM LEFT TO RIGHT

Thurston. Cows having official yearly record begun at 5 years or over—1, Mass. Agr'l College on Beth of Amherst 3rd; 2, Dodge Farm. Cows having official yearly record begun under age of 5 years—1, Hall on Lillie De Kol Pietertje 2d; 2, Dodge Farm.

Graded Herd—1, Knowles; 2, Vermont Hos.; 3, Walker. Young Herd—1, Hale; 2, Knowles; 3, Vermont Hos.; 4, Northampton Hos.; 5, Dodge. Calf Herd—1 and 2, Hall; 3, Vermont Hos.; 4, Walker. Get of Sire—1 and 3, Hall; 2, Knowles; 4, Vermont Hos.; 5, Northampton Hos. Produce of Cow—1 and 5, Hall; 2, Dodge; 3, Vermont Hos.; 4, Walker.

Senior and Grand Champion Bull—King Pontiac Asiatic Ormsby. Junior Champion Bull—Mt. Hermon Sir Colantha Robert. Senior and Grand Champion Cow—Belle Clay Princess. Junior Champion Cow—Pearl Asiatic.

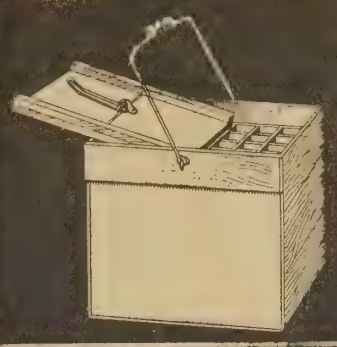
Guernseys

Guernseys made the lightest showing of the breeds. The average quality of the exhibit was above that of earlier ones this season, but the number was low, seven herds contributing 62 head. The judging was done by Mr. F. L. Ames on the day following the record auction at Langwater.

The strongest ring of the day was the aged bull line-up. Mr. J. L. Hope made the awards because two Langwater bulls were entered. Langwater Renown, exhibited by George A. Cluett of Massachusetts but recently purchased by E. F. Price of New York, led the group. Langwater Croesus, exhibited by A. Schlehuber of Massachusetts, was runner-up. These two bulls have the size and Guernsey character which distinguish the breed from the type of the males of its companion island breed, to which some show rings have seemed to incline. Renown was popular winner. The two Syracuse aged leaders, owned by U. A. Woodbury of Vermont and Emmadine Farm, New York, followed in third and fourth places in the order of their winnings at the New York Fair. Mr. Ames chose Woodbury's junior calf, Deanie's Marose of Appletree Point, to lead the juniors and made the aged sire grand champion.

The milking classes were not strong. Fisherman's Ellerslie, from the Vermont herd, a three-year-old, showed the most breed type with production and was chosen for highest honors. The younger entries included a number of good ones, particularly among the calves. Emmadine Adah, Syracuse junior champion, lost in her class to Appletree Point's Dolly Dimple but the Empire State herd came back in the championships and won the purple with the senior calf, Emmadine Buttercup.

Winnings were well divided with U. A. Woodbury, the heaviest winner with nine firsts and three championships. George A. Cluett won two blues and two championships; Emmadine Farms, two and a championship; Hillswold Farm, four firsts; and A. Schlehuber, one first and three seconds. The detailed winnings follow:



Bull 3 years or over—1, Cluett on Langwater Renown; 2, Schlehuber on Langwater Croesus; 3, Woodbury on Pencoyd's Secret Marose; 4, Emmadine on Inspector of Indian Bridge; 5, Eden Hill Park Farm on Ma Charmanter Governor; 6, Hillswold on Warrior of Hillswold. Bull 2 years, under 3—1, Woodbury on Rose's Golden Cherub; 2, Bar None Ranch on Wyebrook Attain. Bull 1 year, under 2—1, Schlehuber on Cavalier's King of Almanor; 2, Woodbury on Cherub's Bopeep Prince; 3 and 4, Emmadine on Emmadine's May King and Gay Lad of Emmadine; 5, Hillswold on Recorder of Hillswold; 6, Cluett on Green Meadow Warrior. Senior bull calf—1, Cluett on Green Meadow Viceroy. Junior bull calf—1, Woodbury on Deanie's Marose of Appletree Point; 2, Cluett on Green Meadow Viking; 3, Hillswold on Rollo of Hillswold.

Cow 4 years or over—1, Hillswold on Hillswold Dorfsie; 2 and 4, Woodbury on Follyland Rose Queen and Morning Glory of Appletree Point; 3, Hillswold on Hillswold Ramona. Cow 3 years and under 4—1 and 3, Woodbury on Fisherman's Ellerslie and Imp. Duchess of Prospect A. R.; 2, Schlehuber on Uplands May Rose; 4, Cluett on Green Meadow Doris. Heifer 2 years, under 3—1, Woodbury on Katherine Ridgeway; 2, 3, and 4, Cluett on Lady Alden, Green Meadow Golden Viola, and Foremost Branford Strawberry. Senior yearling heifer, not in milk—1 and 5, Hillswold on Hillswold Belclaye and Hillswold Rosemary; 2, Woodbury on Flora of Buena Vista; 3 and 6, Cluett on Green Meadow Hope and Green Meadow Blossom; 4, Schlehuber on Ruby's Pearl of Almanor. Junior yearling heifer, not in milk—1 and 2, Woodbury on Nancy's Betsy of Belleview and Peerless Bonnie of Rockstone; 3 and 4, Emmadine on Masher's Gladys of Emmadine and Emmadine Laura Belle; Bar None Ranch on Daisy's Dally. Senior heifer calf—1, Emmadine on Emmadine Buttercup; 2, Woodbury on Golden Secret's Duchess of Appletree Point; 3 and 4, Hillswold on Hillswold Diana and Hillswold Janet; 5, Emmadine on Emmadine Gladys. Junior heifer calf—1 and 3, Woodbury on Appletree Point's Dolly Dimple and Appletree Point's Aimable; 2, 4, and 5, Emmadine on Emmadine Adah, Emmadine Mary Ann, and Emmadine Daisy; 6, Schlehuber on Zither of Indian Ridge. Cows Produced 400 lbs. fat in tests begun between two and under 5 years—1, Hillswold on Hillswold Dorfsie; 2, Schlehuber on Upland's May Rose.

Graded Herd—1, Woodbury. Young Herd—1, Hillswold; 2, Emmadine. Calf Herd—1, Woodbury; 2, Emmadine. Get of Sire—1 and 4, Woodbury; 2, Hillswold; 3, Emmadine.

You can safely put all your Eggs in one Basket if you use

FARMER'S FRIEND EGG CARRIER

Made of wood, nicely painted and finished, very strong and durable and will last for years. Has adjustable lid and automatic lock. Regardless of quantity of eggs in carrier, they are held firmly—will not jostle and break. Each carrier holds 12 doz.

When eggs are delivered fillers can be folded, placed in bottom of carrier, which can then be used to take home groceries or other purchases.

Prices F. O. B. Chicago

Each	$ .80	4 doz.	$8.80 per doz.
½ doz.	4.50	8 doz.	8.70 per doz.
1 doz.	8.90	12 doz.	8.60 per doz.

Above prices guaranteed until November 15, 1920

Send for Big Mail Order Dairy Catalogue.

"Dandelion Butter Color" Is Big Prize Winner

Be sure and use Dandelion Brand Butter Color and give your butter that June golden shade which brings top prices—pleasing the eye and tempting the palate.

The High Scores of 1920

In many of the State Buttermakers' Shows, first awards were won by users of old reliable "Dandelion Brand." You can't miss by giving a trial to the butter color which helps 90% of the successful buttermakers of America.

Never gets rancid. **Doesn't affect flavor.**
Doesn't color the buttermilk. **Leaves no sediment.**
Colors more butter to the gallon.

Dandelion Brand Butter Color is purely vegetable and fully meets requirements of all Food laws—State and National. Ask your jobber for prices.

WELLS & RICHARDSON CO., Inc. **BURLINGTON, VERMONT**

Story of the California Raisin "Trust"

Farmers Have Absolute Control of Crop. Co-operation Rescued Declining Industry.

HERMAN STEEN, ILLINOIS

THIS is the story of the only farmers' trust in the world. The California Associated Raisin Company—an organization of 10,000 farmers—markets 90 per cent of all the raisins produced, thus having a virtual monopoly over the industry. Through agreements with its members, it has absolute control over their crops and it fixes prices. The affairs of the company are directed by 25 men who operate under a voting trust agreement. Finally, it has been investigated by the Federal Trade Commission and hauled into court by the Department of Justice. No other farmers' company can claim so many distinctions along this line. All of which is cited as proof of the statement that the raisin growers' company fulfills the requirements of a trust and is the only farm-raised and farm-managed trust in existence.

Different Kinds of Trusts

But Wylie M. Giffin, president of the raisin growers, objects vigorously to his organization being classed with other trusts. "We've never pulled the rough stuff with which the lumber trust, the steel trust, and others are commonly credited," he said to me. "For instance, we have never done anything to restrict production. Since the California Associated Raisin Company was organized in 1912, the production of raisins in California has increased 500 per cent. This increased production can justly be credited to our organization, because the fair prices secured for raisins have resulted in a tremendously increased acreage devoted to raisins.

"We have not attempted to stifle competition; we pay no attention to growers outside our organization, except as we occasionally ask them to join. We market our own raisins and nobody else's and let the independent growers handle theirs as they see fit. If they want to join, they are welcome on the same terms as all the rest of us; if not, we are sorry that they cannot see things the way we do.

A Benevolent Trust

"We have not charged exorbitant prices for raisins. Our prices are fixed high enough to make the growers a reasonable profit and low enough to move the crop. Raisins are not a necessity, you know, and people would refuse to buy if we charged too much. In fact, during the past two years, independent buyers and speculators have paid from two to seven cents per pound more than the association price, and our members have accused us of laying down on the job.

"Call us a trust if you want to, but we're a benevolent one. Give us credit for stimulating production, providing efficient distribution and eliminating speculation, and at the same time treating the consumer square."

History of Raisin Industry

All the raisins produced in the United States come from California, and 80 per cent of them from a district in the San Joaquin Valley within 35 miles of Fresno. Nearly 90 per cent of the California raisins are marketed under contract through the growers' own company.

The history of raisin growing in the San Joaquin Valley is a sorry tale. It dates back to 1884, when the first vineyards were set. The first planting brought large crops, followed by a large boom in raisins, and equally wild boom in land, and a smashup. In 1891 raisins sold for one cent a pound. Growers' organizations of one sort or another were formed, and followed one another into the graveyard. By 1905, conditions became so bad that 20,000 acres of vines were uprooted, each grower pulling up a certain percentage of his holdings. Even then the packers could not market the crop satisfactorily.

Under-consumption

"It was not over-production and never was," declares Giffin. "It was under-consumption caused by a vicious, inefficient, and out-of-date distributive system. They used to talk over-production when 35,000 tons was the size of the crop, and a cent and a half per pound was the price. Now we sell 200,000 tons above ten cents and the supply is licked up clean before the season is over. In 1907, when one of our defunct associations was functioning fairly well, a 110,000-ton crop was cleaned at 5½ cents per pound; the year a considerably smaller crop could not be moved for 2½ cents. It was a case of bad merchandizing."

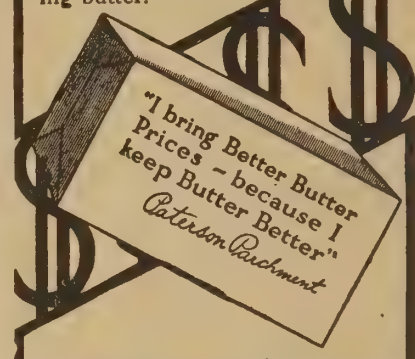
In 1912 the morale of the raisin growers was the lowest in the history of the industry. The growers were too discouraged to even think of organizing. Another organization was launched, but had the bankers and business men of Fresno not backed the proposition vigorously, it would not have been started even.

An Ambitious Program

The resulting product was the California Associated Raisin Company. It was the most ambitious plan ever tried by any of the numerous raisin organizations. It was proposed to require the members to turn all their raisins over to the company which would sell them; in other words, the growers would produce the raisins and the company would sell them. It was proposed to pay every grower the same price for the same quality of raisins, no matter when they were sold. It was proposed to fix the price of raisins at the cost of production plus a fair profit—more to be sold for less. It was agreed that the organization should not turn a wheel until at least 75 per cent of the raisin growers had signed contracts binding them to deliver all of their raisins for five years to the association.

A good story might be written about the campaign to secure growers' signatures to contracts. There was little enthusiasm, because every grower in the district had seen previous organizations rise and fall. If enthusiasm was lacking, courage was not. The wisest growers knew that if this organization failed there would be more foreclosures than ever in the San Joaquin Valley. By the time the raisin crop was ready to be moved, 77 per cent of the raisins were pledged to the association for five years.

Financing the Company



The biggest part of the job was to finance the new company. It had $1,000,000 of capital stock authorized, the plan being for every grower to subscribe $10 per acre of vineyard. Some growers subscribed more, some less, others nothing at all. Finally bankers and business men had to take a good-sized slice of the stock. It has since been generally recognized in California that right there the raisin growers committed their only serious blunders—(1) they allowed outsiders to join with growers in their organization; (2) they formed a capital stock corporation instead of a non-profit co-operative association without capital stock. The reason why the first was a blunder is quite obvious; the second question is one of the fundamental features of California

NEW MILLION AND A HALF DOLLAR RAISIN PROCESSING PLANT AT FRESNO, CALIF., OWNED AND OPERATED BY THE RAISIN GROWERS OF THE SAN JOAQUIN VALLEY OF CALIFORNIA

Increase Your Butter Profits

Money-making dairymen everywhere are looking to the *quality* and *cleanliness* of their butter. They know butter brings top market prices when it is clean, sweet and pure. They know that their trade increases in proportion to their care in wrapping and protecting butter.

Paterson Pioneer Parchment Paper

makes butter *taste* better, *keep* longer and *look* more appetizing. And don't forget that *looks* go a long way toward selling butter profitably. The best protection for butter and for good butter prices is Paterson Pioneer Parchment Paper. *Prove* it today.

Write for free samples and booklet "Better Butter". Contains money-making ideas for every dairyman.

co-operation and will be discussed in a separate article.

The raisin crop, previous to 1912, had always been handled by the packers who processed and packed the crop, later selling it to the wholesale distributors. These packers were not only packers, but speculators, also. In fact, the words packer and speculator can be used interchangeably, so far as the California fruit business is concerned. Their practice was to buy the crops at the lowest possible prices, and, if the crop looked too large, to refuse to buy more than they could handle easily. The rest was allowed to spoil. There were ten principal raisin packers previous to 1912, in addition to a number of smaller speculators. The ten were known to the growers as the High Five and the Low Five.

The High Five and the Low Five

It was to the High Five and the Low Five that Wylie Giffin, president of the California Associated Raisin Company, went to in 1912 to sell the 77 per cent of the raisin crop controlled by the new raisin association. He offered to sell the 77 per cent for a period of five years for three and one-fourth cents per pound, this figure being based on the cost of production. The offer was scornfully refused.

"That was most fortunate," says Giffin. "It was fortunate that our dreams of somebody else doing our job did not come true. It was most fortunate that we were compelled to do the job ourselves. Had we not been compelled to do the job ourselves, had the packers accepted our offer and taken our initiative away from us, our association would not today be in existence. The High Five and the Low Five would still be dominating the raisin industry."

The association took the raisin crop that fall as it was harvested, and sold it direct to wholesale grocers or to brokers who supplied the wholesale trade. When the growers delivered raisins they were given a first payment. As it takes some time to get money from shipments, the scanty supply of cash in the raisin association till was soon licked up. Growers were induced to take notes—even one-day notes. A few with more courage took seven-day notes, and a few hardy souls accepted 90-day notes. "The banks believed in us and encouraged us until we wanted to borrow money," Giffin said.

Over the Hilltop

Before that first season was over, raisin growers held over $1,000,000 of the association notes. These notes were all paid when due, and the association managed to keep its head above water. The price of three and one-fourth cents was obtained for every pound of raisins produced. The raisin growers were crossing the valley of uncertainty and mounting the hilltop of success.

The next year a few more growers had courage, and some had a little faith. But no matter how they felt toward the association they were compelled to market their raisins through it because of the ironclad five-year contract they signed. The packers and speculators, now alarmed at the strength of the organization that snatched 77 per cent of the raisin crop away from their grasp by one stroke, stirred up all kinds of dissensions. Members of the association were induced to sell their raisins to speculators, in spite of their contracts. The contracts were then taken to court and sustained in every case—the most sweeping legal victory ever obtained up to that time for the cause of co-operation in California.

Eight Years of Success

The raisin growers' organization continued to grow stronger until now it controls close to 90 per cent of the raisins produced in the San Joaquin Valley. It always paid more than the three and a quarter cents that was fixed the first year. In 1919 the average price realized was 10¼ cents per pound. This year it is fixed at 15c.

At first, prices were fixed on the basis of the cost of production plus a fair profit. This was soon abandoned because it was not practical. One year the cost might be two cents per pound, the next year five cents per pound. The consumer who eats raisins cares nothing for the cost of production; he adjusts his purchases to his wants and the price he must pay. The raisin growers soon were back on the law of supply and demand which they discovered was not so bad when the manipulation was removed from it.

Increased Production

The prosperity which attended the raisin industry when speculators were eliminated and prices stabilized led to a tremendous rush into raisin growing. The crop increased from 35,000 tons in 1912 to 190,000 tons in 1919 and 210,000 tons in 1920. It will probably be 300,000 tons within five years. Yet these crops have all been marketed successfully, none being carried over from one year to the next. Before the co-operative association was formed, the speculators were never able to market all of the crop, though it was only one-fifth of the present production.

The past year or so has seen an unusual boom in raisins, due to prohibition. As one man remarked, "raisins are now our national drink", and this demand has sent raisin prices skyward. The association officials believe that a 20-cent price could have been secured for the whole crop, but felt that it was too high to be just.

In order to sell the increased volume of raisins caused by the larger acreage, the raisin association found it necessary to advertise to create a larger demand. The first year $100,000 was used for advertising, $150,000 the second, $440,000 last year, and $600,000 this year. "It has meant success to us, for it has solved the problem of over-production," says Giffin.

Plan of Organization

There are about 10,000 stockholders in the California Associated Raisin Company. Most of them are growers, but a good amount of stock is owned by bankers and business men. About $4,000,000 of stock is outstanding. The new contract with the growers provides that each grower shall own $4 worth of stock for each ton of raisins

A Gas-Power Washer Complete

The Maytag Multi-Motor Washer is operated by a self-contained gasoline engine. It brings to the home without electricity all the speed and convenience of the finest electric washer.

These cool Fall days you can use it in the shed, or cellar, or in the kitchen. An 8-foot flexible, metal exhaust pipe fitted with a patented muffler carries the exhaust out of doors.

The Maytag Multi-Motor Washer cleanses everything from a heavy quilt to a dainty waist. Operates easily. Costs but a few cents to do an entire washing.

Has a reversible power wringer—swings to any one of three positions without moving the washer. Equipped with positive safety release. Rolls adjustable to any tension.

See it today at the local dealer's store. Also write for a FREE copy of our famous Household Manual.

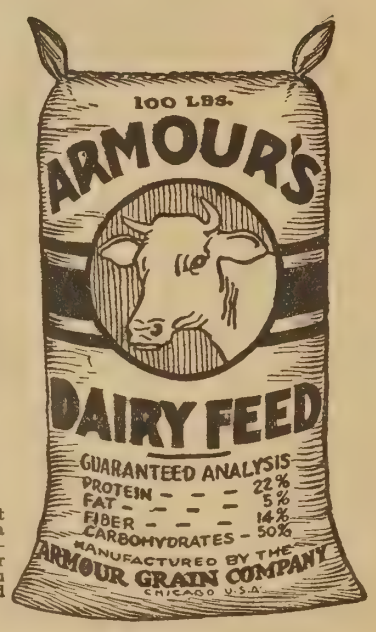
ARMOUR'S DAIRY FEED

Feed That's More Easily Made Into Milk



IF you could take milk apart, you would see many strange salts and chemicals rarely observed by the human eye.

To make this milk the cow has to eat food containing these elements.

On a casual glance at a ration, no one can tell whether they are present or not. Milk production may be curtailed because the cow is starved for one single element.

Armour's Dairy Feed is blended by nutrition experts, who *know*, by chemical analysis, just what's going into the bags. You get feed which is most quickly and easily transformed into milk.

Perhaps this is why few dairymen who once try Armour's ever change to another feed. And a trial will convince you.

Examine Armour's Dairy Feed at your dealer's, or write us for a sample and state in what quantities you usually buy. The Armour dealer will gladly supply you with Armour's Stock Feed and Armour's Hog Feed also.

ARMOUR GRAIN COMPANY
CHICAGO, U.S.A.

produced. Dividends of six to ten per cent are paid annually. Every member must own stock, and no raisins are handled for non-members.

The grower signs up for stock, he also signs away his voting power to a board of trustees, 25 in number. These trustees are elected by the stockholders by districts. They in turn elect a board of seven directors who manage the affairs of the company. This is the voting trust, an idea borrowed directly from Big Business. "It is not democratic, but it works," says Giffin. It has been essential. Formerly, in order to transact business, we had to call a stockholders' meeting. In a large gathering the fellow who could yell the loudest got the most attention. Now the trustees are elected by districts by the growers themselves—the trustees are practically all growers, too, and they can give their undivided attention to the affairs of the company. They are a deliberative body. This plan of organization is a sort of benevolent autocracy, but it has worked out best."

The reason the raisin association has proved successful, according to Giffin, is that it has eliminated speculation from the raisin industry and put it upon a stable, substantial basis. "The old system under which the growers sold their product direct to the packer or speculator was inefficient and would have destroyed the industry had it continued," he said. "The consignment system which was used for several years was vicious and rotten; it was the mother of speculation, and the growers were nearly always robbed. The only system which has worked out is the present one, under which the farmers grow the raisins, the association prepares them for market and sells them to the wholesale trade. The speculators are entirely eliminated from the cycle."

"But how about the high retail prices for raisins?" I asked.

"It is due to profiteering by the wholesale and retail grocers," was the reply. "Consumers pay from two to three times what we get for raisins. We have gone as far as we can legitimately; it's up to the consumer to meet us part way. The retail price of raisins is no concern to us except as it affects the use of them. Some day we may join the other co-operative associations out here and form a wholesale organization for all of our products, but we're a long ways from that yet."

Raisin Growers in Court

During the past two years the raisin growers have been in almost continuous hot water from government sources because of the high degree of control it has over the industry. They have been investigated by the Federal Trade Commission and are now prosecuted by the Department of Justice under the Sherman anti-trust law. It is a fact, not disputed in California, that these prosecutions were instigated by a firm of speculators in San Francisco who were one of the High Five, when speculation ran riot in the raisin business.

The speculators attacked the raisin growers at four points: (1) percentage of crop controlled; (2) on refusal to sell raisins to packers and speculators; (3) on guaranteeing to the grocery trade a stable price to prevail through the year; (4) on fixing prices on raisins through the plan of a "firm-at-opening" price.

The raisin growers defended their position stoutly. Several of the other co-operative organizations came to their aid, as also did the State Department of Markets; this latter action was approved by Governor Stephens. In fact, Col. Harris Weinstack, head of the State Department of Markets, went to Washington to assist in the defense. The raisin growers were sustained on the right to control 90 per cent of the acreage and on the right to refuse to sell to packers or speculators. They lost the claim to establish a guaranteed price to wholesalers to be effective through the year, and lost the "firm-at-opening" price. According to Giffin, they were ready to abandon the "firm-at-opening" price plan, and can operate without the guarantee to wholesalers.

The Department of Justice has now hauled the raisin growers into court to answer charges of violating the anti-trust law. The raisin growers might have avoided the whole trouble had they incorporated under the non-profit co-operative plan.

The raisin growers are going to fight the matter through. "Our fight to organize and fix prices is attacked, just as the milk producers' right to organize has brought farmers into court all over the United States," they say. "Co-operative marketing associations have their existence at stake in this fight, which is engineered by the speculative interests to destroy us."—Copyright, 1920, by Standard Farm Papers, Inc.

Washington Holstein Breeders

A meeting was held in Ellensburg, Washington, recently which pure-bred Holstein breeders attended for the purpose of organizing a Kittitas County Holstein Club. The objects of this club were explained and the meeting was enthusiastically organized. It is now only awaiting the organization of the state club to begin active operations.

Much to the gratification of all present, there was no dissenting voice on the probable cost of this state organization. It is a new thing out here and we can only estimate our cost per head because we do not know in the first place how many head there are or how much this work is going to cost, but the organizers feel sure they are conservative in the cost so it will stay within the prescribed limits.

At the State Fair at Yakima the state organization is expected to be organized in the rough so that before November 19th, at the Pacific International at Portland, Oregon, the state organization will be in perfect running order to receive the address of President Aitken who is expected at that time. It is hoped that the rest of the counties of the state will come in as enthusiastically as did Kittitas. Yakima County was very active in its organization, but so far the palm must be handed to Kittitas.

Washington. F. S. STIMSON.

"The farm kitchen and the furnace room are probably the best places to cure small amounts of seed corn," says R. A. Moore of the Wisconsin College of Agriculture. "By using some of the simple hanging devices enough seed corn for an ordinary farm can easily be cured. An attic which can be ventilated, which has a chimney passing through it, or which is located directly over a heated room so that it can be kept at a fairly uniform temperature, is a very good place to cure corn. During the warm fall weather the attic is usually heated from the rays of the sun upon the roof and the effect upon the corn is equal to that of fire drying, provided the quantity to be cured is small. If a large quantity of corn is to be cured in the attic it will be necessary to warm the room with a small stove. There must be a good circulation of air through the room to cure the seed in the best manner. For larger amounts of corn a seed drying house is desirable."

September Milk Prices

The following table from the U. S. Bureau of Markets' report presents a comparison of the net prices received during September by producers for fresh milk (test 3.5%) f. o. b. local shipping points or milk plants operated by fluid milk dealers:

Sections	Range of Sept. prices per cwt.	Comparison of average prices 1920 Aug.	1920 Sept.	1919 Sept.
United States	$2.10–$6.05	$3.64	$3.79	$3.53
New England	2.50– 5.12	4.12	4.30	3.81
Middle Atlantic	2.84– 4.35	3.62	3.87	3.45
E. North Central	2.30– 4.07	3.47	3.49	3.51
W. North Central	2.10– 4.42	3.42	3.45	3.33
South Atlantic	3.25– 6.05	4.43	4.45	3.81
E. South Central	2.91– 4.80	3.30	3.43	3.23
W. South Central	2.87– 5.24	3.96	4.39	4.13
Mountain	2.91– 3.49	3.23	3.34	3.24
Pacific	3.10– 4.43	3.62	3.68	3.34

Producers' and Consumers' Prices

Prices paid producers during September averaged 15c higher than for August and 26c higher than a year ago. The next table shows for certain representative city markets the prices of standard grade milk (Grade B, test 3.5%) received by producers and paid by consumers during the month of September:

	Producer receives per cwt.	Consumer pays per qt.	Butterfat allowance per lb.*
Birmingham, Ala.	$4.56	$.22	$1.28
San Francisco, Cal.	4.51	.17	.29
San Diego, Calif.	4.45		
Denver, Colo.		.13	
New Haven, Conn.	4.85	.16	.40
Washington, D. C.	4.35	.16	.40
Jacksonville, Fla.	5.18	.25	.58
Atlanta, Ga.	5.82	.25	flat
Chicago, Ill.	4.20	.16	.40
Indianapolis, Ind.	2.92	.14	.65

Seattle, Wash.	3.58	.14	.70
Wheeling, W. Va.	4.00	.16	.50
Milwaukee, Wis.	3.75	.13	flat
Cheyenne, Wyo.	2.80	.15	.80

*In actual practice this allowance is made on the basis of a certain price per hundred of milk of a certain test, one-tenth of the price per pound fat being paid or deducted for each one-tenth per cent above or below the stipulated basic test. Where the word "flat" appears in this column, it means that no allowances are made for butterfat content but the milk must not be lower in test than legal requirement and must not be adulterated or skimmed.

The prices quoted for producers are for milk testing 3.5 per cent and delivered f. o. b. city, from which must be deducted the various transportation costs in order to get the actual price. In certain cities the prices given apply only to that portion which is considered as the producers' average production, the surplus being either handled by the producers' association or the dealers at somewhat lower prices.

The prices given are here reduced to the comparable basis of 3.5% fat, as different cities vary from 3% to 4% as the basic fat test. To reduce the prices per hundredweight to either a gallon or a quart basis divide by 11.63 or 46.33, respectively.

The prices paid by consumers are for average testing milk delivered in quart bottles. It is the grade of milk most generally sold in these cities and in most cases is for pasteurized milk.

Country Shipping Stations

Prices per cwt. paid at the dealers' country receiving stations or at producers' railway shipping plants are given as follows for September:

New Haven	$4.04	Kans. City	$2.80–3.43
Washington	4.18	Lincoln	2.62
Jacksonville	3.67	New York	3.85
Chicago	3.70	Albany	3.94
Indianapolis	2.33	Cleveland	3.60
Baltimore	3.71	Cincinnati	3.30
Boston	4.09	Pittsburgh	3.50
Detroit	3.70	Philadelphia	3.81

Retail Prices

The following table gives for a few cities the retail prices of milk, cream, and buttermilk for September, 1920:

Cities	Common milk per quart	Special milk per quart	Certified milk per quart	Light cream* per half pint	Buttermilk per quart
	Cents	Cents	Cents	Cents	Cents
Boston	18	21	28	16	
New York	18	21	28	22	12
Philadelphia	15	17	30	18	13
Pittsburgh	16		25	19	
Cleveland	16	20	32	20	15
Chicago	16	22	25	17	12
Minneapolis	14		22	16	15
St. Louis	16	20	25	18	20
Washington	16	18	30	19	17
Jacksonville	25	27			12
New Orleans	19	22	25	18	17
Memphis	19		28	20	
Portland	14		21	15	14
San Francisco	17		25	17	17
Average	17	21	27	18	15

*Cream testing 18—20 per cent butterfat.

HUDSON SUPER SIX

The Exclusive Super-Six Motor Gives This Advantage

From Men Who Do Not Own Hudsons Comes An Interesting Expression on Super-Six Performance

Many men who covet its abilities learned to admire Hudson from the viewpoint of the "man in the other car". Perhaps you, too, have noted the characteristic all Hudsons reveal when fast going without exceeding the speed limits, is a factor.

Alertness and immediate response to the throttle accounts for the way Hudsons take advantage of every driving opportunity. There is no motor labor.

When Driver and Car Act as One

You frequently hear Hudson owners speak of the way their cars answer as though they were a part of their own impulse. Never a sense of the mechanical. All feeling that there is a motor and complicated mechanism is absent.

No wonder Hudson owners are so partial to their cars. And no wonder other motorists are forced to recognize the Hudson quality.

Pride of ownership to many means beauty of line and the qualities that excite admiration while the car is inactive. In those particulars the Super-Six in every type of design meets every wish. But it is pride of performance that excites the greatest praise for Hudson — whether it be in establishing world records for speed, acceleration and mountain climbing, or in the constant uninterrupted and therefore economical operation required in private service.

Yet Hudson's supremacy means no added complications, weight or size. It results from an exclusive Hudson invention, which added 72% to the power of motors of its size, and increased efficiency by 80%.

A Leadership That Has Stood for Five Years

For five years that invention has kept Hudson foremost in performance. And since its discovery and adoption Hudson has always been the largest selling fine car in the world.

The unremitting study, experiment and development of years has made the present Hudson a finer car in many ways than those earlier Super-Sixes. No rival challenges its supremacy by official proof. You will best assure delivery when you want it by speaking for your Hudson promptly.

HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

(4016)

NOTICE THE POINT

IT'S A NEW FEATURE

Found only in The PIERCEASY Bull Ring

No more tearing of the nostrils, because it is now so simple and easy. Just pass the ring thru the nostril, put in one small screw and the work is done quickly, making a clean hole thru the nostril.

CUTS A CLEAN HOLE

Made of a SPECIALLY PREPARED METAL and in SEVERAL SIZES

The Pierceasy Bull Ring is the latest and most durable ring on the market. More simple and efficient than the old style bull ring and many times more practical.

Buy them from your dealer or send $2.00 for No. R. B. 3, which is our large size, postpaid.

Johns-Manville Asbestos Shingle Roof. Owner: M. Miller, Waterloo, Ind.

"The once and for all roofing-Asbestos

Like a corner stone this shingle roof is everlasting rock—Asbestos

THESE Johns-Manville Asbestos Shingles will never rot, curl or split, and years from now will be protecting crops from weather, sun and fire. They will then form even a stouter, tougher roof than the day they were applied because they take on a harder *set* with age.

Farmers, like all other business men, are realizing

that permanent roofings are much cheaper in the long run. All over the country you will see Johns-Manville Asbestos Roofings either in shingle or ready-to-lay form, covering farm buildings—and for one big and important reason—that in the long pull they out-economize any other roof covering—immune to weather and fire because they are strictly *all-mineral*, nothing in them to rot or disintegrate.

You don't have to paint a Johns-Manville Asbestos Roof

Asbestos is a mined mineral, known mostly for its resistance to heat, which of course explains the fire safeness of Johns-Manville Asbestos Roofings—but Asbestos in roofing form has other properties just as remarkable and even more important to the farmer. Atmospheric action, hot sun, wet spells affect it no more than they would a stone in the field.

The proof of this is that you never need to protect it by coating or paint—Asbestos is its own protection. Painting roofs costs money, more in fact than the slight additional first cost of Johns-Manville Asbestos Roofing over inferior grades of so-called "roofing paper."

This book tells very plainly about all types of roofing

It is an unbiased explanation as to what goes into each kind of roofing from the standpoint of a manufacturer who makes all kinds. Sent promptly on request.

Just plain business sense, as your dealer will demonstrate

Your dealer will show you samples of the several forms of Asbestos Roofing. Ask him to show you the blow torch test, and he will explain fully the really remarkable lasting qualities of this material, whether it be shingles or roll roofing.

Johns-Manville Roofings:

Standard and Colorblende Asbestos Shingles, Asbestos Ready Roofing, Corrugated Asbestos Roofing, Built-Up Asbestos Roofing. Johns-Manville Asbestos Roofings are approved by the Underwriters' Laboratories, Inc.

Washington State Fair

G. N. ANGELL, WASHINGTON

MORE than 60,000 people paid admission to the twenty-fourth annual Washington State Fair at Yakima, September 20 to 25, which Secretary Guy. C. Finley, though in office less than a year, made the greatest in the history of the state. The new secretary, whose executive ability was developed in a long term of service with the United States Reclamation service on government service on government projects, is thoroughly convinced of the value of agriculture, and particularly of live stock breeding, to the state, and these industries were given the important place at the fair they deserve. Entertainment was given second place for the first time in years, and although the entertainment features offered pleased the public, it was of the splendid exhibits of cattle, horses, sheep, swine, and poultry that visitors spoke most enthusiastically. Never before has there been such a collection of blooded live stock on the state fair grounds, and the show eclipsed anything that has been seen in the state outside of the Western Royal Stock Show at Spokane.

The attendance was slightly larger than last year, and the fair is now on a paying basis. Dependent heretofore on biennial appropriations from the state legislature, its paid admissions will now take care of current expenses, and the attention of legislators was this year directed to needed permanent improvements to the fair grounds, for which an appropriation of $100,000 will be asked next January. If this money is obtained, a new horse barn, dairy products building and poultry building will be constructed; the grounds enlarged; and the seating capacity of the grandstand, which this season proved entirely too small for the crowds, doubled.

The greatest improvements made this year were in the appearance of the grounds and in arrangements for comfort and convenience of exhibitors and visitors. A new railroad siding and unloading platform for live stock was in use; a new swine pavilion 300 feet long was crowded to capacity; a sanitary dining pavilion catered to thousands; and landscaping gave the grounds a finished appearance they had never had before.

Perhaps the greatest single educational feature, outside of the live stock, was the exhibit of fruit, vegetables, grains, and grasses assembled from widely scattered sections of the state in the county contests. In this eleven counties participated with the active co-operation of the horticultural division of the state department of agriculture, and the state's resources were shown in great variety. Boys' and girls' club contests in ten different branches of club activity attracted 35 district champions, some from each of the five districts into which the state is divided for that purpose. The work of the youngsters in the state contests was of a high order, and their exhibits won recognition even in the regular classes. A high school students' live stock judging contest brought out individuals or teams of three from 11 different high schools, and the score of the winning team from Walla Walla lacked only 143 points of being perfect. Each member of this team showed prize-winning Shorthorns in the regular classes, and several other contestants had animals entered. The participation of club boys and girls in the live stock show was a real feature of the fair, one club product defeating a seasoned exhibitor for first and second place on senior sow pig in the Duroc-Jersey state futurity contest.

All of the live stock barns were filled to overflowing, including the new swine pavilion. No such beef cattle display had ever been seen at Yakima before; the number of horses shown was double that of last year; and the dairy cattle show, while no larger than in some previous years, was of an exceptionally high character, due to the participation of a number of herds with national reputations for both show and production animals.

Four dairy breeds, Holstein, Jersey, Guernsey, and Ayrshire, were shown, totaling 175 head, and for the first time in several years, at least, the number of Jerseys in the barn surpassed that of Holsteins by about 10 head, 67 to 57. The showing of Ayrshires and Guernseys was about the same, 25 head each. Practically all of the animals were in excellent form, a condition which has not always been true at Yakima. The gathering of breeders from all sections of the state furnished the occasion for the informal organization of Holstein enthusiasts into a state association which will be perfected at the Pacific International Live Stock Show at Portland, and for a banquet and annual meeting of the Washington Guernsey Breeders' Association.

Holsteins

Exhibitors: Washington State College, William Bishop, Hollywood Farm, John Hobson, Butchart Bros., F. E. Fairbanks, M. W. Poyner, F. Rosenkranz, Firlock Stock Farm, and Paul Johnson, all of Washington.

Judge: Chesley F. Jenness, Iowa.

Nineteen head from the herd of William Bishop constituted the only full string of black and whites in the show, the Hollywood Farm entries consisting of its herd sire, Judge Segis; a son and a grandson of the famous bull; and 11 of his daughters, none of them yet in milk. Washington State College and Butchart Bros. also showed principally young stuff, hence the aged classes were not particularly well filled and the real competition developed in the younger classes for females. Judge Segis went to the top in the aged bull class and took the championship over the Bishop herd sire of Chimacum Wayne Boone and Lutschke Vale Cornucopia breeding, and over Segis Pontiac Acme, the state college bull. A Hollywood bred son of the champion also defeated three others in the senior yearling class and took the junior championship. He is owned by Firlock Stock Farm. Maldeta Canary Mercedes, an old cow owned by Butchart Brothers, which several years ago was grand champion female at both the Washington and the Oregon state fairs and which won the seven-day butter contest at the same shows the same year, ran second in the aged cow class to Hazelwood Ormsby Posch 2d, a Bishop cow which was first as a calf and junior champion at the National Dairy Show in 1912. Hollywood Farm took most of the prizes, including four firsts, on individual females under three years old, and also on young and calf herds, get of sire and produce of dam. There were six entries in the senior yearling, seven in the junior yearling, nine in the senior calf, and eight in the junior calf classes for females.

The awards in each class were as follows:

Bull 3 years or over—1, Hollywood Farm on Judge Segis; 2, William Bishop on Chimacum

Wayne Lutschke; 3, Washington State College on Segis Pontiac Acme; 4, Paul Johnson on Sir Leda Ormsby. Bull 2 years and under 3—1, Bishop on Riverview Sir Fellenga; 2, Fairbanks on Sir Bessie Rags; 3, Rosenkranz on Ormsby Wanabee Johanna. Senior yearling bull—1, Firlock Stock Farm on Hollywood Veeman Segis; 2, Bishop on Canary Paul Ormsby Posch. Senior bull calf—1, Hobson & Sons on Sir Ormsby Bessie Segis; 2 and 4, Washington State College on Chinook Segis Pontiac David and Chinook Segis Pontiac; 3, Hollywood Farm on Hollywood Illustrites Segis. Junior bull calf—1, Butchart Bros. on Sir Maldeta Bessie Fobes; 2, Bishop on King of Chimacum 2nd.

Cow 4 years and over—1, Bishop on Hazelwood Ormsby Posch 2nd; 2, Butchart Bros. on Maldeta Canary Mercedes; 3, Washington State College on Pietertje Natsey Belle 2nd. Cow 3 years and under 4—1, Bishop on Daisy Perfection De Kol; 2, Washington State College on Chinook Maplecrest Barbara; 3, Poyner on Pearl Tritomia Fobes. Heifer 2 years and under 3—1 and 3, Hollywood Farm on Hollywood Segis Lady Fayne and Hollywood Segis Mercedes De Kol; 2 and 4, Bishop on Chimacum Lutschke Lorena; and Newaukum Palmyra Beauty. Senior yearling heifer—1, Hollywood Farm on Hollywood Segis Phoebe Veeman; 2 and 4, Bishop on Chimacum Lutschke Mercedes May and Chimacum Bracelet's Chloe; 3, Butchart Bros. on Gerben Bracelet's Fobes. Junior yearling heifer—1 and 2, Butchart Bros. on Bessie Jewel Fobes Edna and Bessie Canary Mercedes; 3, Hollywood Farm on Hollywood Hengerveld Segis; 4, Bishop on Chimacum Molly 2nd. Senior heifer calf—1, 2, and 4, Hollywood Farm on Hollywood Lilith Segis 2nd, Hollywood Mercena 2nd and Hollywood Mercedes Veeman; 3, Bishop on Hazelwood Ormsby Posch. Junior heifer calf—1, 2, and 4, Hollywood Farm on Hollywood Lilith Bella 2nd, Hollywood Segis Beryl and Hollywood Segis Fayne Jewel; 3, Bishop on Chimacum Molly 3rd.

Graded Herd—1 and 3, Bishop; 2, Washington State College. Young herd—1, Hollywood; 2 and 4, Bishop; 3, W. S. C. Calf herd—1, Hollywood; 2, W. S. C.; 3, Bishop. Get of sire—1, Hollywood on get of Judge Segis; 2, Butchart on get of Sir Bessie Fobes Tritomia; 3, Bishop on get of Chimacum Wayne Lutschke; 4, W. S. C. on get of Segis Pontiac Acme. Produce of Cow—1, Hollywood on produce of Lady Illustrites Fayne; 2, W. S. C. on produce of Pietertje Natsey Belle; 3 and 4, Bishop on produce of Hazelwood Ormsby Posch and Riverview Bracelet Chloe.

Senior and grand champion bull—Judge Segis. Junior champion bull—Hollywood Veeman Segis—Senior and grand champion female—Hazelwood Ormsby Posch 2nd. Junior champion female—Hollywood Lilith Segis 2nd.

Jerseys

Exhibitors: Washington State College, Waikiki Farm, N. C. Sears, P. Meenderinck, and E. O. Erickson, all of Washington.

Judge: F. H. Scribner, California.

The predominance of Jerseys was perhaps the real feature of the dairy cattle show. Yakima is not a Jersey breeding center, Holsteins and Guernseys being bred there almost exclusively, and heretofore the showing of Jerseys has been comparatively small. The four herds came from as many different sections of the state, and Waikiki farm, which has always had things pretty much its own way at the state fair, found some real competition in the entries of the young breeders. Judge Scribner found the Jersey exhibit much larger than he expected, and said that while the older classes were good, the younger ones were exceptionally so, a condition which spoke well for the work which breeders of Washington are doing. He particularly admired Mr. Erickson's Sultan's Figgis of J. H., the three-year-old grand champion. The older classes were not large, but that for junior heifer calves brought out 11 youngsters, among which Mr. Sears' Diploma's Little Sweetheart was placed first, and was later made junior champion. The Meenderinck entries arrived too late to be judged, having been delayed in shipment from the Victoria, B. C., fair, where they won several prizes.

The awards were as follows:

Bull 3 years or over—1, W. S. C. on Maxwell's Landseer Lad; 2 and 4, Erickson on Sultan's Olga's Boy and Flying Fancy's Sultan; 3, Sears on St. Mawes of Grassmere. Bull 2 years and under 3—1, Waikiki Farm on Mauna Loa of Waikiki. Senior yearling bull—1, 3, and 4, Waikiki Farm on Bonny's Pet of Waikiki, Esther's Pilot of Waikiki and Count's Foxy Owl; 2, W. S. C. on Chinook Golden Gogol. Senior bull calf—1 and 2, W. S. C. on Chinook Landseer Clem and Chinook Landseer Ban; 3, Waikiki Farms on Waikiki's Owlet; 4th, Sears on Champion of Midfields. Junior bull calf—1, Waikiki Farm on Belle's Pilot of Waikiki; 2 and 3, Erickson on Olga's Flower Boy and Raleigh's Fancy Boy.

Cow 4 years or over—1 and 3, Erickson on Raleigh's Beauty of J. H. and Sultan's Star's Fancy; 2, Waikiki Farm on Indiana Lady's Diana; 4, Sears on Miss Zillah's Pansy. Cow 3 years and under 4—1, Erickson on Sultan's Figgis of J. H.; 3, Waikiki Farm on Emeline's Easter Lily. Heifer 2 years and under 3—1 and 3, Waikiki Farm on Owlet's Druscilla and Pilot's Cognette of Waikiki; 2, Erickson on Sultan's Flower Girl; 4, Sears on St. Mawes Goldie of Midfields. Senior yearling heifer—1, Waikiki Farm on Pilot's Duchess of Waikiki; 2 and 3, Sears on St. Mawes Zillah Pansy and Brighter Dawn. Junior yearling heifer—1, Sears on Peggie Anne of Midfields; 2, Waikiki Farm on Pilot's Edena of Waikiki; 3, Erickson on Raleigh's Olga Girl. Senior heifer calf—1 and 2, Erickson on Fancy Star Lassie and Olga's Pet; 3, W. S. C. on Chinook Landseer Alma; 4, Sears on Dawn's Sunshine. Junior heifer calf—1 and 4, Sears on Diploma's Little Sweetheart and Peggie Annabelle; 2 and 3, W. S. C. on Chinook Landseer Clemmie and Chinook Landseer Betsy.

Graded Herd—1, Erickson; 2, Waikiki; 3, Sears. Young Herd—1, Sears; 2, Erickson; 3, Waikiki. Calf Herd—1, W. S. C.; 2, Erickson; 3, Sears; 4, Waikiki. Get of Sire—1 and 4, Erickson on get of Sultan Star and Sultan's Olga Boy; 2, W. S. C. on get of Maxwell's Landseer Lad; 3, Sears on get of St. Mawes of Grasmere. Produce of Cow—1, 2, and 3, Erickson on produce of Raleigh's Sunbeam, Miss Muriel Olga of M. L. P., and Oxford Lad's Flower; 4, Sears on produce of Peggie Anna.

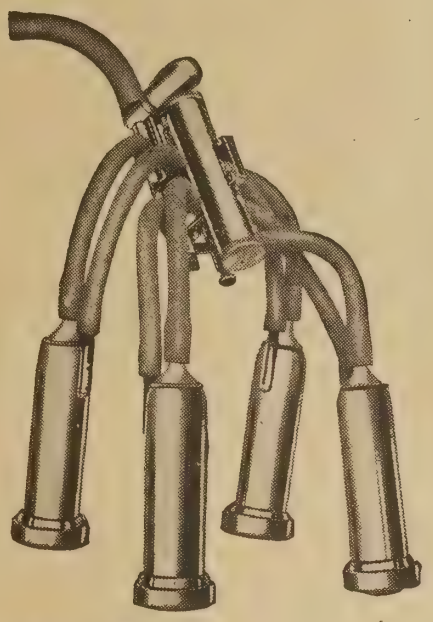
Senior and Grand Champion Bull—Maxwell's Landseer Lad. Junior Champion Bull—Chinook Landseer Clem. Senior and Grand Champion Female—Sultan's Figgis of J. H. Junior Champion Female—Diploma's Little Sweetheart.

Guernseys

Exhibitors: Dr. A. McRae Smith, Vander Griend Brothers, Wallace & Fordyce, and Yakima Valley Guernsey Breeders' Association, Ray N. West, R. T. Peterson, Joseph Rochel, Robert McKendrick, and F. A. Majewski, all of Washington.

Judge: F. H. Scribner.

The progress shown by Guernsey breeders of the state since their organization last winter was well illustrated in this division, for although one of the best herds in the state, that of H. E. Angel was missing, more breeders than ever participated and the quality of the animals shown was excellent. Most of those exhibited by Yakima breeders were dispersed in that section last June after importation of the Canterbury Shaker herd by the local Guernsey Breeders' Association. The effect of this excellent stroke of business was thus felt immediately at the fair. The young bull made first in the yearling class came with this importation from the Harbor Hill Farm, and is now being used by several breeders in the Yakima Guernsey Bull Association. Woodvale Radium, the junior and grand champion, is a wonderful specimen of the breed, and Judge Scribner characterized him as fit to win in any competition. He was sold at the fair grounds to Dr. Smith, whose splendid small herd, with that of Vander Griend Brothers, arrived late from the Victoria, B. C., fair.



The detailed awards follow:

Bull 1 year and under 2—1, R. N. West on Pioneer of Harbor Hill. Senior bull calf—1, McKendrick on Woodvale Radium; 2, Dr. A. McRae Smith on Fircrest King of the the May; 3, Joseph Rochel on Yakima King. Junior bull calf—1, Yakima Valley Guernsey Breeders' Association on Canterbury Adventurer; 2, Wallace & Fordyce on unnamed.

Cow 4 years or over—1, Vander Griend Bros. on Imp. Satinette of Edgemoor; 2 and 4,

(Continued on page 552)

National MILKER

The National Milker Pulsator just above the branch connection gives distinct, positive action.

See our exhibit in Space 85, Section B, at the National Dairy Show, Chicago, October 7th to 16th.

This Pulsator Marks a New Era

YOU have heard your neighbors say: "I never saw anything like the National Milker Pulsator." What do they mean? They mean that of all the wonderful features of this milker, the National Pulsator is the most surprising. It is placed just above the branch connection, giving distinct, positive action and enabling the National to milk cleaner and faster than any other milker on the market. It makes it possible for the National to milk alternately and still use only one tube between the pail and branch connection.

It makes possible automatic squeeze and suction adjustment from moment to moment according to the exact milk flow of the cow.

It means that you can milk stripping cows with better results than with any other milker.

It means that you can change from a single to a double unit more easily than any other milker.

It means new simplicity greater economy, higher efficiency—in fact a new era in milking machines!

Will You Investigate?

A new standard has come in milking machines. You can no longer judge the machine for your farm by what you have known of other milkers. You must investigate the National before you can know what to expect of your milking machine.

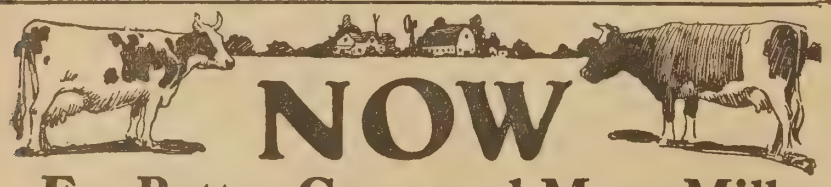
Wonderful as it is, the National Pulsator is only one of many features of this milker. At every point the National Milker has new improvements—new simplicity.

Find out about the National Milker. You owe it to yourself to investigate. Write us a letter.

National Milker Company

639 Washington Ave. So. **Minneapolis, Minnesota**

Do you know that $70 worth of good Buffalo Gorn Gluten Feed mixture, well fed with good roughage, can produce, at current prices, $245 to $280 worth of milk?



WITH milk bringing around $3.50 a hundred pounds, and more than that in many sections, and the price of BUFFALO CORN GLUTEN FEED lower, present and prospective dairy profits are better than they ever have been.

The feeding of high-protein, highly digestible, milk-producing BUFFALO CORN GLUTEN FEED *liberally* to good cows assures you of the largest and most economical milk production—*the widest possible margin of profit* over cost of grain feed.

FEED UP! *FEED BUFFALO CORN GLUTEN FEED*

Your dealer should have BUFFALO CORN GLUTEN FEED for you. If he does not, write us, saying who and where he is. We will be glad to send you sample and literature.

Corn Products Refining Co.
New York Chicago

NOW

For Better Cows and More Milk

To put your cows into the barn in best condition and assure the biggest milk flows throughout the winter feed them International Special Dairy Feed *NOW*—and from now *on*. International Special Dairy Feed keeps cows in best condition and makes them give more milk throughout the milking period. The cost of this feed is more than covered by your profits from more milk. Better herd condition means extra profit. These are facts to which thousands of dairymen testify.

FEED

International Special Dairy Feed

This feed is guaranteed to produce more milk than any other feed of similar analysis. A million dollar corporation backs this guarantee with their capital and reputation.

International executives and salesmen are experienced practical feeders. There is no guesswork about any International Feed. When one man can take 40 grade cows and get an average of 6000 lbs. of milk per cow from them in a year, as did one International Special feeder, *you can do it.*

Order your trial ton today from your dealer or from us—and put it to the test.

Uncle Sam's Hired Men Who Serve You

Charles F. Marvin, Weather Man, a Scientist and Inventor —That's Why He's Right 90 Per Cent of the Time

JOHN ANSON FORD

This is the sixth of a series of articles this publication is running, in co-operation with the U. S. Department of Agriculture, to acquaint our readers with the type of men who are making possible the wonderful service the Department is rendering and stands ready to render our readers, that those not now availing themselves of these services may do so.—EDITORS.

CHARLES F. Marvin, Chief of the Weather Bureau, was "discovered" by a famous Arctic explorer—not while the latter was in the Northland, to be sure, but in Washington, D. C. The story goes back to the '80's, not long after young Marvin had passed a Civil Service examination and secured an appointment as "junior professor"—an odd title designating a position in the Signal Corps, which in those days carried on weather forecasting and related work known to science as meteorology. It was the famous discoverer of new land north of Greenland, Major General A. W. Greeley, who discerned, while head of the Signal Corps after his return from the North, that Marvin possessed exceptional ability in mechanical engineering. He foresaw the great service which the young man might render to his country in the weather forecasting organization, and opened the door of opportunity for him.

"I told you so," the venerable general says in effect, when folks talk about the record Marvin has made in the 30 odd years he has been working for the government. "I am proud to take a good deal of credit for having started him on a path which has led to wonderful achievements."

If it seems a far cry from mechanical engineering to weather forecasting, let the reader remember that 85 to 90 per cent of the day-to-day forecasts of the Weather Bureau are accurate and that this remarkable record has been possible because of the increasing skill of the forecasters, supplemented by one of the most extraordinary collections of scientific apparatus and instruments to be found anywhere in the world. Among the inventors of these meteorological instruments Mr. Marvin stands first.

Had Mr. Marvin spent his life in private employment and made as many fundamental inventions for some chosen industry as he has while in government service, he would have been rewarded many times over what Uncle Sam has paid him. When he became chief of the Weather Bureau in 1913, after 29 years of service in subordinate positions, his salary was placed at $5,000. There it has remained, regardless of the H. C. of L. and his invaluable contributions to a government service which annually saves the farmers, through its timely warnings, hundreds of thousands of dollars loss in live stock and crops; a service which also acts as the trusted lookout for numberless shippers on land and water, warning them of approaching storm, cold, or heat; a service performing a score of other important tasks touching the nation's daily life. One of the most remarkable facts about the Weather Bureau is that in recent years not a single great storm has occurred in this country which has not been adequately heralded by the government's forecasters.

Mr. Marvin's contributions to his chosen science have received gratifying recognition in the scientific world. When the office of chief of Weather Bureau became vacant in 1913, President Wilson asked the National Academy of Sciences to submit a list of men it would recommend for appointment. Mr. Marvin's name was one of four submitted. His appointment as chief came as a well merited reward.

Everybody has heard of box kites, but few know that an improved type of box kite which will go up a mile or

CHARLES F. MARVIN

more was devised by Marvin and built to carry what is called a kite meteorograph which also is a Marvin invenvention. This little instrument weighing about 1½ lbs. records the atmospheric pressure, temperature, the humidity, and the velocity of the wind. Large numbers of these kite meteorographs are in use by the Weather Bureau. Incidentally, the reeling apparatus by which each kite's 40,000 or 50,000 feet of steel wire is wound up automatically, is also Marvin's invention.

Ever hear of Marvin's pyrheliometer? It's a mighty important instrument for measuring one of the forces fundamental to all life—the amount of heat received from the sun on which plant and animal processes depend. Another of his achievements is a particularly efficient seismograph which records earthquake shocks, and is so sensitive that it will respond to heavy disturbances taking place in any part of the earth.

Of prime importance in studying soil moisture, etc., is knowledge of the rate at which evaporation takes place on the surface of bodies of water. One of the instruments used in this work is also the product of his brain. Still another Marvin invention is a barograph of exceptional precision, which makes a continuous record of atmospheric pressures so that one can tell at a glance how much the barometer has risen and fallen during a given period. No weather forecasting can be done without knowledge of changes in barometric pressures.

A study of the clouds, their character and movements, is another important phase of the work at the Weather Bureau. To carry it on better, Mr. Marvin devised a nephoscope by which an observer views clouded conditions of the sky, and by means of scales and sighting arrangements,

determines the motion of clouds and their apparent velocity.

Of all the varied services under Marvin's supervision, first in importance is the work of the Forecasting Division, which receives and charts twice daily telegraphic reports of prevailing weather conditions, and issues statements of impending weather changes. In the case of severe disturbances, warnings are issued along the lakes and sea coasts. The frost and cold wave warnings are invaluable to many interests, including the trucker and fruit grower, especially in the spring when tender vegetation needs protection.

The aim of the Weather Bureau, as guided in its enlarging program by Mr. Marvin, has been to serve wherever its facilities and a special need made service practicable. The variety of special uses of the storm warnings illustrate another phase of the practical value of the forecasters' service. In advance of a predicted storm, rice planters flood their crops to prevent the straw from being broken by the winds. Agents of marine insurance companies stop insuring cargoes after a storm has been predicted. Fishermen take steps to protect their boats and nets. Lumbermen make their standing booms secure and regulate their log towing. At lake ports vessels load hurriedly if they can get off two to five hours in advance of off-shore winds. If snow is expected shippers must start 17 to 18 hours in advance.

Not only on the farms and on the water is the service of the Weather Bureau invaluable, but cities also are constantly dependent upon it. With notice of an approaching cold wave greenhouses are closed and their boilers fired. Preparations are made at once by heating and lighting plants in all cities, whether gas, electric, steam, or hot water. Fire plugs, exposed mains, and general plumbing are protected. Large stockyards drain their machines. Gasoline engines are drained. Work in concrete is stopped. Street railway companies arrange for more heat in their cars. Natural gas companies turn a larger amount of gas into their lines to provide for increased consumption. Dredging of sand and gravel ceases, and iron ore in piles for shipment is placed in the holds of vessels to prevent the wet masses from freezing.

The Division of Agricultural Meteorology, another branch of the bureau, supervises the work of about 400 special observers maintained in connection with the corn, wheat, cotton, sugar, rice, tobacco, fruit, and other industries. It has charge of the distribution of the special warnings issued for the benefit of certain crops and publishes data showing weather conditions throughout the country and the effect of these conditions on certain important crops.

When a new industry is proposed for a certain section of the country or the introduction of a plant new to a region is contemplated, a history of the climate of that region is most important. Information of this character regarding every section of the country is compiled by the Climatological Division of the bureau. It has supervision of about 4,200 co-operators and about 42 special stations. From these are collected records of daily observations of temperature, rainfall, etc., forming the basis of a climate history of the utmost importance to agricultural and industrial development.

The bureau maintains throughout the United States, in the West Indies, Alaska, and Hawaii about 200 meteorological stations employing from 1 to 15 persons especially trained in gathering data on which the forecasters, located at five points in the United States, base their daily predictions which combined cover the entire country. Mr. Marvin, while not specializing in forecasting himself, feels that these men at the observation stations and the forecasters deserve a larger measure of credit than is popularly accorded them.

"The public does not always realize the tremendous responsibility resting on these men," said Mr. Marvin in discussing weather forecasting. "It's no 'fair weather' job that they have. Eternal vigilance is their motto. Who can measure the responsibility that is theirs when a great storm sweeps across the country? Did you ever stop to think what would happen to ships, trains, live stock, unsheltered stores of goods, and a thousand other interests, if the Weather Bureau was not on the job when one of those West Indian hurricanes comes roaring up out of the Carribean? I know of no other man whose task equals the forecaster's at such a time. He must be in touch every two hours with all our stations down in the southwestern section of the United States and points beyond our coast. At the earliest possible moment he must warn the section of the Gulf Coast which he believes will be struck by the monster of destruction. It may be Pensacola; it may be Galveston; or it may be in between. He must decide, and send forth the warnings. I take off my hat to these men, and if I can devise an instrument or a piece of apparatus that will make their task easier, by giving them more complete and accurate data, I am proud to make such a contribution as part of my service to this great national servant, the Weather Bureau."

And this is only one bureau of the seventeen that goes to make up the United States Department of Agriculture, all working together, each using information furnished by the others in planning and suggesting better methods in agriculture for the direct benefit of the farmers and also for the benefit of every other citizen of the United States.

The Fall Help You Need

CORN harvesting is a tough Fall job which the tank-type Cletrac handles easily. Compact and low-set, it gives you a short, straight hitch on your corn binder that eliminates side draft.

This tractor does twice the work horses can do and more quickly, too; keeps going up grades or on bad level stretches at uniform cutting speed—faster if the crop is light, slower in a heavier stand.

The easily-operated Cletrac turns short, cuts clean to the corners and swings quickly back to the row. Its broad, sure-gripping, metal tracks keep it from digging in or slipping on soft or sticky ground—there is no power-loss.

The Cletrac follows through in shredding, shelling and grinding as well as other Fall belt jobs. Lines up quickly and easily—won't creep out of line.

Talk it over with the Cletrac dealer near you or write today for the interesting booklet, "Selecting Your Tractor."

The Cleveland Tractor Co.

Iowa Swine Feeders' Day

Would you like to know how to produce pork at the least feed cost and with less labor? This will be dwelt upon at the Iowa Experiment Station, November 11, 1920.

Everyone will have an opportunity to see experiment pigs fed in some 57 different ways, practical and impractical, demonstrating different methods of converting feeds into pork.

These pigs are all live pigs and they tell a live, clear, and authorized story. They illustrate different methods in actual practice which in actual life is the real actual test.

We are feeding some score and a half lots of different commercial feeds this year and the commercial feed manufacturers will be here along with everyone else to see the results of the test.

Iowa Swine Feeders' Day has always been well attended. Our Cattle Feeders' Day has been a well attended event. This year the Swine Feeders' Day, held on Armistice Day, will be a day filled brimful of profitable activities.

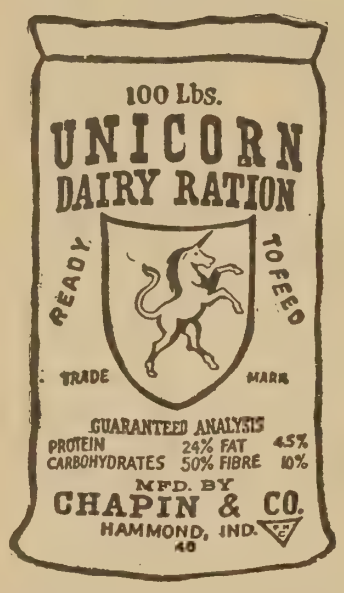
Mixed feeds, corn substitutes, alfalfa, bluegrass, sudan grass, different tankages, corn oil cake meal, type test, and lots of other things will be covered. We are going to release a lot of good, practical stuff.

Come and be with us and see the pigs for yourself. See how they have done on the different methods of feeding.—Iowa College of Agriculture.

There's Nothing So Dark as the Inside of a Cow *Unless*—

it's the inside of a bag of feed.

Look at feeds—they all appear alike and you can't tell anything about them.



Analyses and names don't deliver the goods.

The only proof of a cow or a feed is in the milk pail.

Unicorn has been proved by scores of Testing Association winners to be the greatest milk and largest profit producer.

If it is profits you want, then feed Unicorn.

Forget the price and look at the profits.

Porter County, Indiana, Cow Testing Association reports Morgan Brothers led all herds for August, 1920. Their 19 cows averaged 40.3 lbs. fat and are fed Unicorn Dairy Ration the year round.

Is Shortage of Farm Labor Serious

HOARD'S DAIRYMAN:—I have read Hoard's Dairyman for a number of years, and you may be sure that I appreciate its high quality as an agricultural and dairy magazine. I know that its policy has always been one of progressiveness, and a desire to stimulate the dairyman to make the most possible out of his business, and to keep him informed as to the latest developments in the dairy industry. I also appreciate the fact that you have not indulged to any considerable extent in "calamity howling", and in this I believe you have pursued a wise policy because the farmer, as a rule, I believe, is prone to do this too much, and no doubt this is the reason why you have refrained from admitting what sometimes appears to us to be a serious problem.

However, I believe we should look these problems that confront us square in the face and admit their seriousness when they are really a menacing problem. I refer particularly to the labor proposition. I note that in a number of your recent issues on your editorial page, you make mention of the labor situation as not being at all serious. In fact, you make the statement that the complaints along this line are largely imaginary. In your issue of July 6th, you have a large headline over one of your editorials, as follows: "South Oversupplied with Farm Labor." The article then goes on to say, "Much has been said by the agricultural press regarding the shortage of farm labor. We do not look upon our present farm labor situation as being at all serious, although we appreciate that perhaps we may have a shortage of certain kinds of foodstuffs."

Our farm, consisting of about 3,500 acres, is located in Southern Illinois, which might be termed the gateway of the South. We operate one of the largest dairies in the Mississippi Valley, milking as many as 300 cows a day, with a dairy herd that numbers more than 500 head. We produce certified milk for the St. Louis market, and in addition we run a pure-bred breeding establishment in connection with our certified milk business. We operate a hog farm on which we handle about 3,000 hogs per year, all of which are bred by us. We carry more than 100 head of mules, and we cultivate about 2,000 acres of our farm. I give you this short description showing that we are in the farming business on a large scale, and should be in a position to know what the farm labor situation is in our particular section.

You can readily appreciate the fact, when I say that our proposition requires a large amount of labor, and I might say that we try to provide our labor with very attractive conditions. All of our equipment is thoroughly modern in every respect, with labor saving devices wherever it is possible to install them, so as to make the work for the men as pleasant as possible. We run our plant on a nine-hour day, and men working in the dairy do not have to go out and work upon the farm. We pay our men good wages, in fact more than our business really justifies, and when I say good wages, I mean from $75 to $150 per month. But even with these conditions, we have not been aware of the fact that the South has been oversupplied with labor, at least during the past two or three years. In fact, the labor situation with us is the most critical now that we have ever known it to be. Of course we are in a coal mining field, and it is hard for the farmer to compete with the wages paid by the coal mines. When it is possible for a man with his helper, who in many cases is only a sixteen- to eighteen-year-old boy, to go down in the mines and earn $8 to $10 a day each, we cannot reasonably expect them to work on a farm for $100 a month and work one hour longer each day and seven days a week. However, as a matter of fact, the man working on the farm every day the year round, will in all probability have as much money at the end of the year as the coal miner, but the laboring man does not appreciate this fact.

Our conditions here may be somewhat different than conditions in other communities, due to our location, but I have been in touch with a great many farmers all over our state and neighboring states who view the situation in the same light as I do. The conditions seem to be pretty general, that the farmers cannot get sufficient labor, and what they are able to get is very inefficient. The laboring class of people is moving away from the farms to the cities and industrial centers, and getting jobs that pay big wages. It is not necessary for me to review some of the industries and the wages being paid by them, because it has become well known that a man who is able bodied and of ordinary intelligence can get a job in the cities at a wage that is absolutely impossible for the farmer to compete with. As a result, what is there left in the way of labor, that the farmer can hire? It is a very low and irresponsible class that is not worth any wage you might pay them however small. They will not take care of our property, they will not take an interest in their work, and all they seem to care for is pay day and quitting time. I remember a few years back, when there was a lot of talk about the shortage of labor on farms, the agricultural press began to discuss the proposition, and they seemed to reach the general conclusion that the trouble was largely with the farmer, in that he did not provide suitable quarters for his men or pay a decent wage for an honest day's work. Perhaps that was largely true, but even then I think the situation was somewhat overdrawn by the agricultural press. But, be that as it may, the situation of today is the one in which we are interested, and the conditions existing in my particular locality are serious; they are not imaginary, and they are the cause of a great deal of concern.

A proof that these conditions are serious is, that in the Randolph Coun-

ty paper, published at Chester, Illinois, there were in one issue advertised 37 farm sales. The sales advertised in this particular issue were in a strictly agricultural section, little influenced by the mines. In Perry and Jackson Counties, there have been more than 50 farm sales with better than 50% of the men leaving the farms entirely. This would seem that something must be wrong, and I have talked to a number of these men personally, and the large majority of them give as the reason, that they cannot get help.

In your issue of August 6th, in your editorial headed, "Now and Then" you published a few statements taken from an issue of Hoard's Dairyman, published 30 years ago. In one of these you make mention of the fact that in 1842 a man lived in Eastern Iowa, who hauled shelled corn 28 miles and sold it for 6¾ cents per bushel, his corn being shelled in a wash tub; that he also dressed his own pork and hauled it to the same town for 1½ cents per pound, made his own clothing, lived on pork, corn bread, and rye coffee, went without shoes, and was very happy. That was 80 years ago but I cannot see that there is any consolation in that fact. Of course now we get many times over the price received for corn and pork 80 years ago, but the cost of production has also increased many times over. It isn't what a product sells for that denotes whether or not the producer is making money, it is the cost of production. If the cost of production is more than the selling price, it is then time for the producer to look into his system of management or to have a kick coming on the selling price. But we are getting off the subject slightly, as I started out to discuss the labor conditions in our locality.

I would be glad to see a general discussion of the labor situation carried on in your columns and while the conditions in our locality may not be fairly indicative of the general conditions existing over the entire country, still they are serious from our standpoint.

Illinois. W. R. Hale.

[Comment upon this communication will be found on the editorial page.—Ed.]

The Farm of the Future

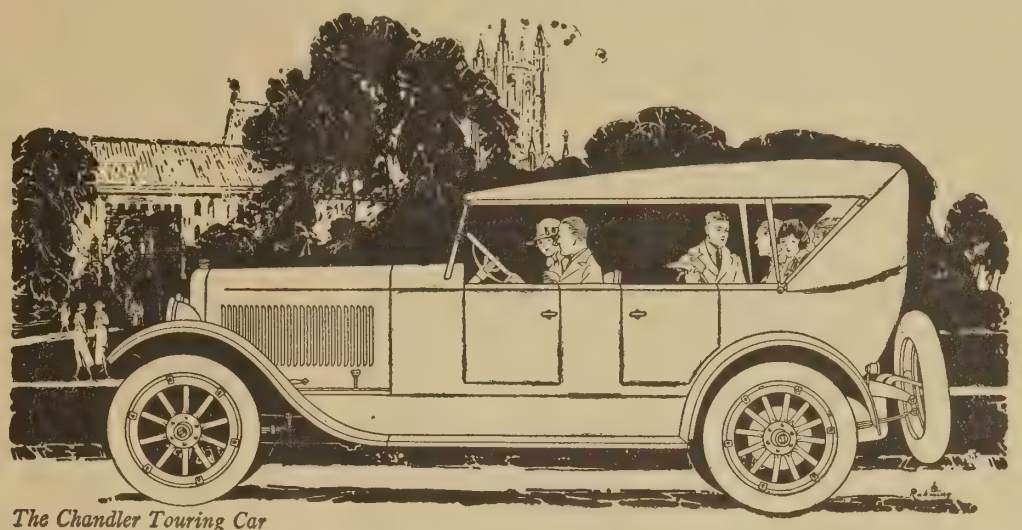
HOARD'S DAIRYMAN:—Cost of production is troubling the farmer the world over and many and various are the remedies proposed to help the farmer. We all know what the trouble is but we have got to find the real cause before we can apply the proper remedy.

I believe the main trouble is due to the fact that while we have invested in tractors, milking machines, and other labor saving machinery we have not adjusted our methods of farming to meet the altered conditions. For instance, the average small farmer still dodges about 14 to 16 hours per day and he thinks you are a fit subject for a lunatic asylum if you say that a dairy farm could be run on an eight- or ten-hour system but I have seen it proved over and over again that a man working eight or ten hours per day will do far more work in twelve months than the man who tries to work 16 hours per day. I believe that the small farmer's days are numbered and only the big farmer will survive under modern conditions

I have worked on large farms and small farms and although the big farmer paid much better wages and only worked about half the hours still he made much more profit. For one thing every man had his own job and he got right into it from eight in the morning until five at night, keeping right on with the one job until it was finished instead of starting a dozen jobs a day and never finishing one of them like many small farmers do.

The big man installs all sorts of labor saving machinery so that each man does several times the amount of work that he would do with inferior tools. He can also finance his business far better as he usually keeps proper books. Being able to buy on the low market and sell on the high, he makes a big profit on this alone. He is also able to attract a much higher class of labor and does not have to send to town for high priced experts every time something goes wrong with his machinery. Then, again, the big farmer does not take his coat off but attends to the buying and selling and keeps his eyes on every department and thus saves many a leak.

I believe that the farm of the future will consist of thousands of acres employing hundreds or perhaps thousands of men, not only farm hands but carpenters, painters, engineers, and all manner of tradesmen. They will be housed in model villages with all modern conveniences and social advantages. Mixed farming will be practiced and the farm will produce most of their own requirements and in food, clothing, etc. They will build and repair their own houses and buildings and repair their own machinery.



I think it is clearly understood nowadays that the city worker is really working for the farmer—shoeing his horses, making and repairing his machinery, making his clothes, etc. What is not so clearly understood is the fact that money is only a token and what we really pay the city worker is food, clothing, and shelter; not only that but half of it goes in wages to someone else for their time and trouble in distributing it. It costs several times as much to house our laborers in the city where lands cost more per foot than it does per acre in the country.

The most pressing thing to decide is whether these large farms are to be owned by trusts or whether the present farmers will amalgamate and run them on the co-operative system.

New Zealand. F. W. MARCHANT.

CHANDLER SIX

Famous For Its Marvelous Motor

The Chandler Touring Car

Right Car at Right Price; Chandler Is First Choice

The Chandler Company has devoted itself for seven years to the determined policy of producing, and continuing to produce, the best Six at the fairest price. And it has succeeded with distinction in this devotion.

Featured by its exclusive Chandler motor, constantly developed and refined but never radically changed, and by its sturdy chassis construction throughout, the Chandler has steadfastly held its place among fine cars and gone forward into a position of unquestioned leadership among Sixes.

Satisfactory service, under any and all conditions, in the hands of its more than eighty thousand owners, is the best proof of Chandler worthiness.

There is a Chandler dealer near you. See him or write us for catalog.

CLEVELAND, OHIO

New-Idea Frameless Feed Door

The exclusive frameless feed door construction puts the New-Idea in a class by itself; on no other furnace will you find this wonderful improvement. It absolutely prevents any dust or gas escaping into the cellar. The frame of the door is cast in one piece; there are no bolts, screws or cement to loosen as in other heaters.

This is only one of the many superior features that make the New-Idea the furnace you will select when you know all about it and make comparisons.

A Few New-Idea Features

Our catalog tells all about the cup-joined construction that prevents leaks; the hot-blast feed door; the gas and dust-tight register that assures clean heat; the patented non-clinker grate that burns any fuel; and all the other New-Idea advantages.

A binding written guarantee insures absolute satisfaction. Your money back if the New-Idea does not do what we claim.

Send for catalog and name of dealer in your neighborhood. Expert advice on your heating problems, free.

The Future of Your Boy on the Farm

(Continued from page 529)

sity to the farm, as I have, feels so forcibly the scantiness of the get-together spirit in many places, the barrenness of one's social life, and the meagreness of so much that the soul craves. Contrasts and change are what make routine bearable, in fact, under the properly balanced kind of work-and-play life, drudgery and routine cease to exist. Spirit means so much in the work of anyone. Who had not rather do a hard piece of work, if they are in good spirits, than do some comparatively easy thing when they are feeling depressed? If your boy can be shown that, no matter how badly things go on the farm with his own boyish affairs, aspirations, and possessions, there is always some way out, some means of rising above the obstacle, he will develop the unconquerable spirit which is so necessary to tide over periods of poor crops, disease in stock, and partial failure of other things that come to all of us.

He needs for you to give him a clear vision of our new and greater agriculture. You should be the first one to teach him that upon the intelligent handling of our soil depends the life and well-being of all future generations. Beyond the daily grind of chores and field work, show him the pure-bred stock and well selected seed grains, the clean fields and well kept fences, and the neat, roomy buildings of a progressive farmer. Impress it upon him that all these can be his if he will stay on the farm after getting a good education, apply what he has learned, and use, through it all, good common sense.

To do all of this you will spend money, yes, a great deal of it, and valuable time, but what are a few more years of preparation if they double and treble your boy's earning power and his capacity for enjoyment throughout the rest of his life? The golden time to acquire knowledge rapidly is in youth. How many of us but what realize that, now that we have passed the age? Your boy must be loaned for a time to city life and university surroundings if he is to have his happiest future on the farm. Many things may turn him aside there, but if he really loves the farm and the soil when he goes there, and takes up an agricultural course, he will be back as soon as he can get his well-won diploma, and not feel that he is lowering himself when he substitutes work clothes for cap and gown. Too many of our university graduates, I fear, plan only for some managing job where they can tell someone else what to do, and have no hard or dirty work to do in person. The best farming, as a class, will always be done by the farmer who lives on his own farm and works it with the help of his own boys, and what outside help he has to have. The immense farms with a man or two for every job seldom pay, in proportion to the capital invested, like the privately owned and operated farms. And do not be impatient with your boy for receiving instruction in many subjects that you were taught little or nothing of. Our age is becoming more and more one of machinery, and he needs additional training along mechanical lines. Then, too, several subjects, such as bacteriology, are of great value now in his higher education, which were unknown in your time. You will have to bear in mind that he needs such things, although you did not have them and "got along very well without them".

And what kind of man is all this to make of your boy? Is he to be a selfish, domineering, aristocratic, too-good-to-be-touched sort of person? Heaven forbid! You want to see him as one of the people around him, better educated, let us hope, but one of them in sympathy and purpose, a good mixer and neighbor, a leader among them for the advancement of a better agriculture. He should have the best of health, for his training has shown him how to take care of it; the best of spirits (for is not his the most glorious heritage?); and the best morals and religious life.

All the deep and grand things that one learns from close communion with Nature are to be his, the thousand and one things in his every-day life that we become so accustomed to that we hardly heed them will take on a new and more sacred meaning after he has studied the sciences and cultural subjects of a higher education. He can truly have life, and have it more abundantly, and his farm can be as sacred to him as his Bible, for do they not both teach the will of God? And if some other farmer has raised up a daughter in the way that you have your son, and they take a liking to each other—why—there is nothing on earth too good for them, and you may rest assured that their future, as well as your own, will be a happy one.

Cows That Made Denmark Famous

(Continued from page 528)

the butter exports showed a 65% deficit.

The best basis of judgment with regard to the milking powers of the Red Danish dairy cattle is to be found in the records of the cow testing associations on the island of Funen. In the course of the twelve months, October 1, 1914, to September 30, 1915, 38,528 regularly tested cows had an average milk yield of 7,682.4 lbs. containing an average fat percentage of 3.57%.

The foregoing records would be incomplete without those of the first-class herds of Red Danish cattle on the Island of Funen. In the course of the last twenty-five years the agricultural societies on the island have carried out a series of seven dairy cattle competitions, each covering a period of two years. During this period the milk of the competing herds was regularly tested and the competing animals periodically inspected by competent judges of dairy cattle. The following table shows the main results of the competition in question:

No. of competition	Years	No. of herds competing	No. of cows	Ave. for all the competing cows Milk Lbs.	Butter Lbs.
1st	1894—96	7	529.6	6976.2	266.2
2nd	1896—98	9	661.6	7275.5	275.0
3rd	1899—01	8	359.5	8657.0	327.8
4th	1903—05	18	776.6	8527.2	334.4
5th	1906—08	12	525.1	8569.0	347.6
6th	1909—11	11	384.1	9046.4	367.4
7th	1913—15	10	303.8	9341.2	398.2

In the course of the seven competitions covering a period of 21 years the indicated average increase in the milk yield was 2,365 lbs. or nearly 34%; the average increase in the butter yield 132 lbs. or nearly 50%.

One of the ten herds that took part in the seventh competition had an average annual yield of 10,551.2 lbs. of milk and an annual average butter yield of 488.4 lbs. Another herd had an annual average milk yield of 9,182.8 lbs. and an average of 409.2 lbs. of butter. These two herds obtained the highest awards all round. If we consider the individual units of the herds it will be found as a matter of course that the annual milk yield

will be larger. It is not at all unusual for an adult cow to give 11,000 lbs. of milk. Indeed, there are examples of an annual yield of 16,500 lbs. of milk. The average fat percentage for the entire Red Danish breed ranges between 3.5% and 3.65%. The fat percentage of the breed is increasing. There are numerous examples of good milkers of the Red Danish breed having a 4% fat percentage and more. Such cows are usually selected as dams for future sires, especially when they possess the symmetry of the dairy form and belong to a good strain. The number of herd books for Red Danish bulls amounts already to 20 volumes; the first of these appeared in 1896. The Red Danish cows have their own herd books; there are many herd books containing detailed records of cows of this breed. All these books contain valuable data furnished by the cow testing associations.

In 1919 there were about 700 cow testing associations in Denmark, which included 16,000 herds and more than 200,000 cows.

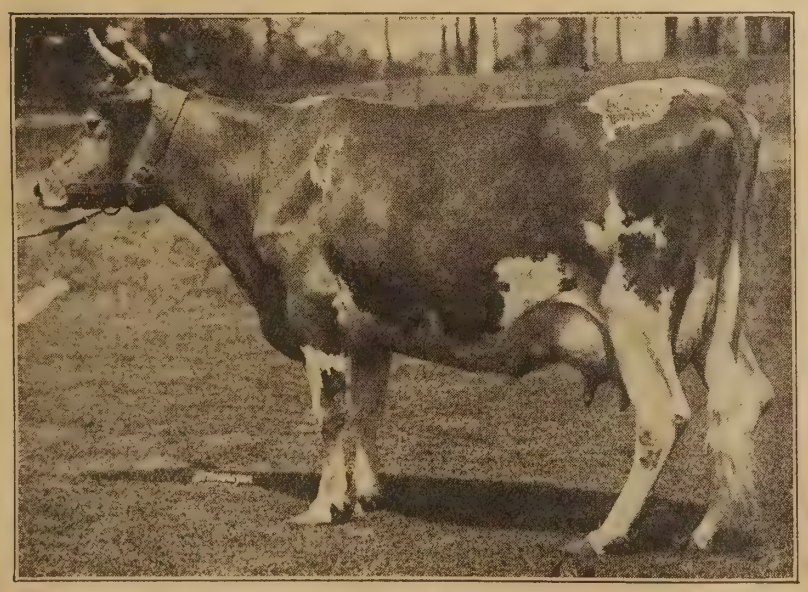
In 1915—16 no fewer than 3,277 herds of Red Danish cattle were subjected to regular testing on the island of Funen alone. The total number of cows tested was 40,116 or 32.5% of the total number (123,278) of dairy cows on the island; the average milk yield per head for the 40,116 cows was 7,938 lbs. and the average butter yield 323.4 lbs.

In July, 1920, the value of the American dollar in Denmark was six Danish crowns. This would enable an American farmer to buy a first-class, select, pure-bred, Red Danish yearling bull calf for about $1,000 or six thousand Danish crowns. First class pure-bred heifers from one to two years old could be bought for about $250 to $300 per head. Second and third quality pure-bred heifers for about $180 to $200 per head.

Sophie 19th of Hood Farm Completes Ninth Record

Sophie 19th of Hood Farm has further strengthened her claim to the title of champion long-distance producer by completing her ninth official year's record with a production of 10,360.9 pounds milk, 566.5 pounds fat. In the nine years she has been tested Sophie 19th has produced 110,938 pounds milk, 6,354.6 pounds fat, which gives her a clear lead of 693 pounds fat over her nearest competitor, Tilly Alcartra, for long-distance production honors. Sophie's nine records are:

Lbs. milk	Lbs. fat	Age Yrs.	Age Mos.
7,050.2	395.9	2	2
9,924.8	570.8	3	8
14,373.2	854.9	4	11
15,099.4	931.9	6	7
17,577.8	999.1	7	11
11,915.4	680.5	9	7
15,948.2	847.8	11	9
8,688.2	507.2	13	0
10,360.9	566.5	14	6



The average yearly production of all her records is 12,326 pounds milk, 706 pounds fat. Although Sophie completed her latest record after passing her fifteenth birthday she is in fine condition, ready to start on her tenth record as soon as she freshens.

At the time she made her fifth record, 999 pounds fat in one year, it was the highest ever made by a Jersey, and it remained so for several years, until her granddaughter, Sophie's Agnes, passed it with a record of 1,000 pounds fat.

Sophie 19th was bred, owned, and tested by Hood Farm, Massachusetts. —AMERICAN JERSEY CATTLE CLUB.

Go on and make errors and fail and get up again. Only go on.—ANNA C. BRACKETT.

New Jersey Guernsey Makes 800 Lbs. Fat

IMP. QUEEN ROSE OF PINE GROVE

IMP. QUEEN Rose of Pine Grove, an eight-year-old Guernsey owned by Paul Moore, New Jersey, has recently completed a record of 15,688.6 pounds milk, 803.01 pounds fat. This production exceeds her requirements for the Advanced Register by 123 per cent. She has a previous record of 12,160.7 pounds of milk, 635.45 pounds of butterfat completed in Class C.

Imp. Queen Rose of Pine Grove was bred on the Island of Guernsey, and was dropped on April 2, 1912. She was sired by Imp. Raymond's Pearl King, an Advanced Register sire, and is out of Rose of Sunnyside. Frank E. Oliver, Mr. Moore's herdsman, reports that he was disappointed with her production because he feels that she is capable of making a very much larger record. He intends to start her on retest in July, 1921. Imp. Queen Rose of Pine Grove is a large cow of extreme dairy capacity and outstanding type. She is quiet, gentle, a good feeder, and takes well to all kinds of feed. All her calves have been vigorous and her last one, a bull, took the blue ribbon at the Morris County and Far Hills fairs.—AMERICAN GUERNSEY CATTLE CLUB.

Confidence in "HANES" can never be misplaced!

HANES
ELASTIC KNIT
UNDERWEAR

"HANES" underwear for men has been standard for years! Beyond any question it is the best value in actual quality, comfort and service ever sold at the price! The "Hanes" guarantee is your assurance of absolute satisfaction. Read it!

Examine "Hanes" critically. You never saw—or bought—such real and true underwear service.

"Hanes" is made in heavy and medium weight Union Suits and heavy weight Shirts and Drawers.

This year we present the new yellow label medium weight, silk trimmed Union Suit, made of full combed yarn particularly for men who prefer a medium weight union suit.

Hanes Union Suits for boys

They duplicate the men's Union Suits in all important features—with added cosy fleeciness. Made in sizes 20 to 34, covering ages from 2 to 16 years. Two to four year old sizes have drop seat. Four desirable colors.

Inspect "Hanes" underwear at your dealer's. If he cannot supply you, write us immediately.

Association Notes

St. Louis County, Missouri—The average production for pure-breds during July was 801 lbs. milk containing 27.3 lbs. butterfat. For grades and scrubs it was 372 lbs. milk and 13.6 lbs. butterfat. Feed prices were: Bran, $52 per ton; cottonseed meal, $60; alfalfa, $30; clover hay, $25.

McCracken County, Kentucky—This association has been in operation since the first of June. There are 28 members and a total of about 340 cows on test. Three cows are on official test. Feed prices are as follows: Bran, $53—$62 per ton; mixed feed, $75—$80; gluten feed, $80; cottonseed meal, $60 and $80.

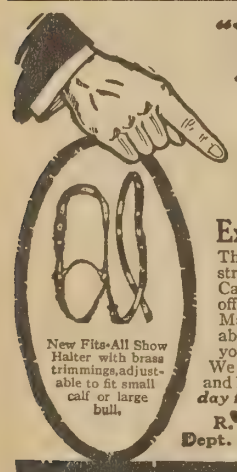
De Kalb County, Illinois:—September market milk testing 3.5% sold for $3.70 per cwt. and 4c per point above. Local feed prices are: Unicorn, $4 per cwt.; corn, $2.30; barley, $2; oats, $1.90; cottonseed meal, $3.25, oil meal, $3.35; molasses feed, $3; bran, $2.50.

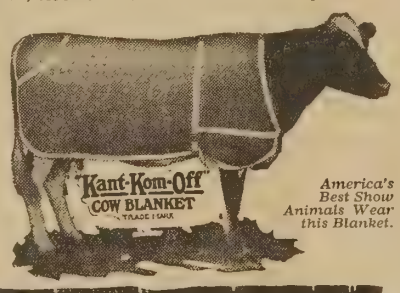
Richland County, Wisconsin—Ten unprofitable cows were sold for beef in September and five pure-breds purchased. Two pure-bred bulls were also bought. Market milk testing 4% sold for $2.16 per cwt. and 7c per point above. The condensery paid 80c per pound for fat, the creamery paid 58c, and the cheese factory 53c per pound. Milk retails for 11c per quart, butter for 57c per pound, and cheese for 25c per pound. Oil meal is rated at $70 per ton; bran, $47; alfalfa hay, $30; oats, 75c per bushel; barley, $1.20; corn, $1.90.

Edgar—Marathon County, Wisconsin—Twenty low producing cows were sold for beef during September. One more herd has been tested for tuberculosis and no reactors found. Three herds were retested and one reactor found. Many new barns have been put up and new equipment installed. Excessive dry weather is the reason for a big drop in milk flow. September market milk sold for $2 to $2.50 per cwt. The creamery paid 58c per pound for fat and the cheese factory paid 54c to 61c.

North Crandon, Wisconsin—Some members are feeding balanced rations as pasture has not been good. A carload of feed has been bought and another will soon be ordered at a saving of between $350 to $425 per carload lot. Two unprofitable cows were sold to the butcher. One pure-bred Guernsey bull was bought. The creamery paid 55c per pound for fat. Milk retails for 15c per quart, butter for 60c per pound, and cheese for 28c per pound. Feeds are rated as follows: Oats, 60c per bushel; peas, $3 per cwt.; bran, $45 per ton; oil meal, $70; Dairy Ration, $60; clover hay, $30.

West Bend, Wisconsin:—During August two barns were equipped with iron stanchions. Members are starting to feed grain with good results. The condensery paid 72½c per pound for fat. Milk retails for 13c per quart and butter for 61c per pound. Local feed prices are: Bran, $44 per ton; oats, 60c per bushel; silage, $7 per ton; pasture, $3.50 per month. This association finished its year June 30, 1920. Twenty-three herds finished the year with 255 cows. The average milk production for the association is 7,453 lbs. containing 274 lbs. fat. Twenty-three cows qualified for entry in the Register of Production. The high cow for the year is a registered Holstein owned by Chas. Backhaus, which produced 506.8 lbs. fat in 13,498 lbs. milk. The high herd, nine registered Holsteins, also owned by Chas. Backhaus, averaged 377 lbs. fat in 10,072 lbs. milk.





Progressive, New Richland, Minnesota—This association finished its year April 30, 1920. The 156 cows finishing the year averaged 6,143 lbs. milk containing 223.5 lbs. butterfat. Twenty-four cows were tested for 10 months, averaging 3,028 lbs. milk containing 124.1 lbs. fat. Eighteen cows were tested for nine months and averaged 3,389 lbs. milk, 141.6 lbs. fat. The high herd produced an average of 275.5 lbs. fat. This herd is owned by Ed. Echternach. The high cow, also owned by Ed. Echternach, produced 391.1 lbs. fat.

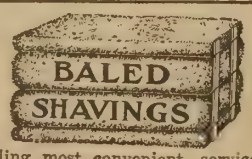
Shawnee County, Kansas—This county has two dairy herds that have passed the accredited herd test and have their certificates and three more herds are being tested. The Romig herd is also being tested and went through the first test without a suspect. This herd is on semi-official test and is in excellent condition to make a splendid record. For the third consecutive month the H. B. Cowles herd has led the association. This month they also have the high cow—a daughter of Crumpy Cow who presented her owner with triplet calves in her eighteenth year.

Ft. Atkinson, Wisconsin—Milk sold to the condensery brought $3.20—$3.35 per cwt. The creamery paid 54 to 64 cents per pound for fat. Silage cost $7 per ton; alfalfa hay, $30; bran, $50; oil meal, $66 to $70; oats, 62c per bushel; barley, 95c; pasture $1.50 per head.

Farm Bureau Progress in Vermont

Mr. E. B. Cornwall, president of the Addison County, Vermont, Farm Bureau, writes us that the second week's campaign for membership in that county has produced gratifying results. The town of Weybridge has 80% of its farmers signed up and in three other towns there has been better than 80% of the farmers enrolled on the basis of a ten-dollar-a-year membership. Canvass in three other towns is being made at present and additional towns will be taken up shortly.

"Kant-Kom-Off" COW BLANKET
This is the original and only Kant-Kom-Off blanket endorsed and used by the most successful live stock breeders. It brings your animals into the show or sales ring in glossy condition. That means more prize ribbons and higher bids. Has no equal as a protection against flies. Milch cows give more milk, stock thrives better when thus protected. An investment that will pay dividends to you.
New Fits-All Show Halter with brass trimmings, adjustable to fit small calf or large bull.
Exclusive Features
The only blanket with hip strap support of leg stay. Cannot lose off or be kicked off. Stays on day and night. Made of best and most durable material and will give you excellent satisfaction. We also manufacture stack and hay cock covers. Write today for circular and prices.



America's Best Show Animals Wear this Blanket.
R. LAACKE MFG. CO.
Dept. 96 Milwaukee, Wis.

Cow Waters Herself
With this wonderful new Libbey Automatic Water Bowl. Each bowl controls own water supply. Animal moves lever opening water valve, when it starts to drink. Lever swings back closing valve when animal stops drinking. No float tank required. Bowls may be put at different heights or in any stall or pen. Cannot overflow; cannot get out of order; almost no water left in bowl. Most sanitary bowl ever sold. Prevents spread of contagious diseases. Increased milk yield quickly pays back cost. Saves labor; saves feed. Write today. Also for Catalog . . if interested in Stanchions, Stalls, Carriers, etc. Sent free.
C. A. LIBBEY COMPANY
195 Marion St., Oshkosh, Wis.

The Pioneer Gambrel Roof
Attractive Design. Strongly Built. Adjustable Top for filling. Easy to put on. Sizes to fit any Silo. Price will Surprise you. Can fill orders promptly. We also manufacture Silo Chute. Very strong. Easy to put on.

The Milking Machine and the Cheese Industry

WALTER W. FISK, New York College of Agriculture

BECAUSE so much of the poor cheese has been attributed to the poor quality of mechanically drawn milk, the writer thought it desirable to relate his experiences last summer at a cheese factory; and, because the conditions at this particular factory were so typical of conditions over this state and other cheese producing states.

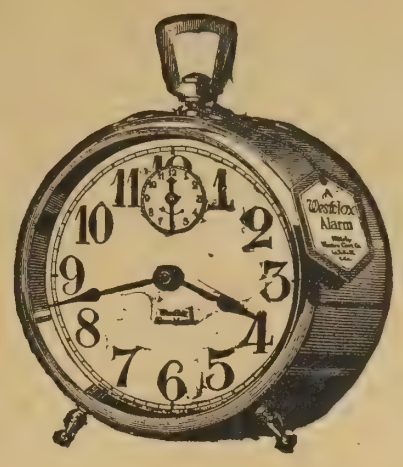
An ordinary Cheddar cheese factory in Northern New York was selected as a typical factory at which some experimental work might be done on the manufacture and quality of the cheese. On arrival at this factory, about the first of July, the weather began to become hot and the quality of the milk rapidly deteriorated. This was evidenced by the bad flavor and odor of the milk and the bad flavor and gassy condition of the cheese curd. This condition of the milk and the resulting condition of the curd was believed by the cheesemaker to be due to the milking machine.

As conditions grew worse, a threat was expressed by the cheesemaker not to receive any more mechanically drawn milk. At this point, the writer became interested to learn the difference between the hand and mechanically drawn milk and the exact conditions on the farms producing the milk. To this end, a fermentation test was made of each patron's milk. There were thirty-eight patrons, seventeen of whom had various mechanical milkers, the rest were milking by hand. This fermentation test showed that all but one of those patrons having mechanical milkers was delivering gassy milk and about half of that drawn by hand was gassy.

A campaign was started to improve the milk and an inspection was made of the farms. This showed that, with one exception, the mechanical milkers were not kept in a sanitary condition. This one was washed daily and the milk was of good quality. The others were neglected because of ignorance on the part of both the operator and the salesman. In order to make sales, the dairyman was told that it was only necessary to wash the machine weekly or, perhaps, monthly. The machines were in very bad condition, some of them not having been apart in so long that they could not be easily taken apart. All of them, with the one exception, were more or less coated with a yellow slime which is characteristic of dirty milk utensils.

At the end of two weeks, patrons delivering the hand and the mechanically drawn milk had both cleaned up conditions so that there was no gas in the cheese curd. At this point, it would have been very easy for the patrons delivering the machine drawn milk to slip back into the old rut for they did not yet know how to take proper care of their milking machine. Because some of the gassy cheese had been rejected, the patrons realized that they must have good milk or they would not obtain the best quality of cheese or the highest price. They were willing to do anything within reason to produce milk of good quality.

Various schemes of caring for the machines were tried on the different farms; some were kept in a salt solution, some in chloride of lime solution, some in the prepared Javelle waters such as B. K., and some in cold spring water. The machines were first rinsed in warm water, then washed in a solution of cleaning powder, and, lastly, sterilized with boiling water before being put into the solution. Some of the machines were taken apart and washed daily. As a bacteriological laboratory was a part of the experimental equipment of the factory, it was easy to determine the condition of each patron's milk.



By keeping the machines in the different solutions and at the same time noting the condition of the milk, some interesting observations were made. If the machine was not properly rinsed after being in some one of these solutions, the characteristic flavor of the solution was imparted to the milk. Those solutions which contained chlorine as the active agent quickly deteriorated in hot weather so that they were not effective, and chlorine quickly corrodes the aluminum parts of the machine. Some machines are not so constructed that they can be cleaned and scalded; some rubbers will not stand scalding water; some operators are not careful to thoroughly rinse the machine before placing it in the solution and then the solution quickly became milky and bad flavored; some manufacturers do not supply suitable brushes for cleaning the machines; and some operators are not careful to have the tubes full when placing them in the solution.

Gradually the method of caring for the machines was changed by the individual operators until finally each one was taken apart and the machine washed each day; after being washed, the rubber parts were put into clean, cold or salt water, or scalded and left in the air. The writer had occasion to visit this factory again this summer and no complaint was found regarding the quality of the machine drawn milk. By talking with the patrons, it was found that the machines were being washed daily.

From this experience several conclusions may be drawn. The milking machine must be kept clean the same as any other dairy utensil if milk of good quality is produced. Cheese of as good quality or even better can be made from machine drawn milk if the machine is kept clean. Undoubtedly, the easiest and most satisfactory way to keep the machine clean and sanitary is to wash it every day.

The mechanical milker must be recognized as a necessary part of the equipment on the dairy farm and if it is kept clean the same as the other dairy utensils, no objections can be found to the milk drawn by it. Because of the quality of available help, the scarcity of help, and the objections to the sanitary quality of mechanically drawn milk, many dairy farmers have gradually drifted out of dairying. This is a sad mistake and the sooner the dairy interests can be made to realize that the mechanical milker will produce milk of good quality, the sooner the dairymen will rebuild their herds.

There is no excuse for a dairyman to produce dirty milk with the mechanical milker except carelessness on his own part. A cheesemaker is not justified in blaming the poor quality of his cheese to the innocent mechanical milker. It is his duty to see that the machine is kept clean and then and only then will we have the cheese of the highest quality.

Westclox Sleep-Meter—to start the day

THERE'S something about Sleep-Meter that catches the eye, pleases it and rouses a friendly interest.

It owes its compact appearance to the trimness of its lines, the roll of the front case, the bell on the back. The novel ring adds a jaunty touch. It looks and is a sturdy, up-to-the-minute timekeeper.

It is another Westclox achievement—a fine looking, moderate priced alarm. Its trusty way of ticking off minutes, its punctual habit of sounding the rising call, its broad, deep-toned, cheerful gong have enabled it to build up a big practice.

The name Westclox on the dial and tag is your final assurance of quality—a good feature on the face of a clock.

WESTERN CLOCK CO., LA SALLE, ILLINOIS, U.S.A.

Makers of *Westclox:* Big Ben, Baby Ben, Pocket Ben, Glo-Ben, America, Sleep-Meter, Jack o' Lantern

Factory: Peru, Illinois. *In Canada:* Western Clock Co., Ltd., Peterborough, Ont.

Natco Hog Houses Help Save the Pigs

Build the farrowing houses of Natco Hollow Tile. The three hollow spaces filled with air in a Natco wall provide perfect insulation through which heat, cold or moisture will not pass. Thus Natco Hog Houses are warm in winter and cool in summer. Moisture does not condense on these walls as on other forms of masonry. And the smooth glazed surface of Natco walls is easy to disinfect—it affords no hiding-place for germs or vermin.

Natco Hog Houses soon pay for themselves in pigs saved. They cost almost nothing for upkeep—never need painting and seldom any repairs.

Write for our *free* book, "Natco on the farm."

Ask your building supply dealer to quote you on Natco Hollow Tile.

GRAND CHAMPION COWS AT THE DAIRY CATTLE CONGRESS

Left to right: De Kol Albin Princess 2d, four-year-old Holstein, owned by N. P. Hanson, Minnesota; Imp. Mildred 2d of Les Godaines, winner of Guernsey grand championship at five consecutive showings, owned by Jones and McKerrow of Wisconsin; and Betty of Lakeview, A. E. Bower's 1919 National grand champion Brown Swiss.

Eleventh Annual Dairy Cattle Congress

THE 1920 Dairy Cattle Congress, held September 27th to October 3rd at Waterloo, Iowa, stands forth in its attainments as the most notable of the eleven annual shows which have been held. In a clean-cut manner it presented to thousands of farmers, in what is potentially the greatest dairy district of the country, a high class dairy exposition. Breeders and dairy manufacturers of the middle west whose future lies in the spread of dairying and its improvement may well say of this "good and faithful servant" of the dairy industry, "Well done".

The growing success of this great annual dairy show is the more gratifying when its history is known. Born in 1910 in Iowa when hogs, steers, and corn, not dairy cattle, had a large place in the Hawkeye farmer's mind and where the schedule of endeavor seemed to be "to raise more corn to feed more hogs to buy more land to raise more corn, etc.", it had a difficult beginning. Even the weather man seemed indisposed to give this apostle of the dairy cow a chance to grow on Iowa soil, for most of the weeks of the eleven shows have been unfavorable to large attendance. One year's downpour flooded the stalls of the cattle and left the grounds a swamp.

But a few men believed in the potential greatness of Iowa as a dairy state. Their faith guaranteed a continuance of the show when gate receipts did not. Year after year improvements have been accomplished which have added to the comforts of exhibitors and have increased attendance; year after year the management has fought on to make the Dairy Cattle Congress a real show. This year's exposition led all the ten preceeding it. This "greatest dairy show west of the Mississippi River" is without a peer in the effectiveness of its appeal for improved dairy farming.

National Associations Represented

Four of the national associations maintained headquarters at the Congress. Besides serving the associations in securing new memberships, etc., such booths furnish a place for breeders to meet and also keep local showmen in touch with the national organizations. The Iowa Holstein Breeders' Association established itself with the National. Wisconsin Holstein men put up a separate, effective booth and displayed proof of the greatness of the state's Holstein population and of the justice of the assertion that Wisconsin is the "cradle of the breed".

MINNESOTA AGRICULTURAL COLLEGE DAIRY STOCK JUDGING TEAM, WINNER OF DAIRY JUDGING CONTEST AT DAIRY CATTLE CONGRESS

From left to right: M. A. Loomis, V. M. Williams, A. B. Rayburn (coach), H. A. Hass, E. J. Haslerud (alternate).

Educational Exhibits

The Iowa State College maintained a "milk bar" where dairy drinks were sold and cottage cheese equipment where A. W. Rudnick-manufactured and sold a palatable pimento cheese.

The Dominion of Canada and the commonwealths of Minnesota and South Dakota made the most of the opportunity to reach the real farmers of Iowa through attractive booths advertising the advantages of their respective lands as economical farming propositions. Minnesota made her claims on the basis of apples, potatoes, grasses, and small grains and answered the question every Iowa farmer asks in a placard statement, "Yes, we grow corn". Canada showed that vegetables, small grains, and dairy products can be sold in goodly quantity from the 128,000,000 acres now offered for sale. South Dakota emphasized the prosperity of her agriculture, showing that in 1919 the state exported $625 worth of farm products for each person in the state. It also declared that the total assessed value of the state is such that it averages $3,473 for each citizen.

Dairy Products

Only a small exhibit of dairy products was made. W. S. Walsh of Wisconsin won first prize with cheese scoring 94. In the gathered cream classification, W. S. Clemmensen of Iowa received the first award with butter scoring 95½, second place going to D. W. Mohler of Iowa whose butter scored 94½. In the whole milk division butter made by E. M. Quiney of Iowa and scoring 96 won the blue. L. C. Ladage of the same state took second with butter scoring 95¾. A notable feature of the products show was the butter sculpturing of J. E. Wallace of Nebraska who makes butter do quite as wonderful things in statuary as Dr. McCollum has it doing in the human diet.

Six States in Student Contest

Six middlewestern states entered teams in the third annual collegiate judging contest. Minnesota won first honors: Iowa, second; Missouri, third; Nebraska, fourth; Kansas, fifth; and South Dakota, sixth. The Minnesota team made the highest score on Holsteins and Jerseys; Kansas on Ayrshires; and Missouri on Guernseys. The five high men of the contest were M. C. Loomis of Minnesota; W. D. Jefferson, Iowa; H. H. Slayton, Iowa; K. M. Williams, Minnesota; and J. E. Crosby, Jr., Missouri, in the order given. A class of bulls and of females from each of the four breeds was placed and oral reasons on four classes were given. Professor J. A. McLean served as judge of placings and reasons.

The Cattle

In the management of a dairy show, the "proof of the pudding" lies not so much in the concession space sold or the number of curious spectators which can be drawn through the gates as in the character and size of the dairy cattle exhibit. Judged on this basis, the Congress is unexcelled.

GRAND CHAMPION BULLS AT THE DAIRY CATTLE CONGRESS

Left to right: The Jersey two-year-old, Fashionable Fern Lad, owned by Longview Farm, Missouri; the three-year-old Holstein, Johanna Glenda Lad, owned by Mayowood Farms, Minnesota; and Cavalier's Sherry Redman, senior Ayrshire calf owned by Adam Seitz of Wisconsin.

No exhibition of the season offers greater opportunity for intelligent study of types and for comparisons of the five breeds. The stalls were full to overflowing with strictly high class individuals, a total of 545 head being stalled and shown. The absence of unworthies was strikingly noticeable.

Of special interest was the friendly state rivalry in the Holstein judging, engendered by four competing state herds. This commendable plan of giving a state advertising before show crowds and of enabling a number of small breeders to exhibit their cattle in such shows as the Congress, bids fair to continue to increase in popularity.

Jerseys

Eight exhibitors from five states brought ninety-one head of Jerseys. The showing was not as large as in some years, but the quality was highly creditable. A. M. McClenahan of Colorado showed twenty-four head. The only other large herd was that of Longview Farms, Missouri, which has campaigned from Sedalia to Louisville and back for the two last northern shows. At Waterloo it maintained its battle record taking sixteen firsts and five of the six purples. Professor J. A. McLean made the appraisals.

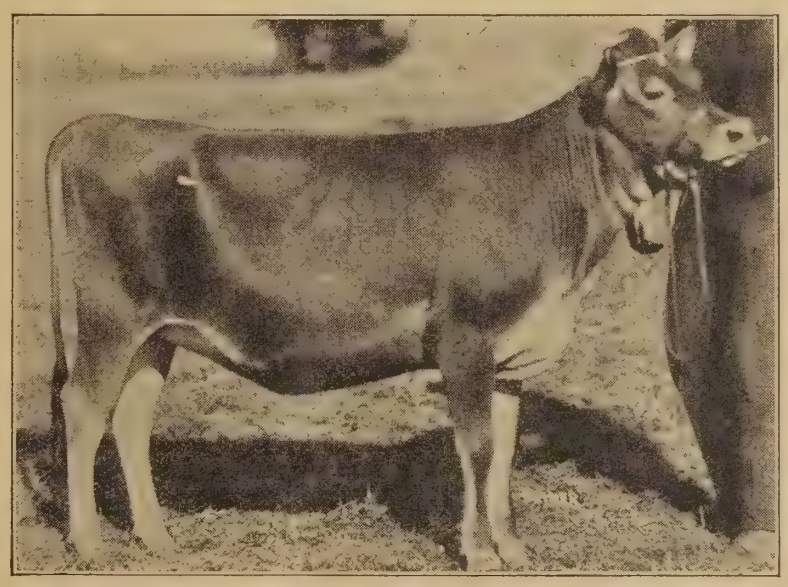
In a weak aged bull class Financial Beauty's King, owned by Meredith Jersey Farm, was an easy winner. He has great length, good lines, and dairy conformation but lacks the finish, masculinity, and breed character to be a strong contender in heavy competition. He met two better show types in the contest for senior championship: the three-year-old, Chief Raleigh; and Fashionable Fern Lad, a year younger, both owned by Longview. The latter, grand champion at Sedalia and Louisville, defeated Noma's Perfect Raleigh in class, a bull twice junior champion at the National, but lacking the strength of top and the length of the winner; the two-year-old was a popular grand champion. W. A. Brewerton of Illinois exhibited three head and landed all in the money. His yearling bull, Raleigh's King Thornbury, grand champion at the Wisconsin state fair, led his class. Longview won in the calf line-ups and showed the senior, Wolff's Chieftain 2d, to junior championship.

The writer selected Sly Puss P, a twelve-year-old cow, from the Longview herd, as an outstanding leader of the aged milkers. She was shown dry but he considered her breed character, clean cut form, quality of udder, and size entitled her to the blue ribbon. After the judge's decision he remarked his catalogue to give first honors to Westfield Girl, grand champion at Milwaukee and owned by A. M. McClenahan. Mr. McLean credited the winner with greater spring of rib, a better shaped udder, and larger milk veins. Longview's Golden Matron was shown blemished and drew third money. M. E. McMurray's Des Moines Champion fell to fourth rating. Raleigh's Star of Peace, Sedalia Champion, and Rochette's Noble Nina, Illinois, Louisville, Columbus, and Indianapolis champion led the four- and three-year-olds respectively. Both come from the Missouri herd. The aged cow defeated them for senior championship but lost, in turn, to Raleigh's Miriam, a Longview senior calf, for the highest honor.

The following lists the complete awards:

Bull 4 years or over—1, Meredith Jersey Farm on Financial Beauty's King; 2, Reinheimer on Ibsen's Golden Prince; 3, Campbell on Maximilian You'll Do. Bull 3 years or over—1, Longview Farm on Chief Raleigh. Bull 2 years, under 3—1, Longview on Fashionable Fern Lad; 2, Reynolds on Noma's Perfect Raleigh; 3, McClenahan on Majesty's Feather Lad; 4, Reinheimer on King's Golden Pride. Bull 1 year, under 2—1, Brewerton on Raleigh's King Thornbury; 2, Longview on Manora's Fairy Lad; 3 and 4, McClenahan on Financial Dainty Prince and Maj. Defiant Count; 5, Reynolds on Raleigh's Fairy Sultan. Bull calf 6 months, under 12—1 and 2, Longview on Wolff's Chieftain 2d and Blue Feather's Raleigh; 3, Reynolds on Flower's Fairy Raleigh; 4, Reinheimer on Fair Martha's Prince; 5, Campbell on You'll Do Bobbie. Bull calf under 6 months—1 and 3, Longview on Star's Fairy Lad and Buttercup's Butter Lad; 2, Reynolds on Bella's Perfect Raleigh; 4 and 5, McClenahan on Bosnian's Shy Duke and Canoness' Shy Raleigh.

Cow 5 years or over—1, McClenahan on Westfield Girl; 2 and 3, Longview on Sly Puss P. and Golden Matron; 4, McMurray on Fox's Lucy of Ingleside; 5, Campbell on Minnetta's Golden Fern; 6, Reynolds on Lula Burrier. Cow 4 years, under 5—1, 2, 3, Longview on Raleigh's Star of Peace, Queen's Raleigh's Nimay, and Fountaines Nema; 4, Reinheimer on Mrs. Fox's Marigold. Cow 3 years, under 4—1, 2, 4, Longview on Rochette's Noble Nina, Raleigh's Lily White, and Fairy Flag; 3 and 5, McClenahan on Western King's Flora Dora and Ruby's Financial Girl. Heifer 2 years, under 3—1 and 6, McClenahan on Jubilee Oxie and Majesty's Peachy; 2, Campbell on Sweet Marie's Rhea; 3, 4, 5, Longview on Viola's May Fern, Raleigh's Queen Manora, and Raleigh's Fairy Finance. Heifer 18 months, under 2 years —1 and 2, Longview on Raleigh's Blue Feather and Raleigh's Queen o' The Night; 3 and 4, McClenahan on Major Finance Oxford and Princely's Sweet Star; 5, Reinheimer on Fair Martha's Princess. Heifer, not in milk, 12 months, under 18—1 and 4, Longview on Raleigh's Royal Fairy and Raleigh's Golden Brightness; 2, McMurray on Financial Gambogess; 3, McClenahan on Princely's Sweet Rose; 5, Brewerton on Raleigh's Bessie Thornbury. Heifer calf 6 months, under 12—1 and 2, Longview on Raleigh's Miriam and Raleigh's Pretty Maiden; 3, Reynolds on Raleigh Carnation Flower; 4, McClenahan on Maj. Cowslip's Feather; 5, Brewerton on Miss Pennithorpe-Thornbury. Heifer calf under 6 months—1 and 4, Longview on Raleigh's Starling and Raleigh's Royal Maid; 2 and 3, Reynolds on Raleigh Calora Flower and Perfect Raleigh's Countess; 5, McClenahan on Maj. Feather Lad's Tiz.



Exhibitor's Herd—1 and 2, Longview; 3, McClenahan; 4, Campbell. Breeder's Young Herd—1 and 2, Longview; 3, McClenahan. Calf Herd—1, Longview; 2, McClenahan. Get of Sire—1 and 2, Longview; 3, McClenahan. Produce of Cow—1, 2, 3, Longview; 4, McClenahan; 5, Campbell. Dairy Herd—1, Longview; 2, McClenahan.

Senior and Grand Champion Bull—Fashionable Fern Lad. Junior Champion Bull—Wolff's Chieftain 2d. Senior Champion Cow—Westfield Girl. Junior and Grand Champion Cow—Raleigh's Miriam.

FIRST PRIZE GUERNSEY GET OF SIRE AT DAIRY CATTLE CONGRESS

Including four first prize winners and two junior champions, Honey Bloom of the Prairie, at the left, and Prince Charming of the Prairie at the right of the group. This get is by Cherub's Prince, grand champion of the show, and is owned by W. W. Marsh of Iowa.

RALEIGH'S MIRIAM, JUNIOR AND GRAND CHAMPION JERSEY FEMALE AT DAIRY CATTLE CONGRESS

Owned by Longview Farm, Missouri

Guernseys

One hundred forty-six Guernseys from twenty different herds made by far the largest showing the breed has ever made at the Cattle Congress. Iowa led with 64 animals owned by 8 exhibitors, followed by Wisconsin with 36 head from two herds, Vermont and Montana each brought out 17 entries, in each case representing a single herd, and Minnesota showed 12 head owned by 8 exhibitors, this last a state show herd and the only one for the breed at the show. The quality of the exhibit as a whole was equally pleasing, with class after class showing a gratifying lack of tail enders.

Cherub's Prince at the head of the Marsh string and owned jointly by W. W. Marsh, Chas. L. Hill, and F. J. Reuping, was the outstanding individual among the 8 in the aged class. He was, in fact, the outstanding bull of the show and a most popular senior and grand champion. Judge Fitch did not, however, have as easy winners in most of the younger classes, and among the two-year-olds and yearlings the leaders could have been put farther down without much criticism. Prince Charming of the Prairie, the Marsh senior calf, was junior champion, winning over Mountain Bros.' first prize yearling, Simplicity's Winner of Iowanola, and U. A. Woodbury's (Vermont) Deanie's Marose of Appletree Point, the winning junior calf.

Competition among the ten aged cows was keen, particularly between Imp. Mildred 2d of Les Godaines owned by Jones & McKerrow and the Marsh entry, Imp. Hayes Express 5th. The former with her scale, wonderfully good type, and exceptional veining was an outstanding first except for her udder that showed very pendulous and not entirely normal, due to recent freshening and the fact that she was too heavily bagged. The Marsh entry, on the other hand, carried an exceptionally good udder both as to shape and quality, but lacked the scale and veining of the other and was just a little plainer in the head and at the tail setting.

Among the six three-year-olds were at least four keen competitors with Kate of Aurelian Farms and Adel of Burnham Beach apparently the strongest contestants. The judge ruled otherwise, however, and when the ribbons were placed they stood second and fifth respectively with Mountain Bros.' Engleside Pretoria Queen in first place. Jones & McKerrow's two-year-old, Century Girl of Edgemoor, a daughter of Imp. Mildred 2d of Les Godaines, was an easy first, but neither she nor any of the others was good enough to defeat the aged cow for senior championship.

The senior yearling class brought out the sensation of the junior female classes, Honey Bloom of the Prairie, owned by W. W. Marsh. Her type and quality are of the best and if she but develops as she promises, she will go far in any ring. She was a most popular junior champion.

The real battle royal was for the grand championship. On one hand was a wonderful promise, on the other a wonderfully good cow that had arrived, and while her udder was against her the fact that she had otherwise so nearly approached the Guernsey ideal type won for her her fifth consecutive grand championship this year.

J. B. Fitch made the placings, a complete report of which follows:

Bull 3 years or over—1, Marsh on Cherub's Prince; 2, Kingston and Son on Hopeful of Edgemoor; 3 and 5, Jones and McKerrow on Bonnie Boy of Riverdale and Chene King; 4, Mountain Bros. on Kitchener's Express. Bull 2 years, under 3—1, Marsh on Marie's Cherub of the Prairie; 2, Woodbury on Rose's Golden Cherub; 3, Golinvaux on Grace's Memento; 4, Hughes on Betty's Prince of Prospect Hill; 5, Dairyland Farm on Cloth of Gold's King. Bull 1 year, under 2—1, Mountain Bros. on Simplicity's Winner of Iowanola; 2, Dairyland on Lalla's Prince; 3, Marsh on Golden Laddie of the Prairie; 4, Jones and McKerrow on Dora's King; 5, Woodbury on Cherub's Bo-Peep Prince of Appletree Point Farm. Bull calf 6 months, under 12—1 and 5, Marsh on Prince Charming of the Prairie and Blossom's Prince of the Prairie; 2, Golinvaux on C. C. Memento; 3, Kammiller and Carr on Oh Boy of Fairmont; 4 and 6, Mountain Bros. on Lilly's Express of Iowanola and Dorothy's Cherub of Iowanola. Bull calf under 6 months—1, Woodbury on Deanie's Marose of Appletree Point; 2, Steele on Bonny Boy of Maplewood; 3, Kingston on Aristocrat of Muskego; 4, Mountain Bros. on Lydia's Express of Iowanola; 5, Marsh on Excelsior of the Prairie.

Cow 5 years or over—1, 4, and 6, Jones and McKerrow on Imp. Mildred 2d of Les Godaines, Imp. Bordeaux of Courtil Brie, and Governor's Ella of McKerrow's Farm; 2, Marsh on Hayes Express 5th; 3, Conklin on Cifs; 5, Kingston on Violet of Tol Val. Cow 4 years, under 5—1, Frizzell on Susie of Skillet Creek; 2, Dairyland Farm on Velma of Mapledell; 3, Mountain Bros. on Engleside Pretoria Vrangue; 4, Schmidt on Glenwood Daisy's Rouge of Grand Home; 5, Woodbury on Morning Glory of Appletree Point. Cow 3 years, under 4—1 and 4, Mountain Bros. on Engleside Pretoria Queen and Simplicity Glenwood of Iowanola; 2, Jones and McKerrow on Kate of Aurelian Farms; 3, Woodbury on Fisherman's Ellerslie; 5, Hageman on Adel of Burnham Beach. Heifer 2 years, under 3, —1, Jones and McKerrow on Century Girl of Edgemoor; 2, Kingston on Itchen Queen of Edgemoor; 3, Mountain Bros. on Lady Ruth of Iowanola; 4, Dairyland on Genevieve of Mapledell; 5, Woodbury on Katherine Ridgeway of M. G. Best 2-year-old heifer in milk —Mountain Bros. on Lady Ruth of Iowanola. Heifer 18 months, under 2 years—1 and 2, Marsh on Honey Bloom of the Prairie and Golden Locks of the Prairie; 3, Jones and McKerrow on Edelweiss of Edgemoor; 4, Mountain Bros. on Dorothy Arnold of Iowanola; 5, Hagness on Ferby's Kathleen of A. D. F.; 6, Kingston on Lilian of Edgemoor. Heifer not in milk, 12 months, under 18—1, Marsh on Princess Pretoria of the Prairie; 2, 4, and 5, Jones and McKerrow on Spring Maid of Edgemoor, Dancing Girl of Edgemoor, and Ultra's Governess Chene; 3, Kingston on Wonder Girl of Muskego. Heifer calf 6 months, under 12—1 and 4, Marsh on Sensation of the Prairie and Honeydew of the Prairie; 2, Kingston on Hopeful Miss of Sun-

(Continued on page 550)

EDITORIAL COMMENT

In this country the consumers want food cheap, while the producers of food do not. This is a basic fact in human nature beyond which statute law and the powers of government cannot go. The only real law between consumer and producer is the law of supply and demand. If the food is bountiful then the prices will be low and the producer must submit; if the food is scarce the prices will be high and the consumer must submit.

The general clamor to have prices regulated by law is urged by two classes of men—crank reformers and demagogic politicians. The latter always follow in the wake of the farmer like vultures after an army on the march.

In an editorial September 3, 1920, we made the statement that through co-operative effort the farmers of the United States effected a saving of $5,434,000 last year. A much larger saving was made than by this co-operative effort of farmers. We should have stated that co-operative farmers' associations in the northern and western states, whose organizations were promoted by county agents last year, effected a saving to its members of $5,434,000.

It should be borne in mind that there are many successful co-operative enterprises which have not been organized by county agents. Mr. R. N. Wilson, secretary of the Agricultural Legislative Committee of California, called our attention to the fact that the co-operative organizations of that state effected a much larger saving to its members than $5,434,000. Our editorial pointed out the value of intelligent co-operative effort and the saving of $5,434,000 is a sum sufficient to well illustrate the point of the editorial, but since the saving of $5,434,000 was directly attributed to the county agents of the North and West, it is only right that we should make this statement of correction.

COST OF PRODUCTION AND FIXING PRICES

It has been held by many that the only true way to arrive at the proper price for farm products is to consider the cost of production and then add a fair profit. This would be fixing prices arbitrarily and disregarding all other factors. We have never been able to accept this as being wise to advocate or to practice. We do not believe that it can be carried out successfully; moreover, that farmers would desire any such plan of selling their products if they fully understood its results.

Elsewhere in this issue will be found an article, entitled, "The Story of the California Raisin Trust". In discussing the fixing of prices Mr. Steen says: "At first prices were fixed on the basis of cost of production plus a fair profit. This was soon abandoned because it was not practical. One year the cost might be 2 cents per pound, the next year 5 cents per pound. The consumer who eats raisins cares nothing for the cost of production. He adjusts his purchases to his wants and the prices he must pay. The raisin growers soon fell back on the law of supply and demand which they discovered was not so bad when the manipulation was removed from it."

It seems to us that what is desired in the marketing of farm products is to eliminate the speculator as far as possible and have the farmers cooperate in preparing their products for market and in directing their sale. The man who produces an article has a right to set a price on it. A farmer who has a cow to sell sets the price or at least consents to an offer. He has the same right in selling any of his products, but before he sets prices on them, he should determine the supply of the products and how much the market will pay.

It can be said that unless the farmer receives the cost of production he will fail. No business can exist unless it sets a price for its commodity that will return cost of production plus a fair profit. Our efforts should be directed upon the organization of intelligent co-operative arketing enterprises. Depend upon the farm bureau and other agencies for securing statistics and information indicating the supply of various farm products and their prospective demand and then see that the law of supply and demand is not curtailed or suppressed. The raisin growers' experiences soon led them to see the fallacy of fixing prices upon the cost of production plus a profit and they returned to the law of supply and demand for determining the market prices of their products. The principle of marketing raisins is the same as the principle of marketing dairy products. The dairy farmer should well consider the experience of the raisin grower for it will assist him in formulating plans to conduct his business on the proper basis.

BUTTER VS. OLEOMARGARINE

At Rochester, New York, an experiment was made to determine the relative value of butter and oleomargarine in the feeding of children. Seven children whose average age was 11 years were fed on a uniform ration except that the butter fed in the first six months' period was replaced by oleomargarine the second six months. During the third period of six months butter was again furnished. The average gain made by each child for the first period with butter was 4.93 lbs.; with oleomargarine for the second, 2.89 lbs.; and with butter for the third period, 7.69 lbs.

It has been stated by the manufacturers of oleomargarine that it is wholesome, nutritious, and equal to butter for nourishing children. Experiments carried on with young animals show that vegetable and animal fats are not equal to milk fats for producing growth.

The experiment carried on at Rochester, New York, in order to compare the food value of butter with oleomargarine, was the first to be conducted with children. The results obtained from this experiment are more striking than we had anticipated. It should be borne in mind that the ration the children received was the same, except in two periods of six months each they received butter and in one period of six months oleomargarine. Without question, no milk formed a part of the diet of the child. Those who hold that oleomargarine is as good a food as butter for the growing child should think well of the results obtained in the experiment conducted at Rochester, New York.

FARM LABOR

Mr. W. R. Hale, manager of Wilco Farms, Illinois, takes issue with us upon the question of farm labor. We publish elsewhere in this issue a communication from him, and in the following editorial discuss some of his statements.

We have recognized for several years that there has been a shortage of farm help and that a great deal of it has been incompetent. While this is true we do not think that from the standpoint of agriculture, as a whole, we are in serious condition. Without question, certain farmers, especially those with large acreage, have been placed in a serious situation because of the lack of labor and its incompetency.

We are not unmindful of the fact that in certain sections of Michigan and New York there are a number of thousands of idle farms. These farms are not operated because many of them are very poor in fertility, nonproductive, and because industries have offered a higher price for labor than could be obtained from the operation of these farms. Without question the men who own these farms, or the men who have to operate large farms in sections where there is a large demand for labor in the mines, steel mills, or factories, have had to contend with situations which may be termed serious. But, notwithstanding this, agricultural production is above the average.

This spring a number of manufacturers became concerned about the farm labor situation and held several meetings. At some of these sessions statements were made that led a number of these good business men to feel that we were to have famine in this country; that the prospective wheat crop would be far below our needs, and so it was in the case with many other crops.

At that time there was no way of knowing even the approximate production of wheat but with the acreage of winter wheat, with its prospective acreage to be sown to spring wheat, we did not consider that there was any information to indicate that we would be short of breadstuff, nor could we see from the acreage and reports any necessity of being concerned about the lack of supply of other crops. The government reports now indicate that we have almost an average wheat crop and with the three hundred million bushels left over it gives us over one billion bushels of wheat or nearly enough to supply us for two years. Our corn crop is one of the largest in the history of our country; our potato crop is above the average as also our oats and rye. Flax is about up to the average. Milk production has been sustained and in New York at the present time the condenseries and evaporated milk plants are closed. Market conditions of condensed and powdered milk do not warrant them to continue their manufacture. There is a surplus of these products.

It is plain that we could not have produced this good crop and saved it as we have unless there had been labor. We have recognized that the farmer has to wor harder than he should; that the season was favorable; but the very fact that the crops have been produced in larger quantities than the average does not indicate that there has been a serious shortage of farm labor when agriculture is considered as a whole. The most serious part, we believe, of the agricultural situation today is our large production and it is somewhat an open question as to whether the markets of this country and of Europe will absorb our crops at a price in keeping with other commodities.

Our editorial entitled, "South Over-supplied with Labor", was written to point out how agricultural practices there could be improved and how labor could be utilized to better advantage. It needs no argument that a strong, robust person can handle more than one mule. If the South were to give every farm laborer two mules to handle, it would almost double the amount of work that is being done at the present time. It is not uncommon to find on well managed farms men, driving 4 to 6 horses, doing nearly 4 to 6 times the amount of plowing or cultivation that is done by one man and one mule.

Further, we must take into consideration that the tractor and the truck have come into use, making it possible to do more work with man labor on the farm. In short, there are labor saving devices of all kinds which have made it possible for a reasonable number of people to leave the farm without seriously handicapping our agricultural production. We would not have it inferred that we do not appreciate that there is a shortage of farm labor and that more could be used, but we do not see that the farm labor question is serious when we are producing more than we need to feed and to clothe our people.

In other words, we view the agricultural labor situation not from the standpoint of individuals operating large farms but rather from the whole and have considered that notwithstanding the shortage of labor we have produced one of the largest crops in our history and if we have a serious situation it is because of over-production rather than under-production.

How Much Meat and Butter

For family of eight including two children, what estimate of dressed pork should be sufficient for a year, the pork to be worked up in smoked hams,

shoulders, and a few dressed in summer months, for use during harvest and threshing? Same family has one dressed beef early in winter, dressing about 600 to 700 lbs. for fresh meat and canning, which should be taken into consideration.

How much butter for home consumption should be sufficient?

Dickinson, N. D. W. R. E.

Miss Marlatt, of the Home Economics Department of the Wisconsin College of Agriculture, replies to this inquiry, as follows:

"There are two possible answers. If the family is willing to use meat but once a day and will depend to some extent upon poultry and fish, they would need for bacon, ham, shoulders, side meat, head cheese, pickled pigs feet, and sausage, four hogs, dressed weight 180 lbs. each. This is an estimate, of course, and is on the basis that they would need one-half pound of meat a day per person, which is a fairly liberal allowance. However, remembering the experience of my childhood days on the farm, I am inclined to think that the majority of farm hands would demand meat in some form three times a day. Under such conditions there might easily be required one pound of meat per day per person in place of one-half pound. This would double the number of hogs required.

"With reference to the amount of butter which would be required for home consumption, we would state that for eight people one-half a pound to three-fourths of a pound a day should be sufficient for table use alone. If butter is used for cooking, it is very difficult to make any estimate of the amount which would be used."

Reseeding Alfalfa

I seeded Grimm alfalfa last spring. It came up well but a heavy rain washed under many plants. Alfalfa is now ten inches high but is thin in spots. Should I sow more seed this fall, or wait until spring? Many alfalfa plants are turning yellow. What causes this?

Muscoda, Wis. B. E. S.

While alfalfa seeded in the fall may make some growth and possibly live through the winter, it would be preferable to defer seeding until early spring. The thin spots can then be seeded by hand just as the frost is coming out of the ground or when the ground has become somewhat settled. The disk drill may be run over the field and both alfalfa and a light seeding of oats may be made. We have followed the latter method with very good results and we believe it will prove satisfactory under the conditions outlined. The oats help to keep down the weeds and at the same time will add somewhat to the hay crop from the first cutting.

The plants turning yellow indicates a lack of nitrogen in the soil or possibly that the soil itself may be somewhat acid. This may be corrected by applying a light dressing of manure in the first case or the use of, say, two tons of ground limestone per acre if the soil is acid. It is possible that neither of these conditions exist and that the color of the alfalfa is merely due to a drouthy season which it may have passed through and that this difficulty will be wholly overcome next year.

Feeding Sugar Beets

Are sugar beets good for dairy cows and what is their feeding value? Are they hard on their kidneys?

Wayland, Mich. R. H. R.

Sugar beets are an excellent feed for dairy cows but because of the labor in harvesting and the expense of handling, we do not consider them as economical as corn silage. They have a larger amount of nutriment than mangels or rutabagas but it is generally held that the latter will yield somewhat more per acre and are less difficult to handle. Sugar beets are not hard on the kidneys but if fed in too large quantities there is a tendency to scour the animals. This is due to the high sugar content of the beet.

Sugar beets may be fed in such amounts as the cow will consume with relish and to the extent that they will not tend to cause scours. It would be well to start with not over 20 lbs., gradually increasing this to 30 to 40 lbs. We have known of mangels being fed in amounts up to 80 or 100 lbs. but we question whether this would be desirable in the case of sugar beets.

Sugar beets will contain, on the average, about 16 lbs. of dry matter and this dry matter is considered equal, pound for pound, to the dry matter found in grain. Some investigators consider beets as being a form of watery concentrate rather than a roughage like silage, and that they will replace grain at the rate of about 5 to 6 lbs. of sugar beets to 1 pound of grain. They are nearly equal, ton for ton, to corn silage in feeding value and as compared with mixed clover and timothy, it would take about 3 tons of sugar beets to equal 1 ton of mixed hay.

Winter Wheat Sowed by Mistake

Kindly advise me about my wheat. I bought some summer wheat and sowed it and now it turned out to be winter wheat instead of summer wheat. As soon as I saw that it was not summer wheat I pastured it. Now I will spread manure over it and can I leave it lay and raise a crop of it next spring? Some say I can and some say I can't.

Kiel, Wis. H. D.

There are no experiments to show what results you will get if you leave this wheat intending to raise a crop from it next spring. However, I would not recommend it as the chances are the wheat has attained such a growth that it will winter-kill rather easily. I have experimented with sowing winter wheat during July and have found that it attained such a growth that it was entirely winter-killed. However, if pastured closely you may have checked the growth enough so that it would be safe to leave it. It could be plowed next spring if it showed too much winter-killing and another crop put on the ground. If you top-dress this with manure you must be very careful to use fine manure and have it well spread as small bunches of the manure will almost certainly kill out the wheat under it.

With these suggestions in mind you can probably determine for yourself whether the winter wheat is in such condition that it will be safe to let it go through another winter.

B. D. LEITH.

Wisconsin College of Agriculture.

Ropy Milk

A neighbor of mine sells milk to a milk man and the milk man claims that after the milk sets for fifteen to twenty hours that the cream on the milk gets ropy. This neighbor is feeding his cattle mostly silage and his pasture is poor and he feeds some grain. What would be the cause?

Stroudsburg, Pa. J. A. B.

Ropy milk is due to bacteria which get into the milk from outside sources and it is not always easy to locate the source. Sometimes this may come from the water in which the cans or milk utensils are washed; sometimes from the water in the cooling tank and sometimes from bacteria which the cattle may pick up on their udders and bodies by wading through marshy ground or other wet places. Sometimes it may come from a stable infection, but this would be very unusual. About the only method to pursue is to exercise particular care that all milk utensils are thoroughly sterilized with boiling water and are then allowed to dry out thoroughly, either with artificial heat or by standing in the sun.

If this does not overcome the trouble, the next point of attack would be to see that the cooling tank is thoroughly cleaned out and preferably disinfected with a 12-ounce can of chloride of lime or bleaching powder to 100 gallons of water. As an additional precaution, all milk utensils might well be immersed in this solution. If neither of these treatments remove the trouble, then recourse should be had to keep all possible contamination away from the cows and out of the milk.

It may be possible that the water tank is the source of the infection, in which case it would be necessary to clean and disinfect this. The infection may come through the cows wading through wet places in the pasture, and the only proper procedure then is to restrict the cows from such areas. In addition, it would be well to see that the cows are thoroughly brushed off and possibly the udder and flanks washed in a disinfecting solution somewhat similar to that used for the milk cans. In all cases where the disinfecting solution is used, care will have to be exercised that it be properly rinsed off or time permitted for the odor to evaporate; otherwise, the milk will take up this odor.

Size of Cow Stalls

Kindly let me know the standard width of a cow stall and what is the regulation length for ordinary cows from manger to edge of gutter.

Harlem, Mont. J. A. S.

The standard width for cow stalls is three feet, six inches, although in the case of Jerseys and where there is a special desire to gain additional room, the width is sometimes cut to three feet, three inches. However, most present-day barns are built in 14-foot bents, which makes it more convenient to install 4 stalls to every bent. In case posts intervene, it may be necessary to vary the width somewhat but we would hesitate to recommend anything less than the standard width of three feet, six inches.

The length of a cow stall should vary according to the size of the cows. The smaller breeds, such as the Guernseys and Jerseys, will ordinarily be accommodated on a platform 4½ feet long between the stanchion and the gutter. The larger breeds, such as the Holsteins and Shorthorns, will require as much as 5 feet. It is also necessary to provide for heifers as well as aged animals, and for this reason provision is made in some barns so that the platform will be, say 4 feet six inches at one end and 5 feet at the other. However, with the patent stanchions now on the market, it may be quite as well to have the length about right for the medium sized cow to be kept and this can be varied to suit each individual by means of the alignment device which is common to practically all these patent stalls.

Selling Milk and Cream

My father sells 100 quarts of milk daily from a herd of ten Guernseys whose average test is 4.6% butterfat. The wholesale dairy to whom we sell our milk has made us the following offer: To take all our milk at 10c, all our cream at 80c, or part milk and part cream. Which would be the most profitable? We raise calves and so could get rid of the skimmilk.

St. Paul, Minn. W. V. F.

Selling the milk as whole milk would bring $10 for the hundred quarts. This amount of milk would weigh approximately 215 lbs. and if it tests 4.6%, it would contain 9.89 lbs. fat. At 80c per pound fat this would give a return of $7.91. According to these figures, our inquirer would have to receive a return of $2.09 from the somewhat less than 200 lbs. of skimmilk that he has left on the farm through selling cream.

For feeding pure-bred or high grade calves, we consider skimmilk to be worth not less than $1.00 a hundred and, in most cases, it is worth considerably more than this. However, it is quite possible that the cows are producing more milk than can be economically consumed by the calves and for this reason it might prove profitable to sell the surplus milk and only separate enough to provide skimmilk for the calves. Indeed, for feeding calves under six months of age, we do not feel there is a desirable substitute for skimmilk. We appreciate that men have had success in feeding skimmilk substitutes but it requires greater care and it is seldom that these calves will show as good growth or be as attractive as animals receiving skimmilk.

Emptying Test Bottles

HOARD'S DAIRYMAN:—Getting the cold acid and milk from a milk test bottle is a disagreeable job. One likes to make the test and get the stuff into the bottles but the cleaning up is another matter. Some years of testing have taught me that there is an easier way to clean out the test bottles.

When I was making regular trips to certain farms on official testing work I had a bottle emptying device there waiting for me. I made it during sparetime and put it away when I was ready to leave for the next job.

In lots of cases the vessel used for emptying the acid and milk into was a crock. Acid doesn't harm this sort of a vessel as it would any tin or metal vessel. So I had a board with holes bored through that would allow the neck of the bottle to pass through easily and not the lower part of the milk test bottle. Then I could warm a cold bottle up and dump it into the crock, then another, and so on until one or two were empty. These would be taken out and others placed in the holes over the crock.

Not only are your fingers saved from a pretty hot hand hold but the work can be done five times as fast since one can only hold two bottles at a time and must wait until they are all emptied before getting two more bottles. The time saved is valuable on a big testing job.

In a few places where I had to empty bottles in a sewer I made a board with the holes in and two standards at the ends. This made the stand higher than the length of the bottle necks.

Ohio. EARL ROGERS.

Eleventh Annual Dairy Cattle Congress

(Continued from page 547)

ny Slope; 3, Jones and McKerrow on Topsy's Ultra Lily; 5, Mountain Bros. on Kitchener's Pet of Iowanola. Heifer calf under 6 months —1, Jones and McKerrow on Chene King Northern Lady; 2, Marsh on Mayflower of the Prairie; 3, Woodbury on Appletree Point's Dolly Dimple; 4, Skaar; 5, Golinvaux on Cherry Pit; 6, Kingston on Dame of Muskego. Cow having official yearly record begun at 2 years, under 5—1 and 4, Jones and McKerrow on ———— and Governor's Ella of McKerrow's Farm; 2, Mountain Bros. on Engleside Pretoria Vrangue; 3, Hageman on Adel of Burnham Beach; 5, Schmidt on Marcus Glenwood's Daisy.

Exhibitor's herd—1, Jones and McKerrow; 2, Mountain Bros.; 3, Kingston; 4, Dairyland Farm; 5, Schmidt. Breeder's young herd—1, Marsh; 2, Mountain Bros.; 3, Woodbury; 4, Bohart. Dairy herd—1, Jones and McKerrow; 2, Mountain Bros.; 3, Schmidt; 4, Woodbury; 5, Bohart.

Senior and grand champion bull—Cherub's Prince. Junior champion bull—Prince Charming of the Prairie. Senior and grand champion cow—Imp. Mildred of Les Godaines. Junior champion cow—Honey Bloom of the Prairie.

Holsteins

The Cattle Congress has never seen a Holstein show to compare with this year's. Not only was it larger than previous shows, but in point of quality it was way ahead of any previous Congress. Ordinarily one or two animals in a class are outstanding, but here there were many classes where the difference between first and second or even between first, second, and third was a matter of fine points or personal opinion.

The credit for this improvement, to a considerable extent, at least, belongs to the state breeders' associations that are responsible for the state herds, for besides state herds there were but three large exhibitors, Cass Farms of Iowa with 26 head, Marlow and Randall, Minn., with 13, and the Minnesota Holstein Co. with 12. The Wisconsin state herd included 27 animals entered by 17 exhibitors; the Kansas lot, 19 from 9 herds; and the Minnesota exhibit 23 head from 12 different herds in addition to the two above mentioned. Iowa added to this 58 animals entered by 11 exhibitors bringing the total of the black and white show to 152 animals representative of 51 midwest herds. In addition a Nebraska herd of 19 animals was scheduled to appear but failed because of transportation difficulties.

Although there were only four entries among the aged bulls competition was keen, and the ringside followers were pretty well divided into three camps, each of them sure that a different entry was the winner. Johanna Bonheur Champion 2d from the U. S. D. B. herd of Kansas, a consistent winner at earlier fairs, was in the best of form and found favor in the judge's eye. He is a little small and not stretchy enough to suit every one, but showed better through the flanks and over the hips than Iowana Mercedes Homestead, the Iowa State College bull second in line. The latter is a splendid type of bull, long bodied, with plenty of scale and style, but was unfortunately poorly shown. Wisconsin's entry, Cedar Lawn Canary Paul from Baird Bros.' herd, has the size, a good body, and the best of hips but showed a little too rough over the shoulders and low in the back to displace either of those above him.

The three entries in the three-year-old class included Mayowood Farms' Johanna Glenda Lad, an easy first. He is of somewhat the same type as the aged winner but possesses greater scale, is better over the shoulders, and longer bodied; good enough in fact to defeat the former for senior championship and later win final honors from the junior champion U. S. Korndyke Homestead Segis, the U. S. D. B. yearling calf.

The fifteen aged cows made the best class of the black and white show. They were, in fact, the best class of Holstein cows we have seen this season. The first four were extremely close with Irene Sarcastic De Kol, the Kansas entry, a ringside favorite. She is a cow of wonderfully good type but showed to a slight disadvantage, being due to freshen shortly. In consequence she carried more flesh than the judge apparently favored and he placed her fourth. Doetje Nellie Concordia, owned by Aitken Bros. of Wisconsin and first in the final lineup, is a very good type of dairy cow, especially good when one remembers that she lacks but a month of being 12 years old. Following her in line were Geraldine De Kol Paladin Paul, the Minnesota entry that in color and general conformation make her appear a sister or daughter of Minerva Beets, and Princess Concordia Segis 2d owned by M. Breen and Son of Iowa.

Minnesota showed a wonderfully good four-year-old in De Kol Albin Princess 2d owned by N. P. Hanson, an outstanding winner in a class of 6. Stylish, with plenty of quality and the best of type she was not only outstanding in her class but finally went up as senior and grand champion with the Aitken aged cow, her closest competitor.

Grahamholm Cornucopia Segis Lad, Mayowood's junior yearling, won junior champion for Minnesota over Belle Gem Longfield 2d, Wisconsin's winning senior yearling, Princess Maplecrest Pontiac De Kol, the first prize junior calf from the same state, and Miss Inka Homestead, the Minnesota Holstein Company's winning senior calf.

The state herd class, a new one for the show, brought out four entries, Minnesota, Wisconsin, Kansas, and Iowa, that were lined up in the order named. These four with at least one more will show at the National and it is far from a certainty that they will line up in the same order there.

H. C. Davis of Washington did the judging. Following is a complete list of the awards:

Bull 4 years or over—1, U. S. D. B. on Johanna Bonheur Champion 2d; 2, Iowa State College on Iowana Mercedes Homestead; 3, Baird Bros. no Cedar Lawn Canary Paul; 4, Cass Farm Co. on King Aaggie Hengerveld. Bull 3 years or over—1, Mayowood on Johanna Glenda Lad; 2, Wapsimoor on Sir Wapsie Flossmor; 3, Hetts on King Fan Segis. Bull 2 years, under 3—1, Schroeder on Sir Hengerveld Pietertje Ormsby; 2, Clarinda S. H. on King Pietertje Fayne Ormsby; 3, Mayowood on Ondine Homestead Posie; 4, Lashbrook on Sir Walker Segis Homestead; 5, Stubbs on King Fobes Genista Homestead; 6, Hetts on Juliana De Kol Lyons. Bull 1 year, under 2—1, McCoy on U. S. Korndyke Homestead Segis; 2, Carnation S. F. on Matador Segis Walker Piebe; 3, Iowa State San. on King Pietertje Ormsby Piebe 6th; 4, Wilson and Cotter on King Pietertje Ormsby Piebe; 5, O'Leary on East Troy Sir Ollie. Bull calf 6 mos., under 12—1, Minn. Holstein Co. on Sir Inka Superior Segis; 2, Hargrove and Arnold on King Piebe; 3, Iowana Farms on Iowana Johanna Korndyke; 4, Chestnut on Johanna Bonheur Ella De Kol; 5, Wieffenbach on King Pontiac Parthenea Champion; 6, U. S. D. B. on U. S. Lona Hilldale Skylark Champion. Bull calf under 6 months—1, Mast; 2, Kelley on King Bess Ormsby De Kol; 3 and 4, Hargrove & Arnold on King Pietertje Ormsby Piebe 23d and King Pietertje Ormsby Piebe 18th; 5, Cunningham on Joe Calamo McKinley Pietje.

Cow 5 years or over—1, Aitken Bros. on Doetje Nellie Concordia; 2, Mineral Spgs. S. F. on Geraldine De Kol Paladin Paul; 3, Breen on Princess Concordia Segis 2d; 4, Appleman on Irene Sarcastic De Kol; 5, Minn. Hol. Co. on South Side Inka De Kol. Cow 4 years, under 5—1, Hanson on De Kol Albin Princess 2d; 2, Boeckman on Jessie Tritomia De Kol 4th; 3, Barney on Sadie Cornucopia Eibertje; 4, Miller on Canary Lunde Pontiac Walker; 5, Cass Farm Co. on Almeda Luecke Hengerveld 5th. Cow 3 years, under 4—1, Miller on Canary Lunde Pontiac; 2, Hollyhock Farms on Queen Rag Apple Colantha; 3, Romig; 4, Aitken Bros. on Johanna Ferncliff McKinley; 5, Cass Farm Co. on Pearl Johanna Pontiac De Kol. Heifer 2 years, under 3—1, Stubbs on Delana Mechthilde Fobes; 2 and 3, Miller on Zella Rose Ormsby and Miss Canary Lunde Korndyke; 4, Minn. Hol. Co. on Far Oaks Miss Homestead Rue; 5, Scheming on Jewel Posch Segis. Heifer 18 months, under 2 years—1, Trieloff Bros. on Belle Gem Longfield 2d; 2, Minn. Hol. Co. on Far Oaks Inka Homestead; 3, Marlow & Randall on Mankato Ormsby Pietertje; 4 and 6, U. S. D. B. on Johanna Bonheur Segis De Kol and Johanna Bonheur Juliana Inka; 5, Minn. Hol. Co. on Far Oaks Fannie Homestead. Heifer not in milk, 12 months, under 18—1 and 3, Grahamholm on Grahamholm Cornucopia Segis Lad and Grahamholm Colantha Segis Kaan; 2 and 4, Jefferson Co. Farm on Princess Beauty Calamo and Inka Calamo Beauty; 5, Kansas State College on Canary Paul Inka. Heifer calf 6 months, under 12—1, Minn. Hol. Co. on Miss Inka Homstead; 2, Halback on Alice Hengerveld Bess Ormsby; 3, Mayowood on Ondine Gretchen Colantha; 4, Grosser on Lizzeta Beauty Segis Korndyke 2d; 5, U. S. D. B. Heifer calf under 6 months —1, Holloway on Princess Maplecrest Pontiac De Kol; 2, Halback on Esther Bess Pietertje; 3, Spaulding on Queen Segis Piebe Mercedes; 4, Grahamholm on Grahamholm Pauline; 5, Andris & Son on Ruby Johanna Burke Canary. Cow having official yearly record begun at 5 years or over—1, Minn. Hol. Co. on South Side Inka De Kol; 2, Baird Bros. on Aaggie Nephie Hengerveld; 3, Marlow & Randall on Feronia of Shady Nook. Cow having official yearly record begun at 2 years, under 5—1, Cass Farm Co. on Lulu Baby Girl; 2, Barney & Sons on Sadie Cornucopia Eibertje; 3, Aitken Bros. on Johanna Ferncliff McKinley.

Exhibitor's Herd—1, U. S. D. B.; 2 and 4, Cass Farm Co.; 3, Marlow & Randall. Breeder's Young Herd—1, Minnesota Hol. Co.; 2 and 4, Cass; 3, Marlow & Randall. Calf Herd —1, Minn. Hol. Brown Swiss

Five Brown Swiss herds made the best showing the breed has ever had at Waterloo. Howard C. Barker of Ohio made the placings and found good dairy qualities in every class. His comment was especially favorable on the groups which filled the ring with a representation which was good advertising for the big brown cow. The Hull herd of Ohio furnished an extreme illustration of the hardships show cattle undergo. It arrived late at Waterloo after an eleven-day trip during which they were in a car nine days. They were shown under this handicap.

Vogel's College Boy won his class and the grand champion for the Ohio herd, defeating Bohart's winning two-year-old, Zell A. W., and the leading junior, Howard Carl, owned by Mooney and Larrabee of Iowa.

The aged cow group was one of the best seen. Betty of Lakeview, grand champion of the 1919 National, and shown by A. E. Bower of Ohio, led the class. She was shown dry but well deserved her rating, particularly since Swiss Valley Girl 9th and 7th, in second and third places, showed the effects of their long journey. The winner took the championship in the open and the Advanced Registry contests. The Iowa herd took the junior purple for females with the junior calf, Janette L. 2d.

Seven firsts and two championships went to Hull Bros., six firsts to Bo-

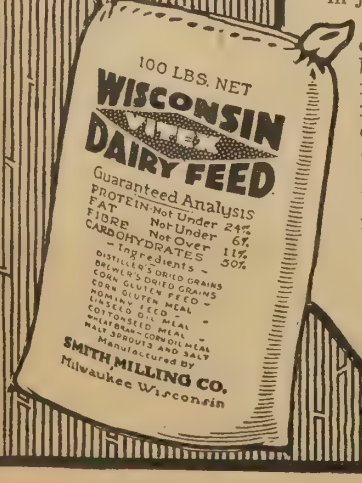
WISCONSIN VITEX DAIRY FEED

4-All is a balanced ration for beef cattle, sheep, hogs and horses. It has made a record for quick gains at low cost.



THESE crisp fall days sharpen the appetites of your cows. They'll eat you out of house and home on a whole grain ration.

You can reduce feeding costs and get a bigger milk yield by feeding Vitex Dairy Feed, the Wisconsin-made mixed feed containing Distiller's Grains, Gluten Feed, Linseed Oil Meal, Cotton Seed Meal, Wheat Bran and other products scientifically mixed in just the right proportion.

Vitex has the right amount of protein, fat, fibre and carbohydrates to make it a correctly balanced ration. It is regularly used on thousands of Wisconsin's successful dairy farms.

Ask your feed dealer for Vitex and 4-All. If he does not handle them, write us.

Factory Whistles *and* Farm Production

How modern machinery is helping to solve the problem

FROM the jumble of strikes, transportation troubles, and political confusion an alarming condition stands out—Industry is draining productive labor from the nation's farms.

The "hired man" has become a rarity in many sections of the country. The factory whistle allures with the promise of high wages and short working hours. Government reports show a farm-labor supply which is only 72.4% normal.

In this grave situation modern machinery offers a partial solution. Reports of the Department of Agriculture show that the scarcity of labor has had the least effect in districts where farming is done by modern machinery. This brings home again—and in a striking way—the advantage and efficiency of tractors.

Yet farmers who use less than scientific lubrication on their tractors are not getting utmost efficiency. They may not realize it, but their fuel consumption is excessive and their oil consumption often is positively extravagant. They are playing with loss of power, frequent breakdowns and quick depreciation.

Scientific lubrication means *engine results.* Gargoyle Mobiloils when used as specified in our Chart of Recommendations have in hundreds of public and private tests affected a fuel economy from 17% to 25% and a saving of oil up to 70%.

To sum up: Scientific tractor lubrication insures full power, reduces breakdowns, and thus assists in the solution of a national problem—Farm Production.

* * *

Gargoyle Mobiloils are put up in 1-gallon and 5-gallon sealed cans, in 15-gallon, 30-gallon, and 55-gallon steel drums, and in wood half-barrels and barrels.

Write for "Correct Lubrication," a book containing complete automobile and tractor charts and other valuable data.

GARGOYLE

Mobiloils

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container.

VACUUM OIL COMPANY, New York, U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

DOMESTIC BRANCHES:	New York	Philadelphia	Detroit	Minneapolis	Kansas City, Kan.
	Boston	Pittsburgh	Chicago	Indianapolis	Des Moines

Chart of Recommendations *for* TRACTORS

(Abbreviated Edition)

How to Read the Chart

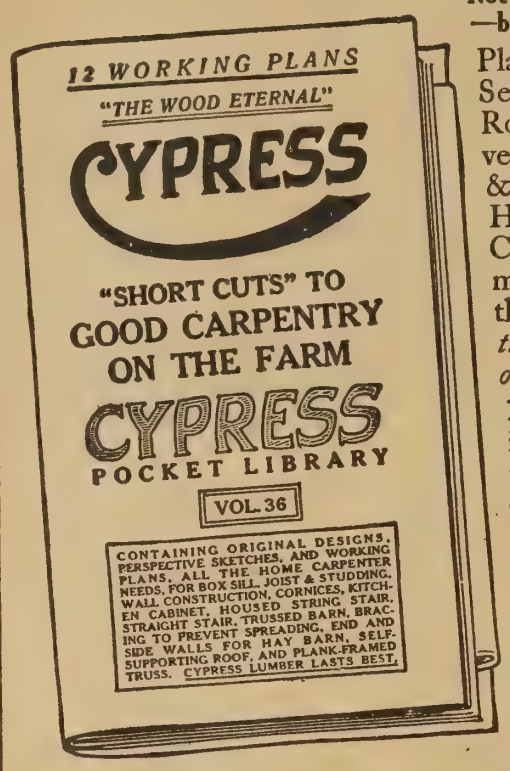
THE correct grades of Gargoyle Mobiloils for tractor engine lubrication are specified in the chart below.

A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
BB means Gargoyle Mobiloil "BB"
Arc means Gargoyle Mobiloil Arctic

These recommendations cover all models of tractors unless otherwise specified.

Where different grades of Gargoyle Mobiloils are recommended for summer and winter use, the winter recommendations should be followed during the entire period when freezing temperatures may be experienced.

This Chart is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and constitutes a scientific guide to Correct Tractor Lubrication.



If your tractor is not listed in this partial chart, consult the chart of Recommendations at your dealer's, or send for booklet, "Correct Lubrication for Tractors," which lists the Correct Grades for all Tractors.

Ear Tags, Bull Staff and Rings. Description and prices sent on application. 300,000 of these ear tags have been sold without adverse criticism. 500 of these BullStaffs are used by the best breeders in the business. H. A. Meyer, Syracuse, N. Y.

The "STAY THERE" Aluminum Ear Markers are the best. Being made of aluminum they are brighter, lighter, stronger and more durable than any other. Fit any part of the ear. Nothing to catch on feed trough or other obstacle. Your name, address and any series of numbers on each tag. Sample tag, catalog and prices mailed free. Ask for them. Address Wilcox & Harvey Mfg. Co., 568 W. Randolph St., Chicago, Ill.

"*LITTLE* THINGS"

That Guarantee Little Trouble and Little Expense

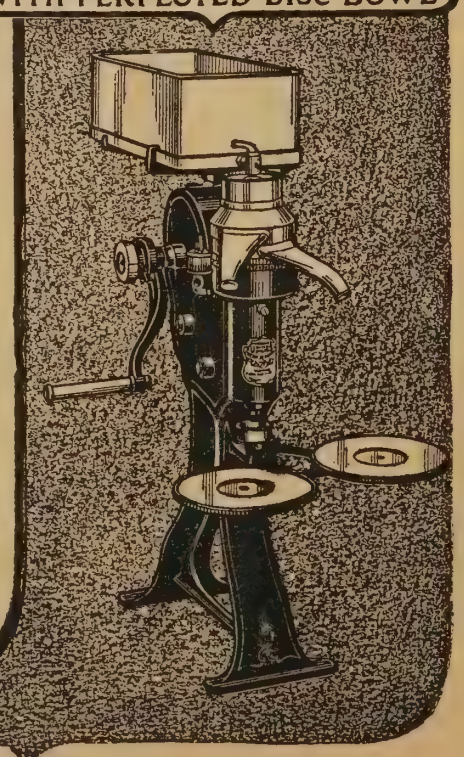
Besides the supreme United States qualities of close skimming, easy turning and easy cleaning—features of which the owner is conscious in every-day use—here are a few of the construction details that stamp the United States Cream Separator as a fine, long-lived, finished mechanism:

One-piece sanitary frame — easy to clean; heavy enough to prevent excessive vibration.

All gears enclosed; no wear from grit and dust.

Automatic oil-splash system — introduced by the United States; imitated by others.

Low and most practical-shaped supply can.



These and many other superiorities guarantee freedom from disappointment and frequent repairs.

Write for catalog and convince yourself that your next separator is to be a United States.

Junior yearling heifer—1, Wallace & Fordyce on Catherine's Dimple Queen; 2, Vander Griend Bros. an Bakerview Bonita; 3, West on Middledale Bernice. Senior heifer calf—1 and 2, Majewski, on Zaro Dallas and Zaro's Diamond; 3, Smith on Fircrest Rosebud. Junior heifer calf—1, Smith on Fircrest Sequel's Pearl.

Junior and grand champion bull—Woodvale Radium. Senior and grand champion female—La France of Fircrest Farm. Junior champion female—Zaro Dallas.

Ayrshires

Exhibitors: Washington State College and E. W. Van Tassell, both of Washington.

Judge: Chesley F. Jenness, Iowa.

There was little competition on Ayrshires, although the presence of Mr. Van Tassell's 19 head furnished entries in most of the classes. His Willowmoor bred Peter Pan 25th had no opposition in the aged bull class, and in two other bull classes the state college had no competition. Mr. Van Tassell fared well in the female classes, and took all the first awards on groups and both grand championships. Everything in the state college display, except the 2-year-old bull, was bred at Pullman. This was also true of the state college Guernseys and Jerseys, and the combined exhibit formed an excellent demonstration of results that can be accomplished by breeding up from small beginnings.

The Ayrshire awards were as follows:

Bull 3 years and over—1, Van Tassell on Willowmoor Peter Pan 25th. Bull 2 years and under 3—1, W. S. C. on Queen's Scottish Cavalier. Senior bull calf—1 and 2, W. S. C. on Chinook Peter Pan Ban and Chinook Cavalier Alf; 3 and 4, Van Tassell on Stewart of Wenatchee and Wenatchee's Robin Hood. Junior bull calf—1, W. S. C. on Chinook Cavalier Caddy.

Cow 4 years or over—1 and 3, Van Tassell on Glengarry's Scottish Queen and Stewart Girl of Wenatchee; 2, W. S. C. on Princess Wilma of State College. Cow 3 years and under 4—1, Van Tassell on Stewart's Robin. Heifer 2 years and under 3—1, W. S. C. on Chinook on Peter Pan Elsie; 2, Van Tassell on Queechie's Choice of Wenatchee. Senior yearling heifer—1 and 2, Van Tassell on Stewart's Girl of Wenatchee 2nd and Lady Bruce of Wenatchee 3rd. Junior yearling heifer—1 and 2, Van Tassell on Lady Scot of Wenatchee and Scottish Queen of Wenatchee. Senior heifer calf—1, W. S. C. on Chinook Cavalier Alice; 2, Van Tassell on Lady Bruce of Wenatchee 4th. Junior heifer calf—1, Van Tassell on Scottish Queen of Wenatchee 2nd.

Championships—Senior and grand champion bull—Willowmoor Peter Pan 25th. Junior champion bull—Chinook Peter Pan Ban. Senior and grand champion female, Glengarry's Scottish Queen. Junior champion female—Chinook Cavalier Alice.

Condensed Milk Manufacturers Closing Factories

Will Cease Operations Until Conditions Improve—Prices Decline with Decrease of Exports

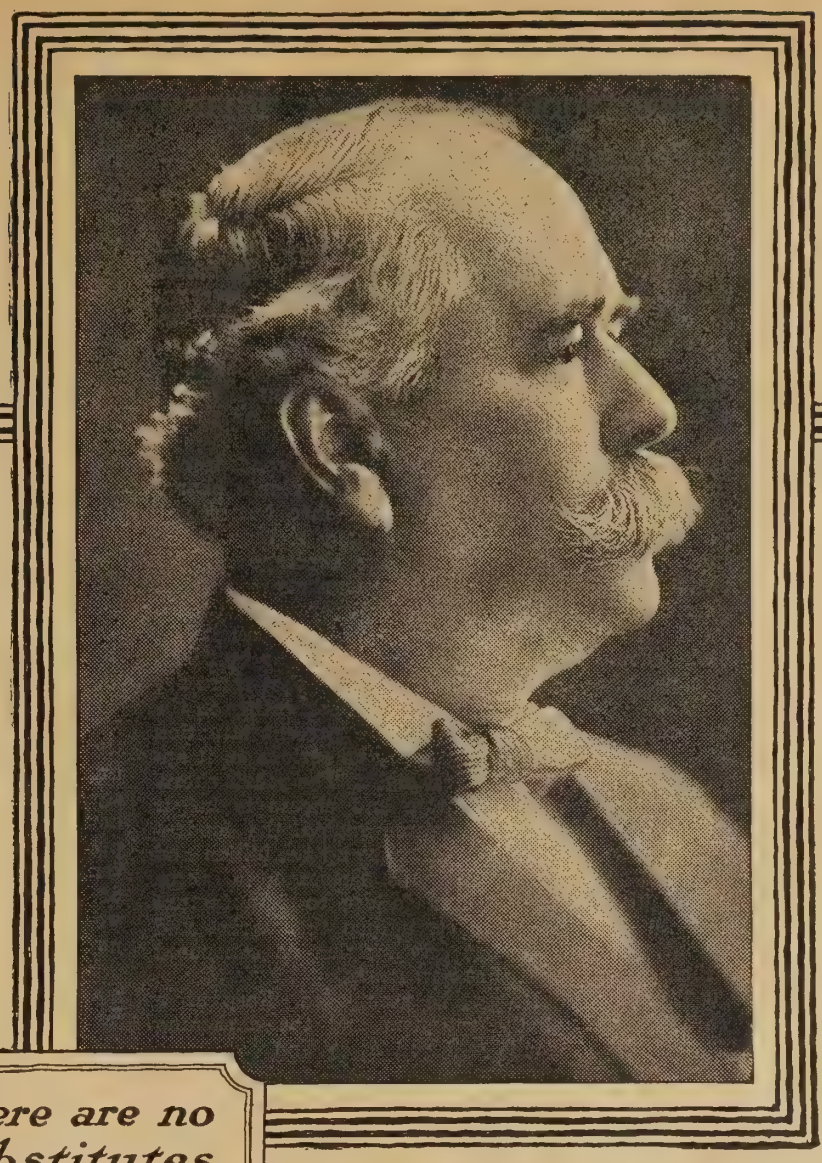
During the past two months the condensed and evaporated milk market has steadily become more demoralized and has now reached a critical stage with many manufacturers.

Export business which stimulated increased production and consequently the building of many new factories during the war is now at a standstill. The domestic market has been flooded with goods offered at cut-rate prices by companies which have been exporting. Foreign demand has decreased partly on account of the increased production of Holland, Norway, and Denmark which is being offered in this and other countries at prices below our own.

Hand-to-Mouth Buying

It is reported that jobbers and wholesale grocers, in expectation of still lower prices, are not taking large stocks and are buying largely for immediate sale to retail trade. The "tight money" condition is said to be a factor with many manufacturers and jobbers, causing them to unload at least a portion of their stocks previously made of high-priced sugar at prices near or below actual cost.

Stocks in the hands of manufacturers on September 1 showed an increase, while unfilled orders had become practically "nil" on bulk goods and less than those of August 1 on case goods. Some firms reported that their stocks were larger than ever before and that the bottom had practically dropped out of the market.



The fact that producers in most sections are contending for higher prices for milk on October 1 presents a serious problem to manufacturers. Some few manufacturers have offered to co-operate with producers by manufacturing stocks and holding them until sold, before determining the prices to be paid the milk producers. Others announce that they will close their factories until the present situation improves. Such action will result in a curtailed supply and will permit present stocks to be disposed of at prices more satisfactory to holders.

Of the 20,500,000 lbs. of condensed milk exported in August, over 10,000,000 went to the United Kingdom, nearly 3,000,000 to Cuba, and nearly 1,500,000 to the Straits Settlements. Of the 5,000,000 lbs. of evaporated exported, France took nearly 2,000,000, the United Kingdom 1,220,000, and Cuba nearly 375,000, and other countries less than 200,000 lbs. each.

Current prices on evaporated case goods range from $5 to $7 per case, and on condensed from $8 to $10.50, with advertised brands bringing the higher prices.

Skim condensed bulk is quoted at $8.75 to $9.50 per hundredweight, and condensed whole milk in bulk at $15 to $16.—U. S. Bureau of Markets.

Emerson has said that the most valuable product of a farm is not crops but character, and that men take out of the earth much more than they put into it.

Dairy Pioneering

IN every great industry you will find some man—some dominant personality—whose thoughts and ideals are so closely identified with it that they become part of the industry itself.

To dairymen and dairy farmers, the name of P. M. Sharples means **Progress.** That is because the improvement of dairying has been the one big thought of P. M. Sharples for nearly forty years.

There are no substitutes for dairy foods

P. M. Sharples

Birth of Made-in-America Separator

Back in 1884, Mr. Sharples undertook to give the American dairyman a more efficient method of separating milk. As a machinist he had set up and repaired the cumbersome, inefficient foreign machines with which the American dairymen were first supplied. The first big task he set for himself was to build a better separator—an all-American machine.

His first Separator won high favor with American dairymen.

Sharples improvements followed, one after another, until all were finally embodied in the Sharples Suction-feed Cream Separator. This machine overcame the wasteful, fixed-feed principle and made uniform clean skimming possible *at any speed.*

Saving Millions of Pounds of Butterfat

Through this machine, Mr. Sharples realized his first dream of Progress. It made possible the saving of millions of pounds of butterfat which was translated into millions of dollars of added prosperity to the dairy industry.

To help other branches of dairying, Mr. Sharples invented the accepted standard machines for the separation of whey and for clarifying and emulsifying milk.

An Organized Interest in Dairying

But machines alone could not express Mr. Sharples' ideas of service to the industry. He gathered around him an organization of men who believed with his own faith in the future of dairying—shared his foresight and vision in connection with its development and multiplied his own energy in giving life to his ideals.

These men have not stopped at selling Sharples machinery and saving money to the dairymen. They have worked hand in hand with the faculties of agricultural colleges, with the officials of experiment stations, with breeding associations, with the National Dairy Council—with every agency, to make the dairying industry better and more powerful.

A Sharples Keynote for Dairymen

It is a Sharples slogan—"There are no substitutes for dairy foods," that has become the rallying cry of dairy farmers throughout the world. It voices the faith of P. M. Sharples. It expresses the belief that makes the Sharples organization a powerful part of every movement for the upbuilding of the industry.

With this confidence as a foundation, the Sharples organization has built the greatest separator business in the world—selling more Sharples separators than are sold of any other make, American or foreign.

Get Acquainted at National Dairy Show

These men of the Sharples organization want to meet other dairymen at the Sharples Exhibit at the National Dairy Show at Chicago. They will be there to give service. They will help any dairyman with the solution of the many problems of the dairy industry.

The Sharples Building in Chicago, 565 West Washington Boulevard, is permanent headquarters for the Middle Western Sharples forces and for any dairyman who can make use of their services. Visitors are welcome any time.

DON'T BE STAMPEDED

Butter and Cheese Shortage Greater Than the Condensed Milk Surplus

CLOSE all condenseries for four months and turn the milk into butter and cheese, yet even then we would not make up the shortage devloped in the production of butter and cheese for the first nine months of this year.

This is a startling statement, and ought to quiet somewhat the alarm over the present situation. Indeed, we view the present milk situation and its possibilities much as a strong, solvent bank fears a money panic and the consequent run on the bank. Lack of confidence spells disaster. Let us keep our heads and be sensibly optimistic. We recognize the seriousness of the present situation as it affects the milk producer, but even he should see the silver lining in the cloud and so sit tight.

The skeptical will want proof of the above assertion. Here it is:

For the first nine months of 1920 there was received at the markets of Chicago, New York, Boston, and Philadelphia, a total of 320,465,376 lbs. of butter and 122,131,582 lbs. of cheese. To manufacture this required 7,951,904,478 lbs. of milk. During the corresponding nine months of 1919 the receipts of these four months totaled 380,944,620 lbs. butter and 143,737,927 lbs. cheese or a milk equivalent of 9,437,216,290 lbs.

These four markets, as compared with last year, are short in their receipts of butter and cheese to the extent of about a billion and a half pounds of milk. It is safe to assume that the shortage of all markets is considerably larger than this, but let us for a moment compare this shortage with the total production of condensed and evaporated milk last year. During the twelve months of 1919 the condenseries and evaporated milk plants used approximately 4½ billion pounds of whole milk, or an average of 1½ billion pounds in four months. This is just the amount of the shortage that has already developed in butter and cheese during the first nine months of this year, as shown above.

So we repeat. If the condenseries and evaporated milk plants should turn all their milk into butter and cheese until February 1, they would only make up the shortage already shown in the four markets mentioned. The factories that have closed estimate that the so-called condensed milk surplus will disappear by January 1, so it would seem that there are several factors of conservatism in the statement that the present situation is not necessarily as serious as it appears at first sight. The year's shortage of butter and cheese is larger than the figures quoted, the condenseries cannot make up the billion and a half pounds shortage in three months, and failure to manufacture ought to strengthen the market and wipe out any surplus of condensed milk that now exists.

Do not be stampeded. Keep up a kindly optimism and the darkening clouds will roll away and expose to view the bright sunlight of hope and prosperity. Other factors may intervene to render the situation less favorable, but the closing of condenseries does not mean that the bottom will drop out of the milk market or that the prices of butter and cheese will recede materially from their last year's average.

Pooling Progress in New York

There is every indication at this writing that the policy of blending the proceeds from the sale of every member's milk into a common pool will be an assured fact. Contracts are pouring into the headquarters of the Dairymen's League by the thousands. Letters and telegrams are coming from every county and every section of League territory, assuring the League that the local branches are either already over the top or soon will be.

County meetings have been held in every county in League territory and with one or two exceptions these county meetings voted unanimously to sign the co-operative association contract, one of the articles of which provides for the pooling of the proceeds of the members' milk. These meetings were followed by local meetings in nearly all of the 1,100 branches in every community of the six states in which the League is operating. Local branch meetings are still being held at this writing. They have been the best attended of any meetings since the dairymen had their first controversy with the dealers in the fall of 1916. The same spirit prevailed. At literally hundreds of them every dairyman signed the co-operative contract and order for pooling. Every individual producer is now being canvassed by local committees of dairymen.

The opposition to this policy of the organization has been exceptionally small, considering the large number of members and has been due in almost every case to a lack of understanding of the true principles in the contract. The almost unanimous support which this policy has received from the farmers shows that every producer, whether his market has been temporarily interrupted or not, realizes the necessity of placing his business on a better co-operative basis.

Dairymen who have been producing milk for the fluid market have been as quick to sign as those whose market is now temporarily interrupted because of the failure of the manufacturers to buy. These men realize that the time is likely to come at any moment when they themselves may be without a market, and they realize also that unless pooling of the proceeds is made effective so that the producers of manufactured milk do not suffer great loss, this milk will be placed on the fluid market and so lower the prices that no one can afford longer to produce milk for any purpose. Unless such a method can be made effective soon, it is certain that thousands of dairy cows will have to be sold for beef, and consumers will later face a great scarcity of and high prices for dairy products.—E. R. EASTMAN, Dairymen's League News.

Farm Bureau and Marketing

Farm Bureau federations of thirteen middle west states have asked the American Farm Bureau Federation to create a national wool selling agency for their state wool pools. This action was taken at a meeting of presidents and secretaries at Manhattan, Kansas, during the latter part of September. These states have wool pools totaling 30 million pounds now in storage.

This further step of co-operative marketing is intended to get the full market price based on world's supply and demand. Growers say that each of the state pools selling separately are competing against each other and buyers have taken the advantage of that by hammering prices. A member from each wool growing state will be added to the present wool committee of the American Farm Bureau, and the wool pools of the western states will be asked to take part.

"No matter what price this wool brings, the principal of wool pooling is economically sound," said J. F. Walker, chairman of the committee. "Farmers have done their own warehousing and grading, and will sell direct to manufacturers. Last year they have profited from 10 to 15 cents a pound over the old way of selling to the country buyer at the front gate. This has not made the consumer pay more but has encouraged production."

Shoddy and Virgin Wool

Mr. Walker said the practice of chopping up old woolens and reworking them into cloth has interfered with the wool market. "Virgin woolens have advanced 250 per cent since 1914 while shoddy has advanced from 400 to 800 per cent. I visited a middle west woolen mill recently where not a pound of virgin wool was being used. This mill sold six-pound blankets made of woolen rags for $18 each, wholesale. These blankets sold in retail in Chicago for $35 to $42. This practice compels the sheep grower to compete with the rag man and gives the consumer a product that will not wear one-fourth as long as virgin wool."

Favor Truth in Fabric Bill

To overcome this trouble the farm bureau federations will favor the "truth in fabric" bill recently introduced into Congress. This bill requires manufacturers to label their goods, stating exactly the amount of shoddy used. The tariff question was discussed and it was brought out that there is a duty of 30 per cent on woolen cloth to protect American manufacturers, but not a cent on unmanufactured wools to protect the wool growers.

Marketing Holds Farmers' Attention

At the Kansas meeting the marketing of dairy products was discussed and a recommendation made to the National Asscciation to call a conference of all organizations. Co-operative marketing seems to hold the center of attention of middle western farmers. At the national grain marketing conference called by the American Farm Bureau Federation in July, a similar conference for live stock marketing was asked for. This conference will be called the fore part of October and all farm organizations will be represented. The fruit and vegetable growers have asked for a national conference which will be held soon.—Illinois Agircultural Association.

FRED KOENIG

The Extension Department of the Holstein-Friesian Association of America has secured the services of Mr. Fred Koenig for its publicity work. Under President Aitken's direction he will supply news to agricultural and dairy publications.

Mr. Koenig has had good experience in agricultural journalism and comes well prepared to take charge of the duties of his new position. He is a graduate of the Iowa State College and has specialized in dairy husbandry.

Coming Events

Oct. 18-22—Wisconsin Junior Live Stock Exposition, Madison, Wis.

Louisiana State Fair, Shreveport, La., October 28 to November 7. W. R. Hirsch, Secretary.

Nov. 9—11, 1920, Wisconsin Buttermakers' Association meets in Madison. Secretary, H. C. Larson, Wisconsin.

Jan. 4—6, 1921, Wisconsin Cheesemakers' Association meets in Milwaukee. Secretary, J. L. Sammis, Madison, Wis.

GRAND CHAMPION BULLS AT THE NEW YORK STATE FAIR

Left to right: Gamboge's Royal Majesty, Jersey sire in the Inderkill Farms, New York, herd; the Ayrshire bull, Auchenbrain Toreador, owned by Middlesex Meadows Farm, Massachusetts; and Pencoyd's Secret Marose, the Guernsey bull owned by U. A. Woodbury II, Vermont.

W. M. KNIGHT, PROPRIETOR

Phone 87

EAGLE WIS.

Sept. 21st, 1920

Milwaukee Air Power Pump Co.,
Milwaukee, Wisconsin.

Gentlemen:

I am glad to say, in answer to your inquiry, that your Milwaukee Air Power Water System which you installed for me four years ago, is operating up to every expectation.

A good water system is important to anybody in the dairy industry, and my cows drink plenty because the System gives water that is always fresh and cool.

I am a "Milwaukee Booster" because the System saves me trouble every day and never causes any trouble itself.

Very truly yours,

W. M. Knight.

House them right, put running water in their barn. Install electric lights. In the early morning and at night you need good light to care for them properly.

Have good, fresh water always ready for them to drink —it means more milk.

Milwaukee Systems provide water *direct from the well*—always fresh, always cool, never stored.

Milwaukee Systems include electric lighting if desired—operated by the same power as the water system.

Milwaukee Systems are simple, economical, efficient—can be installed on a small scale and added to afterward as desired.

Milwaukee Systems are not expensive—they soon pay for themselves by making your farm more valuable and producing greater profits for you.

Milwaukee Systems are easy to install. Every installation is exactly right for each farm, because it is put in under the guidance of an *expert* who knows how to adapt it to any peculiar local conditions. The *Expert's* advice and services are *free*. Get in touch with the Expert near you. Write us for his name and address—today.

MILWAUKEE AIR POWER PUMP COMPANY

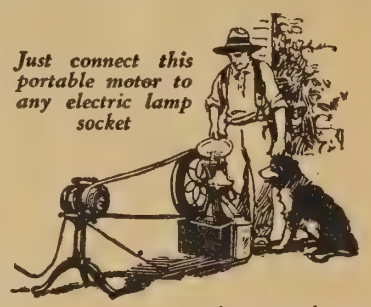
Let us send you the name and address of the Water and Light Expert—our representative—who lives near you. He will help you figure out a practical system for your farm — without charge for his investigations

Could you use 3 hours more a day?

A Western Electric lamp post outside means an up-to-date farmer inside.

"As a rule we farmers don't give much thought to the value of our time. But we suddenly realize that time is worth money, when milking the cows or mixing the feed keeps us from bigger jobs, out in the fields.

"Last year I made up my mind that I would look for a farm plant with power enough to do real work. The one I picked was the Western Electric Power and Light Outfit, and please notice that putting the word Power first in the name describes the outfit very well. It is powerful. But I'm not going to praise it up to the skies. I just want to describe this outfit and the work it is doing for me, and let you judge whether it would suit your needs too.



The battery lasts longer

"It is the 'tapering charge' that makes the Western Electric battery last so long. The charge doesn't strain the batteries, because as they fill, the current gradually slacks up by itself. These batteries are powerful too. They can run my portable motor for hours and hours on a single charge. Or they can operate ten electric lamps for thirteen and a half hours.

"Then there is the generator, built for endurance and hard work. In fact, it will run such a combination as an electric iron, twenty lamps and a one-sixth horsepower motor just as long as you keep it going.

"With the batteries and the generator working together, you just add the capacity of both. That explains how I can use electricity to milk the cows, separate the cream, churn the butter, turn the grindstone and pump water.

Just connect this portable motor to any electric lamp socket

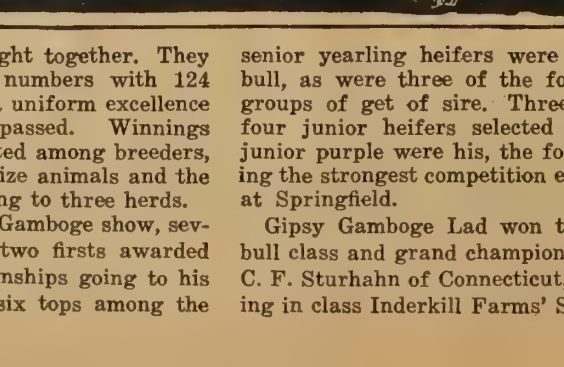
The powerful engine is a big help

"The Western Electric Outfit has an extra size engine, with a pulley all ready to be hitched up to a lot of the machinery I used to turn by hand. So taken all in all, you can see how I save at least three hours a day for work in the field. times when farm-hands are so few and far between, it is mighty important to have this dependable help that my electric power outfit furnishes."

The Western Electric Vacuum Sweeper cleans your house quickly and easily.

A farmhand you can always depend on—Western Electric Power and Light

Western Electric Power & Light



Makes the Battery last longer

How to save time and labor

Booklet H. D. 6 gives some facts and figures on how the Western Electric Power and Light Outfit helps solve the farm labor problem. For your copy write to the Western Electric Company at Chicago, or 195 Broadway, New York.

Some good territory still available for live-wire representative.

Jerseys

Jerseys put up one of the strongest exhibits ever brought together. They ranked second in numbers with 124 head but were of a uniform excellence that was not surpassed. Winnings were well distributed among breeders, six having first prize animals and the championships going to three herds.

It was a Sybil's Gamboge show, seven of the twenty-two firsts awarded and three championships going to his get. Five of the six tops among the senior yearling heifers were by this bull, as were three of the four high groups of get of sire. Three of the four junior heifers selected for the junior purple were his, the four making the strongest competition ever seen at Springfield.

Gipsy Gamboge Lad won the aged bull class and grand championship for C. F. Sturhahn of Connecticut, defeating in class Inderkill Farms' Syracuse grand champion, Gamboge's Royal Majesty. Prospect Farms of New Jersey won the junior purple on Buttercup's Jolly.

Bagot's Crocus, owned By C. F. Sturhahn, a real dairy cow of milking form, won in a splendid class of aged matrons. Her closest contestant was Majesty's Crocus, Belleview Farm's entry shown dry. She has marked excellence but met too many good fresh cows to stand at the top. Four cows headed the three-year-olds, all so worthy of winning that one judge favored the third for first honors. No breed has brought out a closer class of high quality, it being apparent that the winner must be made grand champion. The referee judge favored the strong dairy form of Fauvic's Nic Nac, A. F. Barnes' New York State Fair grand champion, and pleased an intensely interested ringside by putting her in first place. She was followed by Belleview's Bagot's Gamboge Crocus, a daughter of the aged winner. Green Farm Sybil, the $12,000 daughter of Sybil's Gamboge, went to third place.

Each of the younger female classes was a good one. The junior yearling got the purple but lost to the three-year-old for the grand.

F. E. Duffy of Connecticut and Professor E. B. Fitts of Oregon judged with J. C. McNutt as referee judge. Failure to agree on type quickly, as well as the closeness of the classes, prolonged the judging. Judge McNutt was called into many classes, usually agreeing with the Oregon judge's selection of animals of more scale and dairy substance than favored by Mr. Duffy.

The awards by classes were as follows:

Bull 3 years or over—1, Sturhahn on Gipsy Gamboge Lad; 2, Inderkill on Gamboge's Royal Majesty; 3, Westbrook on Golden Noble of Westbrook; 4, Mansfield Hall on Double Finance. Bull 2 years, under 3—1, Sturhahn on Sybil's Gipsy King; 2, Prospect on Hautville's Fontaine; 3, Frelinghuysen on Fern's Noble Oxford Sultan; 4, Barnes on Secret Prince. Senior yearling bull—1, Tenney on Oakland's Cowslip Prince; 2, Westbrook on Westbrook Fontaine Lad; 3, Mansfield Hall on Marjorie's Double Finance. Junior yearling bull—1 and 3, Prospect on Buttercup's Jolly and Prospect's Fairy Boy; 2, Barnes on Fauvic's Western King; 4, Frelinghuysen on Dairylike Fern's Financier; 5, Mansfield Hall on Double Finance's Noble; 6, Westbrook on Gauntlet's Golden Noble. Senior bull calf—1, Sturhahn on Majesty's Broadland's Pride; 2, Prospect on Rustic Majesty; 3, Inderkill on Sybil's Bean's Count; 4, Frelinghuysen on Peerless Golden Fern; 5, Mansfield Hall on Victoria's Noble Oxford; 6, Barnes on Fauvic's Premier. Junior bull calf—1, Prospect on Hamilton Golden Lad; 2, Inderkill on Sybil's Gamboge 2d; 3, Westbrook on Westbrook Fontaine King; 4, Frelinghuysen on Benedictine's Sultan.

Cow 5 years or over—1, Sturhahn on Bagot's Crocus; 2, Belleview on Majesty's Crocus; 3 and 5, Inderkill on Tiddledywink's Stella and Heather Countess; 4, Frelinghuysen no Nesta's Lass; 6, Barnes on Imp. Lilith. Cow 4 years, under 5—1, Belleview on Oxford Majesty's Gipsy 2d; 2 and 6, Barnes on Fauvic Duchess and Chestnut Grove Silver; 3, Sturhahn on Majesty's Gamboge Buttercup; 4, Westbrook on Viola Farceuse; 5, Burnham on Knight's Dorothy. Cow 3 years, under 4—1, Barnes on Fauvic's Nic Nac; 2 and 3, Belleview on Bagot's Gamboge Crocus and Green Farm Sybil; 4, Sturhahn on Zellina's Sybil, Fol.; 5, Inderkill on Imp. Golden Lustre; 6, Prospect on Ivy's Mountain Elf. Heifer 2 years, under 3—1, Belleview on Sybil's Gamboge Katharine; 2, Sturhahn on Sybil's Finance, Fol.; 3, Inderkill on Oxford's Majesty Beauty 2d; 4, Barnes on Combination's Bright Baby; 5, Westbrook on Topaz of Westbrook; 6, Frelinghuysen on Netina's Golden Maid. Senior yearling heifer, not in milk—1, Inderkill on Sociable Sybil; 2 and 3, Belleview on Green Farm Sybil's Sister and Sybil's Gamboge Bounce; 4, Barnes on Fauvic Gipsy Maid; 5, Sturhahn on Sybil's Gamboge Queen; 6, Frelinghuysen on Sea Lass Sybil. Junior yearling heifer, not in milk—1, Belleview on Sybil's Creolo; 2 and 5, Inderkill on Lucinda's Princess Matilda and Miss Warder's Sybil; 3, Sturhahn on Bagot's Gamboge Sybil, Fol.; 4, Barnes on Fauvic Cherry; 6, Prospect on Oxford Majesty's Olivia. Senior heifer calf—1 and 2, Belleview on Sybil's Golden Ceyba and Royal Majesty's Blanchette; 3 and 6, Prospect on Fairy Boy's Oxford Fern and Prospect's Oxford Viola; 4 and 5, Frelinghuysen on Me Cids Sea Lass and Imp. Ruby's Golden Maid. Junior heifer calf over 2 months—1, Prospect on Prospects Fairy Glen; 2, Inderkill on Dairylikes Pretty Princess; 3, Mansfield Hall

The Sewing Machine and the Milking Machine

"Stitch! Stitch! Stitch!
Till the heart is sick and the brain
benumbed as well as the weary hand!"

That was the "Song of the Shirt" before Elias Howe invented the sewing machine.

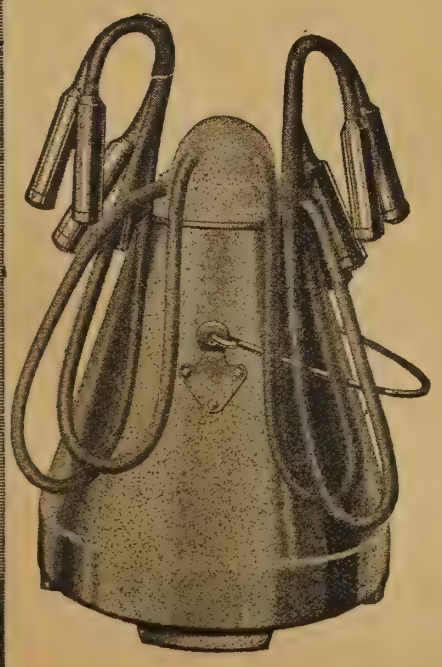
Now the "Song of the Shirt" is sung in an hour or two of easy sewing with a machine.

Today the milking machine is taking the place of hand-milking, releasing hundreds of thousands of men for other work about the farms or enabling them to milk three times the number of cows they formerly were able to milk.

The profit the dairyman derives from the milking machine is not alone in the labor saved or the greater quantity produced. The elimination of the milker's hands in the milking process and the sealed top of the container give him a milk to sell for which he gets a better price. With the milk thus protected from contamination during the milking operation it is necessary only to keep the inside of the machine clean.

Here the choice of a machine equipped with a

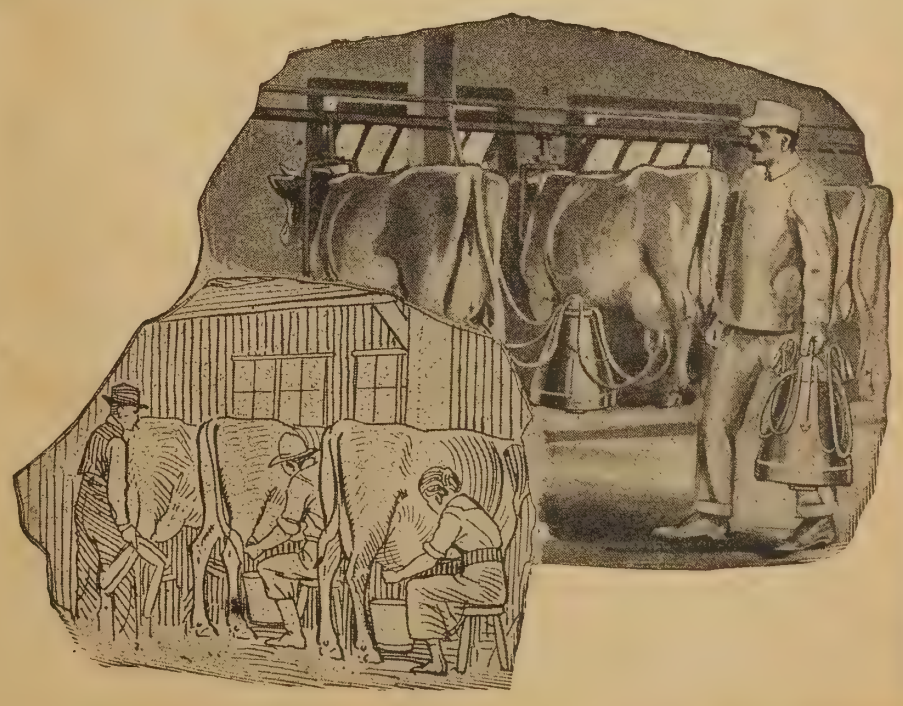
WEAR-EVER ALUMINUM TRADE MARK



"Wear-Ever" Aluminum Milk Pail

WEAR-EVER ALUMINUM TRADE MARK

becomes important. The **"Wear-Ever"** milk pail is easy to keep clean because it is made of solid aluminum and has NO JOINTS OR SEAMS—no cracks in which bacteria can lodge. The **"Wear-Ever"** milk pail is as clean as it looks. It CANNOT RUST. It is light in weight. It will give years and years of service. It is made of the same silver-like metal the housewife knows and likes so well in her aluminum cooking utensils.



The Aluminum Cooking Utensil Co., New Kensington, Pa.

In Canada "Wear-Ever" utensils are made by Northern Aluminum Co., Limited, Toronto, Ontario

The ear for the bail on the "Wear-Ever" Pail is so constructed that the bail cannot possibly fall flat against the side of the pail. As a result the bail is always held about an inch away from the side insuring a quick and easy grip.

The Oregon Milk War

Dealers Win the First Skirmish

E. K. HILL, OREGON

ON the theory that the Oregon Dairymen's Co-operative League has in itself a "power and control that might be exercised injuriously to the public interest and the public good," Circuit Judge John McCourt on September 28 denied the application of the league for a temporary injunction against the Portland milk distributors and the Nestle's Food Products Company, and vacated a restraining order issued last month, prohibiting a campaign against the league.

The league charged in its petition for a temporary restraining order that eleven Portland milk distributors, the Nestle's Food Products Company, Frank S. Glass, representative of the Nestle's Company, A. M. Work, manager of the Portland-Damascus Milk Company and C. M. Gregory representing most of the city distributors, were interfering with the contract rights of the league. The specific charges were that the defendants, by a series of advertisements and by circulation of propaganda, were attempting to persuade members of the league to violate their marketing agreement with the league.

The defendants denied such interference and contended that the marketing agreements were in restraint of trade and therefore contrary to public policy and void.

The dispute dates from the early part of July, when the league announced to the distributors that after July 7 there would be an advance in the price of whole milk of 40 cents a hundred pounds, bringing the market price to $3.60 a hundred. This the distributors objected to and refused to pay.

The decision of Judge McCourt holds that the marketing agreements of the league do not effect a complete restraint of trade, but a partial one, as others in considerable number are engaged in the same trade. In conclusion Judge McCourt stated that in his opinion "the restrictions upon trade provided by the parties to the combination should not be supplemented with the strong arm of equity by the issuance of temporary injunction", although final hearing may prove that the marketing agreement and the combination of which they are a part "are reasonable".

Control of 70 per cent of the milk supply of Portland has been placed in the hands of five men by the agreement, and the entire income from an industry, the investment in which aggregates more than $5,000,000, has been signed over to them with the authority to retain and supply a large part thereof before making returns to the producers.

Under the co-operative organization existing before the present league (organized in June of this year) came into existence, Judge McCourt finds that the producers "stabilized milk prices" and secured for the producer "a fair price which yielded him a reasonable profit and enabled him to continue in the business. It would appear that the result claimed is all that could be desired and that restraint of trade beyond what was necessary to produce that result would be unnecessary and, therefore, unreasonable. The marketing agreement, with its fines and penalties and forfeitures and exclusive marketing privileges over a long period, was not present in the former organization; the result, to which the producers were entitled, was secured without it."

Although the plea was made that the league was organized under and in compliance with the federal statutes dealing directly with co-operative agricultural associations, Judge McCourt held that farmers' organizations are not entitled to any greater privileges than combinations among any other class of people, and continued: "The federal food control statutes are temporary enactments; the powers given by them are not being exercised and they furnish no guide to the public policy of the state. Moreover, as a general rule, federal statutes do not control or influence the determination of the public policy of the state.

"There is a wide field for co-operation in the production and marketing of milk short of a control that oppressively and injuriously affects the public. There is room in that field for activities that will secure for the producer a fair and profitable price for his product and yet not fall under the ban of the law."

It is hinted that the case will be carried to the supreme court.

Washington, D. C., Weekly News

[Special to Hoard's Dairyman]

Washington, Oct. 14—Unable to prevent the milk producers of the Maryland—Virginia Association from putting into effect their price advance Oct. 1, to 44 cents per gallon, justified, so every person connected with that association says, by the shortage of milk and the increasing costs of production in this territory, Health Officer Dr. W. C. Fowler of the District of Columbia has turned his attention to the butter business to stir up the next mess of trouble.

Last week Dr. Fowler served notice on butter dealers in Washington that he had discovered a lot of poor butter in use here in the lunchrooms and restaurants, and that as a result he hereafter would bring prosecutions against any dealer who sold butter containing less than 83 per cent of butterfat. Several of the larger distributors were called into his office and given personal notice to this effect. Remonstrance proved unavailing. Dr. Fowler unearthed a law passed by Congress in 1898, prescribing food standards for the District of Columbia, and read to his astonished hearers a paragraph from that law which specifies in its definition of butter that it shall be deemed to be adulterated if it contains less than 83 per cent of butterfat.

Just what the result of this new crusade will result is a question. Dr. Fowler stated that a single sample of butter does not in his opinion constitute a case sufficient to warrant persecution, but if he finds several samples of butter sold by any dealer that are not up to 83 per cent test, he will certainly enforce the law.

One big butter handler says that any effort to enforce the law will leave Washington without butter, for a time at least, as he does not know where butter measuring up to this test can be purchased. If it can be had at all it will be at an advance in cost from 10 to 16 cents a pound above market prices he says. The net result of this would be to vastly increase the sale of butter substitutes here.

No one interviewed, except Dr. Fowler, ever heard of the 83 per cent law before. However, there is no doubt that the law is on the books, as he states. Just why he should undertake to enforce it when the rest of the world is fairly content with 80 per cent butter, just at this time, after having lived alongside this 83 per cent law as District Health officer ever since it was passed 22 years ago, is the question the butter dealers would like answered.

⚜

Distinguished visitors from Holland are spending several days in Washington in conference with dairy experts of the Department of Agriculture, while on a general study trip to various dairy centers and agricultural institutions. In the party are Professor B. Van der Burg, of the College of Agriculture at Wageninges, Holland; Dr. A. J. Swaving, Acting Chief of the Dairy Division of the Department of Agriculture Industry and Commerce of the Imperial Holland government at The Hague. They were accompanied at the Department of Agriculture by Dr. B. Gratama, commercial attache of the Holland legation. The party was taken to the Beltsville Experimental dairy farm by Chief Rawl of the Dairy Division on Tuesday and were greatly interested in Professor Meigs' work in feeding and in the breeding experiments as well as the other work of the big experiment station.

⚜

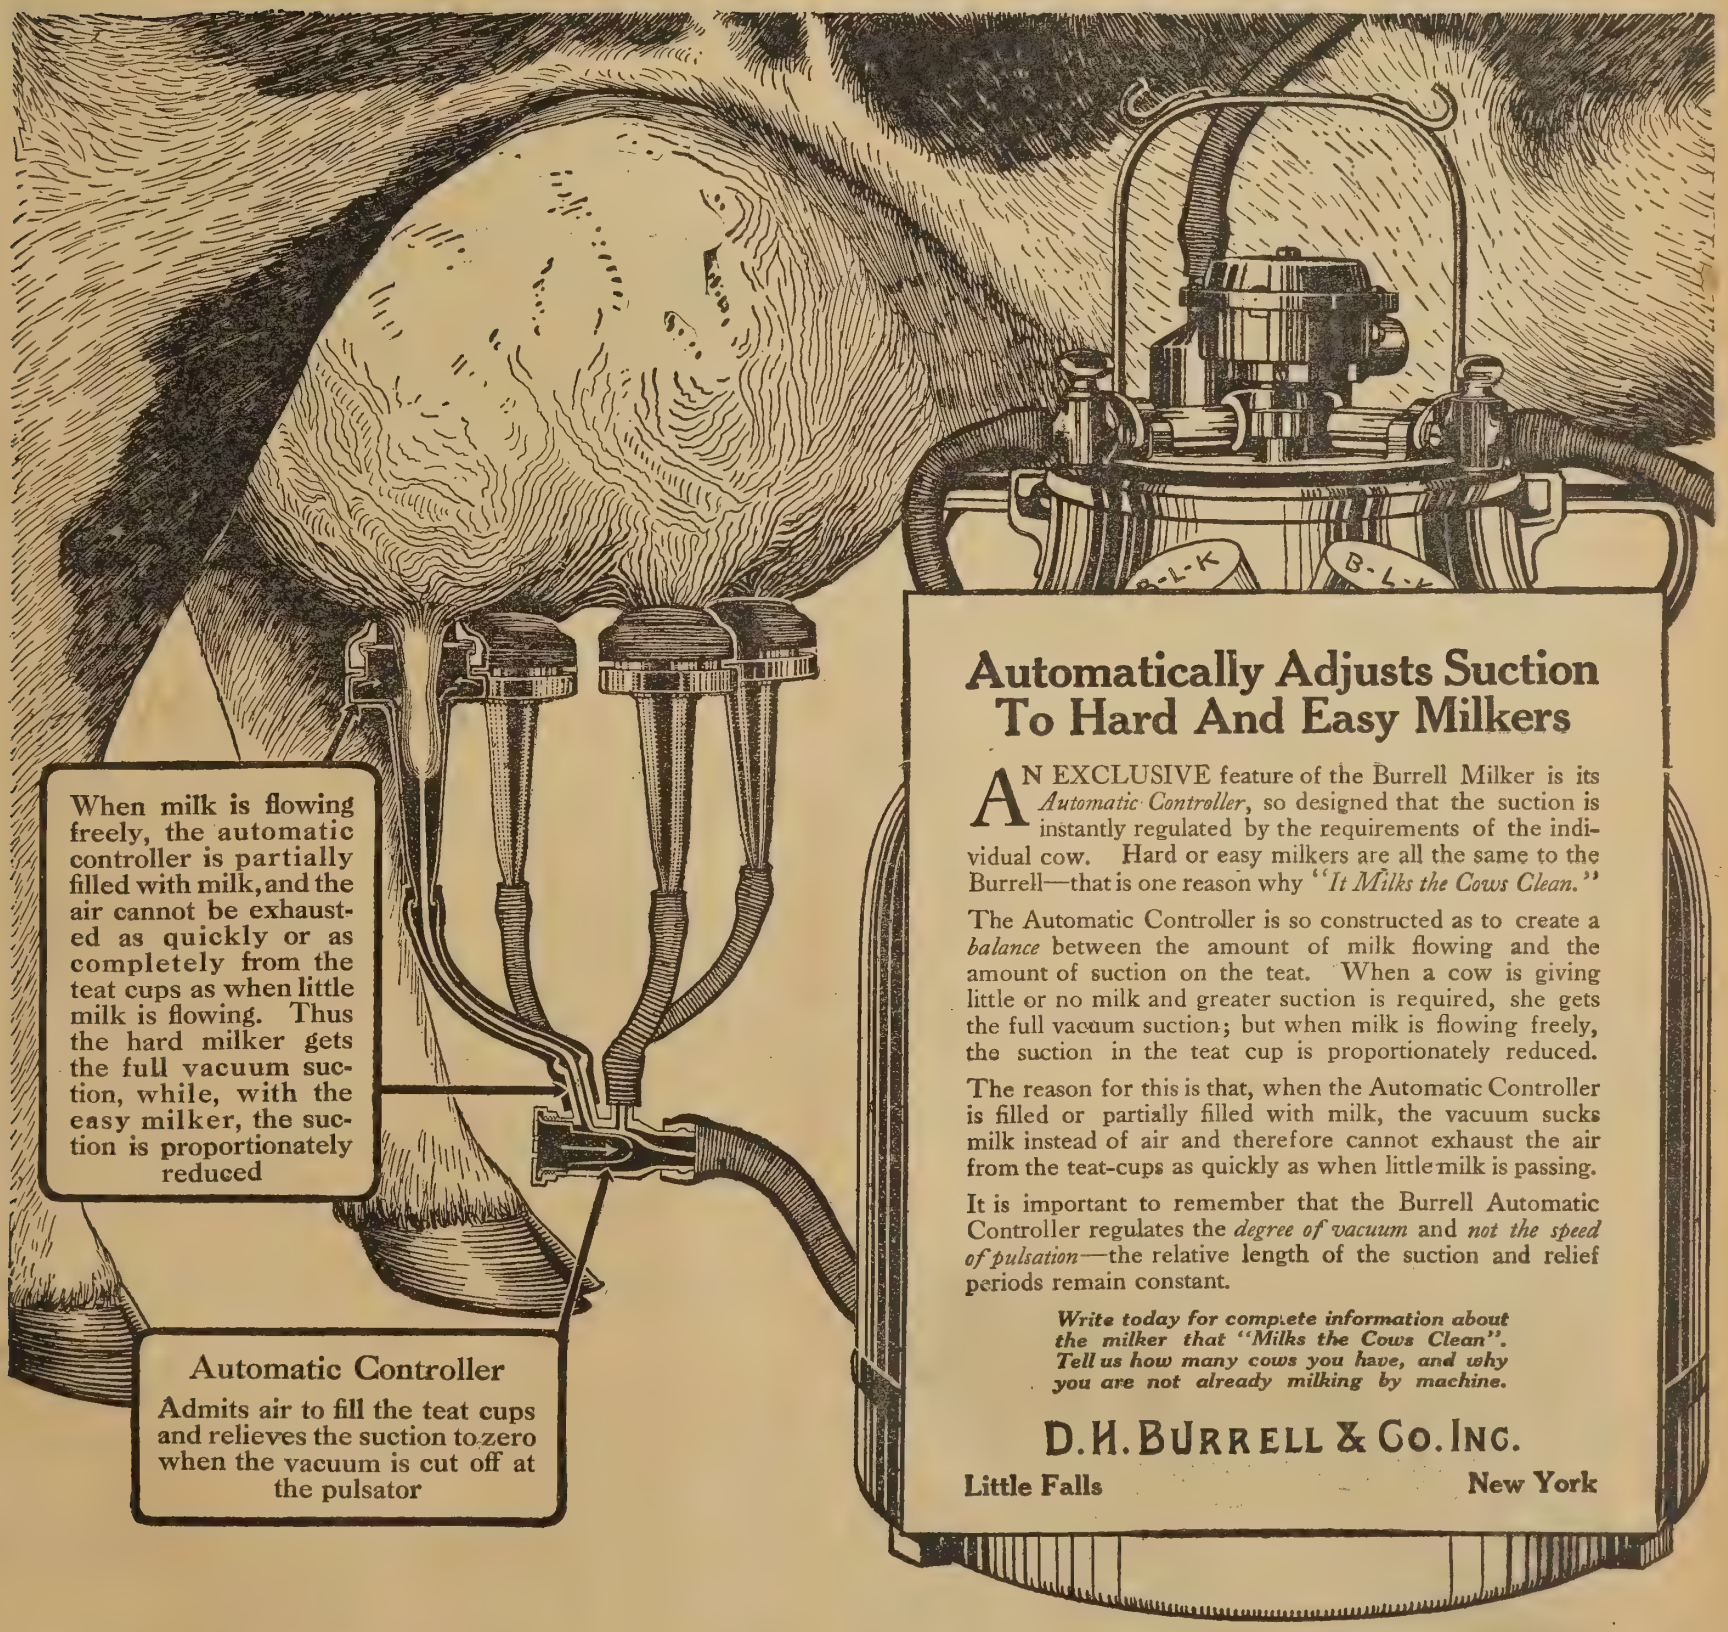
The beginning of a three-times-a-week service, supplemented by a weekly letter of the latest market information, under the title "Marketgrams" is announced by the Bureau of Markets. Nearly 40 publications have already asked for this service, it it stated. Another development of the market news service is noted in a co-operative arrangement perfected this week with a farm bureau in Western New York, whereby the special grape news of the fruit section is asked for by the farm bureau which in turn distributes it to its entire membership each morning. The market news service is one of the growing activities of the department.

⚜

Attorney General Palmer's decision to oppose the so-called Prince plan for the packers' disposition of the stockyards, meets general approval. In a statement to the press, Attorney General Palmer says his plan, if carried out, will of itself constitute a violation of the anti-trust laws. He further criticizes F. H. Prince for previous activities in connection with stockyard ownership and says that any proposal of the kind petitioned for will be undesirable if the F. H. Prince Co. has any connection with it.

The final hearing will be on October 7.

New York Butter Market



NEW YORK CITY, October 5:—While newspaper reports indicate that there is a price slump affecting many commodities, it is very apparent that as yet high quality butter is not affected. Reporters on several of the large New York dailies have been trying, through the columns of their newspapers, to convince their readers that the prevailing high quotation on butter is due to manipulation on the part of butter receivers. They state that the law of supply and demand has been discarded, giving as proof of their statements that enormous quantities of foreign butter are being imported, creating an over-supply. However, regardless of the half-truth of their statements, it remains true that the quotations on high quality butter are due to demand and nothing else. The consumer is alone responsible for the high quotation. He demands nothing but the best, as he has learned to do during the past few years of unprecedented prosperity, and refuses to buy any of the medium to low grades of butter with which the market at the present time abounds. It is very true that Denmark is shipping considerable butter to this country and it is equally true that Argentine is sending greater quantities. While the Danish butter, on the whole, is of good quality, the Argentine butter is of mediocre to poor quality and merely adds to the accumulations of that class of butter that are held in stores and storages in this city.

Butter receipts are very liberal for this season of the year but contain only a small percentage of strictly fancy butter. Buyers are looking for butter containing grass flavors and are as critical as during June and July. Under those conditions it is not surprising that the quotations on extras and higher scoring butter continue to advance. The same conditions obtain in all the large butter markets, which is ample proof that statements of news reporters regarding the manipulation of the market are false. A close study of quotations should convince even the most skeptical that the prevailing quotations are due to natural economic causes. When it is seen that quotations on seconds have declined during the week, while those on fancy butter were advancing, it is quite apparent that the law of supply and demand is still operating.

During the fore part of last week, it was apparent that newspaper agitation was having some effect on the butter market, as from Monday until Thursday the quotations on fancy butter declined 2c. From Monday until Thursday, there was an absolute lack of activity in the market and many dealers felt that a slump could not be avoided. It is undoubtedly true that the slump in part could be attributed to the warm oppressive weather that prevailed at that time. On Friday, with the change of weather conditions, there was a revival of activity and the price on upper grades advanced 1c. That was followed by successive advances of ½c on Saturday, 1c on Monday and 1c today. There is an insufficient supply of fancy butter to satisfy the demand, while dealers are greatly worried over the fact that their supplies of butter scoring under 91 is continually increasing. It is difficult to determine why there should be such an over supply of low scoring butter, but, aside from the fact that Argentine is shipping large quantities of such butter to this country, creameries which invariably make fancy butter during the greater part of the year are now shipping butter of very mediocre quality. Weather conditions are now favorable to high quality production and it is hoped that a greater percentage of high quality butter may soon be forthcoming. Established quotations today are: Extras (92 score), 63½c; higher scoring than extras (93 score or higher), 64@64½c; firsts (90—91 score), 56@62½c; firsts (88—89 score), 50½@54c; and seconds (83—87 score), 47@49c.

W. B. LIVERANCE.

TRADE MARK BURRELL B-L-K MILKER

Automatically Adjusts Suction To Hard And Easy Milkers

AN EXCLUSIVE feature of the Burrell Milker is its *Automatic Controller*, so designed that the suction is instantly regulated by the requirements of the individual cow. Hard or easy milkers are all the same to the Burrell—that is one reason why *"It Milks the Cows Clean."*

The Automatic Controller is so constructed as to create a *balance* between the amount of milk flowing and the amount of suction on the teat. When a cow is giving little or no milk and greater suction is required, she gets the full vacuum suction; but when milk is flowing freely, the suction in the teat cup is proportionately reduced.

The reason for this is that, when the Automatic Controller is filled or partially filled with milk, the vacuum sucks milk instead of air and therefore cannot exhaust the air from the teat-cups as quickly as when little milk is passing.

It is important to remember that the Burrell Automatic Controller regulates the *degree of vacuum* and *not the speed of pulsation*—the relative length of the suction and relief periods remain constant.

Write today for complete information about the milker that "Milks the Cows Clean". Tell us how many cows you have, and why you are not already milking by machine.

Lake County Holstein Sale

Libertyville, Ill., October 18, 1920

65 Choice Holsteins from 19 Different Herds

This is a hand picked lot of cattle, the best that could be selected from 19 of the good herds of Northern Illinois.

Their breeding represents the blood of such famous sires as Sarcastic Lad, Colantha Johanna Lad, Johanna McKinley Segis, K. K. S. V., and King Segis Pontiac.

Every animal is tuberculin tested and sold subject to a 60-90 day retest.

For further information, write or wire

Illinois Holstein-Friesian Association
R. N. Thompson, Field Sec. 130 N. Wells St., Chicago, Ill.

80 Registered Virginia Holsteins

Consigned to the 3rd Annual Sale by Virginia Holstein-Friesian Breeders.

State Fair Grounds, Richmond, Va., October 28th, 1920

Selected only from Herds under State and Federal Supervision.

All animals will be sold with the U. S. B. A. I. Tuberculin Certificate with the usual 60 to 90 days retest privilege.

AMONG OUR OFFERINGS ARE:

A cow that was the first Junior 2-year-old in Virginia to produce 13,000 lbs. of milk. In four years she has produced 48,867 lbs. of milk, containing 2,126 lbs. of butter. She has milked as high as 93 lbs. per day.

A bull calf whose two nearest dams averaged 1,065 lbs. butter, average test of dam over 4%. Ten young cows with A. R. S. O. yearly records. Fifteen cows with A. R. O. seven-day records. A choice bunch of bred 2-year-olds sired by A. R. Bulls and out of high producing dams.

The VIRGINIA HOLSTEIN-FRIESIAN CLUB have spared no pains to make this an outstanding offering in the dependable quality of every animal in it. The Club is proud of the State's position in the number of accredited herds. Virginia has a higher percentage of herds under Federal supervision than any other state.

Write W. L. Kirby, Richmond, Virginia, for Catalogue.

Washington County Holstein Sale

Fair Grounds

West Bend, Wisconsin

November 3d, 1920

60 Registered Holsteins

Individuality has been the first consideration in making selections for this sale.

Washington County, though not conspicuous for holding numerous public sales is nevertheless recognized as one of the oldest and most substantial Holstein communities in Wisconsin.

JOHANNA DE KOL VAN BEERS, the second 40-lb. cow of the breed was bred and raised in Washington County. This year's Senior and Grand Champion Holstein bull at the Wisconsin State Fair was raised and developed in Washington County. Considerable of his blood and that of many other noted sires is represented in the animals to be sold in this sale.

Dairying Thirty Years Ago

Taken From the Issue of Hoard's Dairyman for October 17, 1890

Our thanks are due and are most cordially tendered to the Breeder's Gazette of Chicago, for the use of the cuts used to illustrate and explain the excellent article of T. L. Haecker, of Madison, Wisconsin, in the paper, "The Form of the Jersey". Mr. Haecker is one of our most intelligent breeders of dairy stock and has the happy faculty of conveying much needed information to his brother dairymen. Study these outlines of the form of great performers, whether as sires, dams, or butter-tub fillers. Compare them with your own breeders and see how near the animals you put your trust in for profit come to being fashioned like these great performers. Have them with you when you buy your breeding animals, for you may rest assured there is a similarity of contour in great performers at the churn as well as at the race track.

⚜

We have heard of "shoe-box butter" and have heard John Gould hold up to ridicule the practice of doing up packages of butter in the remnants of worn out garments that had not had the hems and buttonholes cut out; but we always thought John was gassing to raise a laugh. But we take it all back and hereby send him notice that he is "a man of truth and veracity", and if he wants a pennon to raise in corroboration that such things are done, we have the "bunting" ready for him. Mr. Chas. L. Hill, of Rosendale, sent it to us and gives his word —"good as gold'—that he saw it taken from a jar of butter on which it had been used as a covering, and was marketed in that village. It is evidently the bosom and part of a collar of an old shirt and has two good buttonholes, well worked, and a button still intact. We think it safe to say the woman who put that on doesn't take the Dairyman and never heard John Gould denounce the practice of adorning jar butter with old shirt-flaps.

⚜

We call attention to the warning thrown out by Professor Henry in regard to the adulteration of cow foods by an admixture of the oat hulls that come from the oatmeal factories, with other grain foods, and all palmed off under the general head of "mill feed",—the purchaser thinking that because he sees the shuck of the oat, he has the vital substance of it with it, when he is most emphatically "sucked in" about it. Take heed to these faithful warnings and help "spot" those who deserve to be "spotted" as dishonest dealers. As near as we can ascertain from the food tables, oat bran, which is about what the oat hulls are, is worth only about two-thirds as much per ton as wheat bran. It is sold from the factories at about $7 per ton. Of course, when mixed with feed said to be worth a dollar per 100 lbs., it is a swindle of the buyer.

To Improve Wisconsin Cheese

Taking steps to drive from the world market so-called green cheese which is undermining Wisconsin's reputation as a dairy state, the State Division of Markets has issued a drastic order forbidding the 2,750 cheese factories in Wisconsin packing or shipping or delivering or paraffining whole milk American cheese unless it has been out of the press at least three days and is dry.

Due to pressure by buyers to obtain cheese, particularly during the war, and due to efforts of some cheesemakers to crowd into cheese all the water that the product would hold, the market has been clogged with cheese prematurely packed or paraffined, which cheese develops rind rot before it reaches the consumer and often involves a total waste of its food value. This waste is ultimately heaped on the consumer who either pays for the unfit cheese or bears the increased price of good cheese caused by the dealers' loss on the cheese which has deteriorated in transit.

The order makes it criminal not only for cheese factories to ship but also for all buyers from factories to receive any cheese in green condition. It also requires, under penalty of fine or imprisonment, that the cheesemaker or operator stamp upon each cheese the date of removing from the press and the date of packing, together with the cheese factory's number to be issued by the Division of Markets, so that a chain of evidence to attach guilt to the party violating the order may be established.

All persons affected by the order are given until November 1 to comply. This new order follows an order requiring dealers to pay for full weights, instead of on the even pounds as has been done heretofore.

It is just as profitable to remove weed seeds from the woodlot, as it is to weed the garden; besides you can burn the wood from the crooked, defective trees, and from those that are not good timber species.

September Condensery Prices

Prices paid producers for 3.5% milk delivered at factories during September are based on reports made to the U. S. Bureau of Markets by condensed and evaporated milk firms operating approximately 71% of the total factories in the United States.

Geographic sections	No. firms reporting	Price per cwt. Range	Ave.
New England	4	$3.75–$4.02	$3.89
Middle Atlantic	99	2.60– 4.00	3.64
South Atlantic	6	2.60– 3.90	3.20
East North Central	101	2.30– 3.80	3.14
West North Central	5	2.30– 3.00	3.69
South Central			
North Central	19	2.57– 3.73	2.84
South Western	13	2.45– 3.49	2.83
United States	247	2.30– 4.02	3.31

The wholesale prices given below are based on reports made by manufacturers covering actual sales of condensed and evaporated milk delivered to jobbers, wholesale grocers, and similar buyers at manufacturers' distributing points on basis of cash short time credit. Foreign prices are given as f. o. b. or f. a. s. points of export in section in which sales were made:

Geographic sections	Sweetened condensed per case* 14 oz. cans Domestic	Foreign	Unsweetened evaporated per case* 16 oz. cans Domestic	Foreign	Sweetened condensed bulk per cwt. Unskimmed	Skimmed	Unsweetened evaporated bulk per cwt. Unskimmed	Skimmed

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Broadening Out

[Continued]

"If we can keep up with that bird," laughed Bob, "we'll make Chicago in short order, and besides it will help us a lot in finding our way through and out of the city if he goes through."

"How do you know he is headed for Chicago?" asked Jimmy.

"Oh, by the way he is pounding along. He acts just as though he was headed for a place of some importance. Some car he is driving too. This is the supreme test for you, Lizzie."

"Step on her, Bob," urged Jimmy. "There is a bird in back of us doing his best to get by. Don't let him in. If you do others will do the same thing and then we will lose our man."

And Bob did step on her. She shot out almost from underneath his control and before he could cut off some of her speed he found himself running along side of the big Pierce Arrow he had been following. The driver of the big car looked down upon its little running mate and asked if they wanted to go by. "Just as though we could, if he didn't want us to," Bob afterwards commented.

"Oh, no," Bob reddened. "All we want to do is to keep up if you are headed for Chicago. We want to go through and we thought that if we followed you it would make it easier for us."

"All right, sir, young man, follow me and I'll get you right into the heart of the city and show you how to find your way out."

"Thank you," replied both boys in concert, and again dropped in behind the big car. The trip through the city was uneventful, other than requiring all of Bob's attention to keep out of the way of the numerous autos rushing up and down Michigan Avenue. "Just follow this avenue," the driver of the big car had told them. "It will take you out into South Chicago and from there on you can take the Jackson Highway which will lead you into Indiana."

The boys were glad to get out of the big city as quickly as possible, and they soon found themselves spinning through Gary, Indiana. "It's about time we were looking for a place to roost," volunteered Jimmy, "but I'll be jiggered if this place looks good to me; too many niggers and foreign element here, judging from the population on the streets. Must be a manufacturing town, I guess, that's why so many of this kind is attracted here."

"Guess you're right, Jim," added Bob. "It sure is a tough looking place, maybe all right, but I'm not in favor of taking any chances. Let's see, what town do we strike next?" as he reached for the map showing the auto routes through Indiana. "Crown Point. I guess I can make that by seven-thirty. The roads are considered good all through Northern Indiana, so we should make good time."

And this they did, for just as Bob had predicted, they pulled up to the one hotel the city could boast of at seven-twenty. After they had stored the car for the night and had supper and they were comfortably settled in their room, Jimmy remarked, "This is more like it. I feel at home here. None of them things called elevators that shoots you up so fast you can't catch you're breath, and are liable to send you up through the ceiling. Yes, and another good thing," he added in the same breath, "I didn't see none of those guys dressed up in blue uniform with brass buttons to snatch all the dimes that people are foolish enough to give them. They've got plenty of brass without advertising it. The idea," he added in disgust, "I've always carried my own junk around and I guess I can do it on this trip. I'm for making these small towns for our lodging, Bob. What do you say to that?"

"They're all right, but we want to see some of the larger places. It's a good education, Jimmy, to get used to some of that stuff. It's the way of the world, and we've got to recognize the conventions of society whether we want to or not. When we are with the Romans, we must do as they do, at least for a part of the time."

"Well, I'll take the country Romans for mine, fellow," he replied. "They're more of my style."

GETTING INTO THE LAND OF COTTON

"Oh, you'll be thinking differently by the time you have spent a few dimes on hotel porters and dining room waitresses," returned Bob.

"Do you mean to tell me, Bob, that you've got to pay a regular price for your meals and then give the waiters or waitresses something for bringing it to you?"

"Yep, that's the way they do in the cities, Jim," he replied as he tossed himself about on the white covered bed.

"Well, I'll be blamed if any of those waiters get my dimes out of me for carrying my grub, but when it comes to a good looking waitress, one of those red headed ones," he grinned, "well it might be a little different. And I might even go a little stronger than a dime if she was the real quality," he laughed outright at his own boldness upon the subject.

"Time'll tell what you will do," remarked Bob, "but you want to be careful how you conduct yourself, young man, or I'll tell that little girl that you think so much of up there in Madison. And now come on to bed. Tomorrow we want to make a banner run on these good Indiana roads."

"Flat tire," announced Jimmy, as they were looking over the car the next morning ready for the day's run. "Funny thing, put up a car all right the night before and then find this. Looks to me as though some one stuck a pin in that casing, Bob," he whispered, "thinking that we would give them a job of patching the inner. Don't suppose they get much work at places like this anyway."

"They don't get any such jobs from us," Bob whispered back. "We'll just take care of that ourselves. Get out the vulcanizing outfit, Jim, and we'll make that inner as good as new in half an hour."

The tube was soon fixed and the boys were well along on their way before eight o'clock. "We should make LaFayette by noon," said Jim, who was trying his hand at the wheel this morning.

"That's where the Purdue College of Agriculture is located," commented Bob. "Guess we'd better not stop there though only for dinner; we want to get into the South as soon as possible. What's the squeaking noise, as though something was rubbing on one of the wheels?" he asked.

"I've been waiting to hear that," answered Jimmy. "I'll bet it's one of those shock absorbers. I noticed this morning that it was getting pretty low," as he applied the brakes to the car.

"Sure enough, that's the cause," said Bob, as the two were examining it. "They'll have to come off there. We'll make the run, though, as far as LaFayette and then we'll take them off before we get into trouble. I never did think they were of much account anyway."

True to schedule, they reached the city at 12:10 and following a hurried dinner they proceeded with the removal of the rear shock absorbers. It took them about an hour to do the job, and they were well on their way when Bob suddenly discovered that he had left his wrist watch in the wash room of the hotel.

"I wouldn't lose that for anything if I could help it," he said with some uneasiness. "It keeps excellent time and besides Aunt Ella gave it to me last Christmas, and what she would say about being so careless, only I myself know. There's only one thing to do, Jim, and that is to go back and trust to luck that some one found it and left it with the clerk at the desk."

"Do you really mean it?" inquired Jimmy, as though he didn't consider the watch worth the try.

"Of course I mean it, so stop and turn around; we must go back," Bob commanded.

The clerk replied that he had not seen nor heard nothing about such an article. Bob's jaw dropped. "Well, there's one more chance and that is that maybe one of those nigger boys in the wash room picked it up," he said to Jimmy. Hastening to the wash room, he found the two niggers engaged in a game of crap shooting and as Jimmy afterwards laughed, "it was harder to tell which rolled the most, their eyes or the dice."

"Hey there, boy," said Bob to the one nearest him, "did you see anything of a wrist watch that was left on the wash stand here during the noon hour?"

"No, sah, I never did see any such thing round here," he replied.

"Sure you are telling the truth?" said Bob sternly.

"Yes, sah, I sure is," he returned.

Then Bob turned to the other one, who had apparently paid no attention to the conversation. "Well, what about you, Jack?" said Bob. "And be sure that you tell me the truth. Here's one dollar for you if you can produce it," he added, holding up a silver dollar as he spoke.

Then quickly came, "Yes, sah, mistah, I's got that watch all stored away, cause I's knowed you'd come after it."

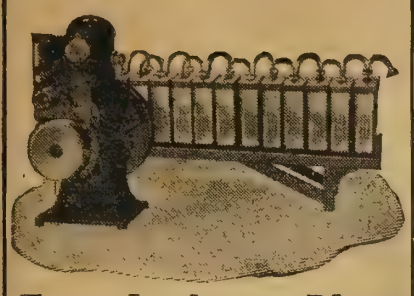
"Well, get it then," commanded Bob," and you'll get your dollar. After an undue amount of time searching for it among a jar of dirty towels, he brought it forth with a grin of satisfaction and handing it over to Bob took the dollar in exchange.

"You are certainly lucky, Bob, and if you hadn't told that black rascal there was a dollar waiting for the one that found it, he would have lied about it and you never would have seen it again," said Jimmy.

"Oh, I knew the only way to get it was to offer a reward," answered Bob. "But I got it back cheap enough, I consider. I should certainly hate to lose that watch."

That night found the boys in Franklin, Indiana, and the next afternoon they had reached Louisville, Ky., where they spent the remainder of the afternoon and evening with a friend, who informed them that the roads leading to Nashville were not in very good condition.

"Why, I thought we travelled the Dixie Highway all the way to Nashville," said Jimmy, "that surely ought to be in good condition. We hear so much about that up in the North as being the leading highway into the South."



"It's too bad that it is the leading highway into the South," answered his friend, "for in parts of Kentucky it is in very bad shape at present."

"Can a Ford make it?" inquired Bob.

"Sure it can, but it won't be very pleasant either riding or driving, and you'll have some loose bolts to tighten by the time you get across the state. You must remember," he added, "that you are now getting into the South and you can't expect as good roads as you have in the North, at least they have never had that reputation. Of course you'll strike some good roads. I don't want to scare you out, fellows," he laughed. "There are hundreds of tourists who are making the South so I guess you can make it. I only want to warn you not to expect too much of us."

"By the way," broke in Jimmy, "when we were ferrying across here to Louisville we met two fellows with a kind of truck auto, rigged up for camping out. They had been down through Kentucky and had intended to go farther south. They had a great

tale of trouble," he laughed. "They declared the roads were impassable and that the dealers actually sold gas with so much water in it that the carburetor had to be drained every half hour or so. They condemned everything most severely, and they even carried a bottle of ether with which to prime the car, claiming that the gas was so poor it would not start the car at all when the motor was cold."

"Well, well," laughed their friend, "you certainly have had a generous introduction to Dixie land, and I hope you will not be quite so hard on us when you tell your friends of your trip. Just let us down kind a easy you know. We're coming, but we've got a long ways to go and we know it too. Some day all of you fellows will want to live down here."

"How many generations away is that time?" slyly inquired Jimmy, bringing a laugh from everyone.

"Can't just tell that," he answered uneasily, "but it's coming, that's the talk down here."

Jimmy couldn't resist the temptation not to take a shot at the opening his remark had left. "Talk's cheap, and it takes money and work to build good highways, so I think that time is at least two generations away. We'll go on tomorrow morning, Bob. We can't afford to sit around here and grow old."

Everyone enjoyed this bit of sarcasm, and Jimmy was convinced that what he had said was only too true as they were travelling over the Dixie Highway the following day.

"Guess dad was right, when he said that we wouldn't have any car left if we took this trip," said Bob, as they plunged from one hole into another.

"You are lucky to be driving this afternoon," commented Jimmy. "You can at least keep yourself from the danger of having your head poked through the top of this thing," he laughed, as he had just safely landed on the seat again. "I'm up in the air most of the time, or at least between the top and the seat. Here is one time when I wish that we could just hit the high places. Hank Ford didn't take these roads into consideration when he planned the model for these short-bodied Lizzies," he gurgled as he started upward again.

Just at this instant Bob brought the car to a sudden stop. "Try your hand at it, Jim; I'm all in, and besides you seem to think that driving is easier than just sitting here."

"Well, I'm not very keen about the job, Bob," he replied, "but I suppose it is only fair that I do my share of the hard work."

"Hurrah, Bob," shouted Jimmy, as he stopped the car and stretched himself. "We're over it at last; there's the Tennessee line. See the sign?" as he pointed toward a big board sign to the left which read, State Line. "Hope that means the end of this highway. Guess it must be that the people of Tennessee don't want the world to think that they own any of these roads we have just left," he smiled, "so they put up this sign to let 'em know just where they begin. Hope these Tennesseeans have something better to show us."

"You know what we thought of the road that passes through Zion City, Jim?"

"Yes, and I haven't forgotten what they were either," he replied. "They weren't quite as bad as these but considering that the Zionites are so religious, makes them seem a lot worse than anything we have passed over today. Why I lost all the religion I ever had, Bob, going through that city," he added, as they started their tour across Tennessee.

[To be continued]

An Open Letter to Exhibitors

In the Junior Live Stock Exposition, Madison, October 18-22

You have made entries for the Junior Live Stock Exposition. I presume your calf, sheep, or pig is in excellent condition for the show, but remember the exposition is a demonstration of boy and girl efficiency—that it is a place where you may learn.

You can learn best by having your entry at the show. If you have failed to bring him to high standard the exposition is the place where you will learn that most effectively and it is the place also where you will learn to correct your mistakes if you have made any. If you have made your animal practically perfect, it will be a place where you can teach other boys and girls how to make theirs perfect.

Above all, it is a place to which you should come because it is your show, organized and carried on to help you develop yourself into the most efficient stockman possible. The object of writing this letter is to encourage you to come even though you may be disappointed in the way your entry has developed. It will be profitable for you.

You have started out to educate and train yourself to be a high class stock man. You will find the Junior Live Stock Exposition a splendid school in which to get instruction and beyond that to get an inspiration that will be immensely valuable to you. Don't be afraid that you will be humiliated if you do not win. The winner of the first prizes will not be the one who will get all the benefits out of the show. Even though you might stand at the foot of the class you will learn as much and perhaps more than the one who holds the first prize winner.

Come and learn—that's the purpose of the show. We want you here with your entry so that you can get out of the experience the benefits that you may enjoy through the opportunities that the show will give you. You will find the other boys and girls congenial, sympathetic, and helpful. The officers of this and affiliated associations are anxious to help you. Come to enjoy yourself and learn all there is to learn, which will be much.

We hope to meet you personally at Madison, October 18—22.

W. L. HOUSER, President,
Wis. Live Stock Breeders' Ass'n.

Junior Letters

Hoard's Dairyman Juniors:—I am eleven years old and in the fifth grade. My teacher's name is Miss Black.

We have fifteen head of cattle. They are grade Holsteins, eleven of which are milking. I have a bull calf three months old. I feed him ten quarts of skimmilk every night and morning. My father has four horses. Their names are Babe, Stub, Bob, and Major. As I will have to feed my calf I will quit.

Wisconsin. Arthur Hanson.

Hoard's Dairyman Juniors:—I have two rabbits and they are Belgian hares. We are milking 20 cows now and sending our milk to Rigley. We will soon begin to use some silage. I have a bicycle and I have a bull calf.

Texas. Lawrence Kelley.

Hoard's Dairyman Juniors:—We live on a 210-acre farm. We have 57 head of cattle. Some of these are pure-breds and others are highly graded.

We have 500 chickens. They are all the Barred Rocks.

I am 8 years old and will be in the 4th grade. My brother is 6 years old and will be in the 2nd grade.

I wish the juniors good luck.

Iowa. Francis Schroeder.

Hoard's Dairyman Juniors:—I am 14 years old. I have been on a farm about two years. I am not the owner of any stock or poultry, but expect to be by next spring. My mother and I have raised between 150 and 200 chickens this year.

My father rents the 160-acre farm upon which we live. My father, oldest brother, and myself do most of the work.

Michigan. Percy Passmore.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

COUPON

HOARD'S DAIRYMAN Juniors,
Fort Atkinson, Wisconsin.

I want to join your Juniors Club. My father's name is _____.

I am _____ years old and like _____ (name breed) cows best. Send me the watch fob, button, and creed and enroll me as a member.

Name _____

P. O. _____ State _____ R.—

Farm Manager—Married, will be available after November 1st to handle dairy farm that can pay about $3,500 and perquisites. Address 3RD FLOOR, 2307 Maryland Ave., Baltimore, Md. 13-2

Milk News From Washington

HOARD'S DAIRYMAN;—Seattle is in the midst of another "Milk War". Producers are demanding an increase from $3.65 per hundred to $4.17 per hundred for milk testing 3.6%. Distributors contend that they have loaded on all the traffic will bear and that another raise to the consumer, which would be necessitated by the increase demanded by producers, will result in a sharp decline in consumption.

A milk strike has been threatened. Charges and counter-charges have been made by both sides to the controversy.

On Monday, September 28th, after a large delegation of producers had called on Mayor Caldwell, explaining their inability to reach an amicable agreement with the distributors, it was decided to place the matter in the hands of a committee. Accordingly, the mayor selected two members of a committee serving last spring to arbitrate a similar dispute, Dr. F. E. Smith, chief dairy, food, and milk inspector of the City of Seattle, and A. R. Priest, chairman of the civic bureau of the chamber of commerce. The third and new member of the committee appointed was Joseph Passonneau, director of farm markets with the Washington State College. Mr. Passonneau is at present engaged in making a survey of Seattle's milk supply and it was believed that his experience in this work and his familiarity with the various factors involved would be of material value in effecting an agreement satisfactory to all parties.

⚜

Under the managership of Mr. Carl Christensen, the Snohomish County Dairymen's Association is successfully operating the condensery at Snohomish which they recently purchased from the Bradner interests of Seattle. At the present time they are processing and canning about 24,000 pounds of milk daily, practically all of which is produced in the Snohomish Valley. Most of the product is being disposed of under the brand formerly used by the King County Dairymen's Association which was acquired by the Snohomish Association shortly after the failure of the latter's condensery enterprise at Tolt, Washington.

⚜

Homer F. Detrick, secretary of the United Dairy Associations of Washington, reports that the seven western counties of the state in which they have been operating now have 60,000 cows signed up.

"Satisfactory progress is being made in our efforts to procure better prices for the producers," he says.

The associations are planning on the construction of a number of farmer-owned and operated plants throughout the western portion of the state. They are now operating one condensery and in a few days will take control of another. They recently purchased the Lynden Creamery in Whatcom County and are now constructing a powdered milk plant and condensery at Burlington in Skagit County.

⚜

The Snohomish County unit of the United Dairy Associations is making preparations to operate the powdered milk plant and condensery at Arlington, construction of which has been completed. Under the terms of the purchase agreement it is to be operated for thirty days by the present owners before the association acquires control. This is one of the several plants to be operated throughout Western Washington by the State Association, through the county units.

⚜

Farmers in the Sequim Prairie district of Clallam County have purchased the Glendale creameries and are now operating plants on the co-operative plan at Dungenesse and Sequim.

Washington. ALTON D. HURLEY.

No accomplishment is impossible when people work together.

The War Is Over!

Changing conditions make it necessary for me to give my entire time to business interests in the West.

My FARM is therefore FOR SALE

Must be Sold and Will be Sold this Month —

Use The "Humane" Lever Stanchion

From 2 to 50 swinging stanchions may be opened and closed with one throw of the lever. One cow or as many as desired may be kept in and the rest let out at the same time.

We Are Prepared To Fill All Orders Immediately

Write for our new catalog showing a complete line of barn equipment.

HUMANE STANCHION WORKS, Baraboo, Wis.

Permanent, fire-resisting farm buildings mark the successful farm. They cut the expense of repairs and painting; protect stock and farm equipment, safeguarding farm owner from loss.

HOLLOW TILE

The Most Economical Form of Permanent Construction

Lasts as long as the farm. The burned clay of Hollow Tile is everlasting; it resists fire and decay. The large units are easy to lay, affording low cost but unexcelled construction.

The air cells in the tile keep out dampness and maintain warmth in winter, coolness in summer. This healthfulness brings a bigger yield from your stock.

Write for booklet, "Hollow Tile for the Farm." Address Dept. 3310

The Healthy Cow, the Hungry Cow is the Business Cow

She's the cow that will convert her feed of grain and fodder into pails of milk.

Remember, the better the appetite, the greater the food consumption, the greater the milk production. Hence, good health, a strong appetite and good digestion are the absolute essentials of a big milker.

Dr. Hess Stock Tonic

Keeps cows healthy. It makes cows hungry.

It contains Nux Vomica, that greatest of all nerve tonics. It whets the appetite, brightens the eye, invigorates the system. It contains Quassia, that bitter Stomachic tonic that produces appetite. It contains Iron that helps to replenish rich red blood, so essential to a cow in milk.

Lastly, but just as important is it—it contains Laxatives and Diuretics that cause the kidneys to filtrate and the bowels to operate regularly, so as to throw off and carry off the waste material. There is no clogging of the system where Dr. Hess Stock Tonic is fed.

Good alike for cattle, horses, hogs and sheep. It keeps animals healthy, the whole herd thrifty. It expels worms. Always condition your cows for calving with a course of Dr. Hess Stock Tonic before freshing.

Dr. Hess Stock Tonic is compounded strictly on scientific lines. You buy it according to the size of your herd. Tell your dealer how many cows you have. He has a package to suit. We guarantee good results in the milk pail.

25 lb. Pail, $2.50 **100 lb. Drum, $8.50**

Except in the far West, South and Canada. Smaller packages in proportion.

DR. HESS & CLARK **Ashland, Ohio**

Ayrshires

Ayrshires led the show. One hundred and fifty head put up the only kind of exhibit a breed can afford to make before business farmers who crowd the ringside of this strong eastern show. The best types of Ayrshire were there—well fitted and well shown. John Cochrane of Pennsylvania judged and made consistent placings in classes which furnished many close ratings.

The aged bulls were a class which drew a large ringside. Auchenbrain Toreador, Middlesex Meadows Farm's Syracuse grand champion, met his first defeat, Foulton Embassador owned by Wendover Farm, New Jersey, leading the class. The two are of different type. The first is a little more upstanding, a little finer, of greater length, and more level rump. He is a finished animal of excellent form. The winner shows in greatly improved condition from last year, being free from excessive covering and clean cut. He has a longer rib and evidences more masculinity, depth of chest, and capacity. The ringside favored the winner. Geo. White's two-year-old, Ringmaster's Brae Burn Diplomat, won his class. Middlesex Meadows' yearling, Southcraig Imperial, beat two good ones, Wendover Embassador and H. P. Hinckley's new herd sire, Bargenoch Predominant. Mr. Cochrane considered the blue ribboner so good that he put him over all other juniors. The aged bull fought his hardest battle in class and was made grand champion.

Nineteen aged cows brought as much merit into the ring as any show in years. The showing was of high worth because of the excellence throughout the group rather than having an exceptional individual or two. Ardyne of Hilltop won for Wendover. She is not flashy but uniformly good. Westburn Royal Rose, from the same herd, was showier, larger, and better bodied but lacked in udder, and another cow or two had excellence in udder but the winner was without serious fault. Lochfergus Ruby, from Woronoake Heights, a cow of very considerable Ayrshire quality, was second. Henderson's Betty, milking 70 lbs. per day, was too much faded from that work and the wear of shipping to repeat her Syracuse winning for Weymouth Farm and went to fifth place. The four-year-olds were not so good; Evamere's Bertha led for Middlesex Meadows among strong three-year-olds; and Wendover won in all the younger female groups excepting that for junior calves in which first money went to Middlesex Meadows. The senior calf, Ambassador's White Heather of Wendover Farm, a winner in a splendid line-up of twenty-one head, was made junior champion, the aged winner taking the grand. The New Jersey herd annexed the blue in all the groups and totalled five of the six purples.

The list of awards follows:

Bull 3 years or over—1, Wendover on Foulton Ambassador; 2, Middlesex Meadows on Auchenbrain Toreador; 3, Woronoake Heights on Strathglass Goldpiece; 4, Monstone on Lessnessock Gems Good Gift; 5, Weymouth on Ryanogue Gwynette's Boy. Bull 2 years, under 3—1, White on Ringmaster's Brae Burn Diplomat; 2 and 3, Hannah on Prince Fissaway of Bonnie Doone and Sir Douglas Haig of Bonnie Doone. Bull 1 year, under 2—1, Middlesex Meadows on Southcraig Imperial; 2 and 5, Wendover on Wendover Ambassador and Wendover Circulation; 3, Hinckley on Bargenoch Predominant; 4, Weymouth on Irene's King of Weymouth; 6, Woronoake Heights on Woronoake Sir Robert 2nd. Senior bull calf—1, Wendover on Ambassador Circulation of Wendover; 2, Weymouth on Elsie's Spectator of Weymouth; 3 and 4, Woronoake Heights on Woronoake Tip and Woronoake Bonnie; 5, Hinckley on Federal Hill Jazz; 6, Middlesex Meadows on Nancy's Chancellor of Middlesex. Junior bull calf—1 and 3, Wendover on Foulton Ambassador 2d and Wendover Ambassador 2d; 2, Weymouth on Weymouth Bircey Bob; 4 and 5, Middlesex Meadows on Nona's Middlesex Chancellor and Middlesex Royal Champion; 6, Woronoake Heights on Woronoake Sir Robert 11th.

Cow 5 years or over—1 and 3 Wendover on Ardyne of Hilltop and Westburn Royal Rose; 2, Woronoake Heights on Lochfergus Ruby; 4, Monstone of Duchrae Jenny; 5, Weymouth on Henderson's Betty; 6, Middlesex Meadows on Maple Leaf Jean. VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Chronic Bloating

Cow is about 12 years old. Last calf about 12 months old. She bloats or swells in left side at night. She has poor appetite and has fallen off in milk. I am giving some hay and some hulls and corn meal and bran. I have given her salts and ground ginger, but no improvement.

Scotland Neck, N. C. G. S. W

Tuberculosis is so often the cause of chronic bloating, such as you describe, that you should at once have the tuberculin test applied by a qualified veterinarian. There is no remedy for the disease. It causes bloating by enlarging the mediastinal lymph glands so that they press upon the gullet and prevent belching of gas. Foreign bodies in the stomach would be another incurable cause of bloating. If you care to try treatment give a dram each of formaldehyde and fluid extract of nux vomica night and morning in a quart of water.

Butter Prices for September

From the daily quotations of the United States Bureau of Markets, we have compiled the following table giving the monthly averages of the daily wholesale prices for September, 1919 and 1920, on 92 score butter (extras) in the four principal markets, together with the total receipts of butter at these markets:

	Av. price		Receipts	
	Sept. 1920	Sept. 1919	Sept. 1920	Sept. 1919
	cents	cents	tubs	tubs
Chicago	56.5	56.9	206,072	17,414
New York	59.13	58.98	198,853	261,999
Boston	59.35	57.94	90,156	69,879
Philadelphia	59.62	59.28	62,641	55,218
			557,722	562,510

Butter receipts during September decreased 22 per cent and the average price per pound increased about 3c. As compared with September, 1919, the receipts were nearly 5,000 tubs less and the average price per pound practically the same or a fraction of a cent higher. The total receipts for the 9 months ending September 3, are 5,086,752 tubs as compared with 6,046,740 tubs during the corresponding period last year or a decreased receipt of over a million tubs.

Ninety score butter averaged 53.24 cents for September on the Chicago market with centralizer butter at this market selling for 53.58 cents. Jobbers' prices on extras sold to retailers during September averaged 57.76 cents in Chicago and 61.76 cents in New York.

Cheese Prices for September

Cheese prices, as well as butter, advanced during September, the increase over August on the Wisconsin Boards amounting to slightly over 1½c per pound but in New York increasing scarcely one-half cent. As compared with a year ago, the September prices are from 2 to 3c lower. For the 9 months ending September 30th, the total receipts at Chicago, New York, Boston, and Philadelphia amount to 122,141,582 lbs. as compared with 143,737,927 lbs. during the corresponding period of 1919. This decrease of 20 million pounds in receipts indicates a healthy condition of the cheese market as does also a decrease of 8 millions in the storage stocks on hand in these four cities.

The daily quotations of the United States Bureau of Markets show the following average quotations on cheese (style, Twins) for three large markets in September, 1920, and 1919:

	Average price	
	cents	cents
Wisconsin boards	26.39	28.27
Chicago	25.78	28.21
New York	27.	30.21

Longhorns averaged 27.64c on the Wisconsin boards for September as compared with 25.82c for August.

Don't decide until you know the Owen

The Owen costs one-third as much to operate as other units. Cheaper per candle-power than kerosene lamps

At last farmers are able to secure the perfected Light and Power. This plant is the Owen. Until the Owen came, farmers had to be content with makeshift units. Crude, too small, expensive to operate.

Still many bought these temporary units. They could no longer content themselves with kerosene lamps and the lack of electric power. Many hesitated, waiting for just such a plant as the Owen.

Now those who have already bought units are replacing them with this final-type plant. Each day we are receiving orders from farmers who have been waiting.

The Owen's success has been instant. It is a new conception. It offers you betterments such as have never been offered by any other plant.

The Owen starts and stops itself. It is completely automatic. No running down to the cellar to turn it on or off. When the batteries are partially discharged, the engine starts automatically. When they are fully charged, it stops automatically. When you require more current than the batteries should care for, the engine starts automatically. Even the lubrication is automatic. Aside from the matchless convenience this automatic control offers, it also multiplies the life of the batteries—overcoming costly replacements formerly necessary.

As a result the Owen costs you but one-third as much to operate as other units. It offers you illumination and power at less per candle-power than kerosene lamps.

OWEN
ELECTRIC
Light & Power
For Farm and Home

The Owen has a "silent valve" engine which cannot leak. Compression remains perfect. Grinding of valves and scraping of carbon are unnecessary.

It will light as high as 100 lamps without flickering. It has more capacity for running a water system, churns, cream separators, washing machines, milking machines, electric fans, irons and toasters.

Dozens of such reasons as this should urge you to know the Owen before you decide. Write for illustrated booklets and complete information.

R. M. Owen & Co

General Sales Office, 1825 South Michigan Ave., Chicago, Ill.

Eleventh Annual Dairy Cattle Congress

(Continued from page 550)

hart, and three firsts and two championships to Mooney and Larrabee and Bower.

The placings by classes follow:

Senior and grand champion bull—Vogel's College Boy. Junior champion bull—Howard Carl. Senior and grand champion cow—Betty of Lakeview. Junior champion cow—Janette L. 2d.

Ayrshires

Adam Seitz of Wisconsin won every class excepting one in which his Ayrshires were entered at Waterloo. Contesting breeders were B. B. Simmons and Sons and Stephen Bull of Wisconsin and C. H. Peverill of Iowa. A total of seventy-eight head were shown; L. S. Gillette of Iowa judging.

Cavalier's Lord Roseberry easily led a class of three aged bulls and defeated Cloverdale's Choice Goods, Peverill's winning two-year-old. The calf classes brought in two good ones for the blue ribbons, Cavalier's Sherry Redman and Cavalier's Ping Pong. The former, the senior calf, was the best male shown and well earned the grand championship awarded him. He excelled the senior champion in lines and finish and is a bull which promises to develop a masculinity and style the older animal does not have.

Imp. Chapmanton Nell 3d won over Imp. Beuchan Lady Lofty, the two being well ahead of their competition. Both were dry but the latter was congested in udder from nearing parturition and was sore as she walked. Chapmanton Nell 3rd was a bit down in the loin but was a popular winner. Cavalier's Silver Actress won the two-year-old class. The calf classes were the best of the females. Beuchan Lady Lofty 2d, out of the second prize aged cow, headed the seniors. In the juniors, Cavalier's Mesalliance defeated her sister, Cavalier's Ella, which has been junior champion at previous shows of the season, once under Judge Gillette. She was selected to compete for grand championship but lost to the aged cow.

The placings by classes follow:

Bull 3 years or over—1, Seitz on Cavalier's Lord Roseberry; 2, Bull on Friendlesshead Victor; 3, Simmons & Sons on Cavalier's Goldfinder. Bull 2 years, under 3—1 and 3, Peverill on Cloverdale's Choice Goods and Cavalier's Fashion Plate; 2, Seitz on Cavaliers Silver Mint. Yearling bull—1, Seitz on Cavalier's Wonder Boy; 2, Peverill on Rosebud Buster; 3, Bull on Garclaugh Ivanhoe. Bull calf 6 months, under 12—1 and 2, Seitz on Cavalier's Sherry Redman and Cavalier's Cupbearer; 3, Simmons on Cavalier's Jerry of Ayrcroft; 4, Bull on Aldebaran Crest. Bull calf under 6 months—1, Seitz on Cavaliers Ping Pong; 2, Bull on Aldebaran Hugh; 3, Peverill on Cavalier's Good Gift; 4, Simmons on White Robin of Ayrcroft.

Cow 5 years or over—1 and 2, Seitz on Chapmanton Nell 3d and Beuchan Lady Lofty; 3 and 5, Peverill on Value's Pride of Oak Valley and Sylva Good Gift; 4, Simmons on Silver Beauty of Bullrush Farm. Cow 4 years, under 5—1, Bull on Craigley Ada; 2, Simmons on Tossie of Pewaukee. Cow 3 years, under 4—1 and 3, Seitz on Barclay's Nightingale and Howie's Glen of Valley View; 2, Peverill on Beauty of Cloverdale. Heifer 2 years, under 3—1 and 2, Seitz on Cavalier's Silver Actress and Cavaliers Silver Queen; 3, Peverill on Rosebud Nellie Carlton; 4, Bull on Aldebaran Ella; 5, Simmons on Cavalier's Nancy of Pewaukee. Heifer 18 months, under 2 years—1, Seitz on Cavalier's Creampot of S. C. 2d; 2, Bull on Violet Finlayston 2d; 3 and 4, Peverill on Rosebud Nellie Carlton and Rosebud Stonehouse Lucy; 5, Simmons on Cavalier's Snowball. Heifer not in milk, 12 months, under 18—1 and 2, Seitz on Netherall Kathleen 2d and Cavalier's Lady Queen; 3, Simmons on Cavalier's Nancy 7th; 4 and 5, Bull on Aldebaran Blossom Again and Aldebaran Delightful. Heifer calf 6 months, under 12—1 and 3, Seitz on Beuchan Lady Lofty 2d and Cavalier's Lila Lee; 2, Simmons on Cavalier's Snowdrop of Ayrcroft; 4, Peverill on Rosebud Fair; 5, Bull on Aldebaran Flirt. Heifer calf under 6 months—1, 2, and 3, Seitz on Cavalier's Mesalliance, Cavalier's Ella, and Cavalier's Lady Bountiful 2d; 4, Peverill on Rosebud Nona; 5, Simmons on Cavalier's Nancy 8th of Ayrcroft. Cow having official yearly record begun at 5 years or over—1, Seitz on Chapmanton Nell 3d; 2, Peverill on Enid Lessnessock. Cow having official record begun at 2 years, under 5—1 and 3, Seitz on Beuchan Lady Lofty and Barclay's Nightingale; 2 and 4, Peverill on Value's Pride of Oak Valley and Lessnessock Carlton.

Exhibitor's Herd—1 and 2, Seitz; 3, Peverill; 4, Bull; 5, Simmons. Breeder's Young Herd—1, Seitz; 2, Peverill; 3, Bull; 4, Simmons. Calf Herd—1, Seitz; 2, Peverill. Get of Sire—1 and 2, Seitz; 3, Peverill; 4, Simmons; 5, Bull. Produce of Cow—1 and 2, Seitz; 3 and 5, Simmons; 4, Peverill. Advanced Registry Cow—1, Peverill. Dairy Herd—1 and 3, Peverill; 2, Simmons.

Senior Champion Bull—Cavalier's Lord Roseberry. Junior and Grand Champion Bull—Cavalier's Sherry Redman. Senior and Grand Champion Cow—Chapmanton Nell 3d. Junior Champion Cow—Cavalier's Mesalliance.

Beet Pulp Supply Larger

Offerings of new crop beet pulp have been on the market in the West since about September 1 and the movement of the new crop from the sugar beet sections of Michigan and other central western states is expected to begin in early October.

The condition of the sugar beet crop, according to the September report issued by the Bureau of Crop Estimates, indicates a crop of 8,929,000 tons as compared with an estimated yield of 6,421,000 tons in 1919.

Each ton of beets produces about 90 pounds of dry beet pulp. Not allowing for wastage or for the amount of wet mash that might be sold to the consumers direct from the mills, the amount of dry beet pulp available will be approximately 400,000 tons, or about 45 per cent more than the supply for 1919.

Imports Augment Domestic Supply

The domestic supply last year was supplemented by importations from Holland and Southern Europe. These importations are expected to continue for some time and will provide a supply until the new domestic crop is available. It is reported that the foreign crop of sugar beets will be from 30 to 35 per cent larger this year than in 1919.

Beet sugar manufacturers usually contract for their beet pulp output with large feed wholesalers or manufacturers who handle the sales and distribution to the dealers and consumers. A considerable part of the output is usually sold early in the season and shipped to the dealers direct from the mills.—U. S. Bureau of Markets.

Neither let mistakes nor wrong directions, of which every man, in his studies and elsewhere, falls into many, discourage you. There is precious instruction to be got by finding we were wrong. Let a man try faithfully, manfully, to be right, he will grow more and more right.—THOMAS CARLYLE.

STEPHEN BULL, - Racine, Wisconsin.

Brown Swiss Cattle Make Good

They are owned largely by farmers rather than by record specialists. Under ordinary farm conditions they establish their superiority as generous and highly economical producers of milk and butterfat.

Farmers find in Brown Swiss cattle size, beauty, quality, hardiness, docility, thriftiness and production combined to suit the most exacting farm standards. Their economy has been demonstrated in mixed herds by the maintenance of milk flow and physical condition beyond that of other breeds in proportion to feed consumed.

A Brown Swiss herd was ranking herd in a Wisconsin Cow Testing Association surpassing the next highest herd, a Holstein herd, by an average of 18 lbs. fat per head.

BETTY OF LAKE VIEW
1st and Champion, National Dairy Show—1919
Grand Champion, Waterloo Dairy Cattle Congress—1920

Most Brown Swiss records are made under Farm conditions. The high record is 19,460 lbs. milk and 798 lbs. fat. 275 cows, all ages, average 11,146.1 lbs. milk, with 444.44 lbs. fat. Average herd milk runs about 4%. Many cows have given over 10,000 lbs. in a year on two milkings a day.

Brown Swiss cattle are always salable at good prices.

Brown Swiss Breeders' Association
Ira Inman, Secretary Beloit, Wisconsin

A good bull is more than half the herd
A scrub bull is mighty near all of it.

Hitch Your Wagon to a Star

Tie Your Herd to the Proven Success of

Ravinia Ayrshires

With a Ravinia Bull and Get the Uplift of This World's Greatest Production Ayrshire Herd

You want more milk, bigger records, better profit.

It's aard to get these things!

Even with the best feed and care you can only do it by putting at the head of your herd a sire in whom great production has been bred and fixed for generations.

This is just what has been done at Willowmoor and Ravinia.

This herd has made more Advanced Registry records and more world's records than any other. You can depend upon a bull from this herd to bring you more milk, bigger records, and better profit.

In order to give two people a definite chance to get this production uplift, we are listing in this issue.

Two Ravinia Bulls

This Exceptional Offering Will Not Be Made Again

Make your choice and telegraph the Martinsville farm to reserve your lot number. Get your order in first for your choice and send check or draft with shipping instructions by first mail.

Ravinia Peter Pan 12th

Sire: Willowmoor Peter Pan 50th.

Dam: Willowmoor Buntie. Record: 12,703 lbs. milk, 481.12 lbs. fat.

A well grown calf; about half and half in color; lots of constitution and a good individual.

This young bull gives you the wonderful show blood of Beuchan Peter Pan and Morton Mains Queechy with the great size and dairy quality of Willowmoor Peter Pan 50th. The blood of Ryanogue Hattie and the show and milk record of the dam, Willowmoor Buntie, finish off an extremely desirable ancestral backing. Price, $650.00.

Martinsville, Ind.

Ravinia Diana's Ben Hur

Sire: Lily's Ben Hur.

Dam: Willowmoor Diana. Record, senior 3, 10,194 lbs. milk, 380.43 lbs. fat.

A good calf, more white than red, straight and a good individual.

This fine future herd sire will bring you the world's record blood of Lily of Willowmoor, of Netherhall Brownie 9th, and of Carston Evelina in the closest possible combination. Every cow in his four generation pedigree has an Advanced Registry record. The average production for every female in his four generation pedigree is 12,361 lbs. milk, 549.81 lbs. fat. He will breed production and profit into your herd. He is a remarkably good buy at $500.00.

Preston, Kan. **Axial, Colo.**

All You Can Ask of a Cow Is Given by the JERSEY

IF you want dairy profits, the Jersey is the cow for you. Her economic production has given her a world-wide reputation. Read "Jersey Facts"—it answers the question, "Which is the Best Dairy Breed?"

If you want rich milk and cream, there is more butterfat and other solids in Jersey milk than in that of any other breed. In the booklet, "Jersey Milk, The Key to Dairy Profits," dairy farmers all over the country describe how Jerseys are making profits for them. Get it.

If you are a working farmer and require cows that "make good," choose Jerseys, the cows for the everyday man. Remember that Plain Mary, Vive La France, Lulu Alphea, all world's champions, were developed on humble farms. Be sure to read "The Story of Plain Mary"—it is filled with romance, yet is just one case in a thousand in which Jerseys have brought prosperity to a farm.

If you are about to buy a bull for use on grades, remember that Jerseys are the world's best bulls. They not only increase butterfat production but also milk production. They improve the dairy conformation of a herd. Send for the booklet, "Better Bulls" and learn why it pays to breed Jerseys.

Get all possible information before you decide on a breed. Send in the coupon for the free booklets. Check off those wanted. Write today.

Sealed bids may be sent executor.
Sale under tent. Lunch served.

The Farmers' State Bank and Trust Company
Executor
Jacksonville, Illinois.

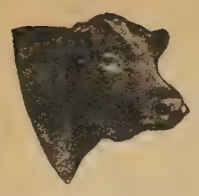
MARA ALVA

75 Head Registered Guernsey Cattle

to be sold at Public Auction

Mara Alva Farms, Smithville, Ohio

Thursday, October 21, 1920



This offering will consist of 25 choice cows in milk or close springers. A fine lot of bred heifers, a few choice bulls and a beautiful collection of yearling heifers most suitable for calf club work.

Many of the cows and heifers are in calf to Wardem Ultra King (27922), Senior Herd Sire at Mara Alva. It will perhaps be sufficient to say that Wardem Ultra King is by a son of the famous NE PLUS ULTRA and out of Queen of May Rose (28326), one of the choicest daughters of May Rose King (8336), making him a bull of superb breeding.

Cows and heifers in calf to this Bull should find ready sale, with those wanting the choicest of foundation stock.

This is Mara Alva's fifth semi-annual sale of registered Guernsey cattle and you are cordially invited to attend.

A. C. Ramseyer, Proprietor
Col. F. W. Andrews & Sons, Auctioneers
Catalogue on request

Economy in Production ← GUERNSEYS → Quality of Products

Twelve years ago a Virginia farmer purchased a few Guernseysey heifers and a Guernsey bull for $1,000. Thirty selected descendants of this foundation have a value today of tens of thousands of dollars. Guernseys and profit are truly synonymous terms. Send for our free literature.

THE AMERICAN GUERNSEY CATTLE CLUB, BOX H 86, PETERBORO, N. H.

Tilden Farms' Guernseys

The Largest Guernsey Herd in Wisconsin

HOPE'S MAY ROSE OF MAPLE HILL 35903

Hopes May Rose of Maple Hill (35903) combines those rare attributes so necessary to a prepotent sire, the ability to sire both individuality and production. His first nine daughters are now on test and as two-year-olds every one of them will exceed the best production of their dams by a comfortable margin. A competent Guernsey judge on reviewing them recently declared that they showed more uniform type of higher standard than any herd header in use in a Guernsey herd of today.

200 Registered Females

About sixty of these are imported animals selected by us on the Island and comprising individuals from the best known Island strains such as the Valentine and Sequel families.

The other females are of our own breeding or selected by us for foundation stock. They are daughters of Sir Rosewood of Linda Vista, a grandson of May Rose King, and other good sires. About fifty of them are Advanced Registry cows with a number of them with records of over 600 pounds of butterfat.

We have a number of SONS OF HOPE'S MAY ROSE OF MAPLE HILL (35903)

out of cows such as these. We are offering them at reasonable prices and they will help to improve your herd.

COME AND SEE THEM

and be convinced of the wonderful prepotency of this sire. We still have about *30 Grade cows for sale.* These are the remainder of our dairy herd of three hundred head which we have disposed of to make room for pure-breds. As we expect to close out all grades this fall, these are priced to sell. If interested, call and see them.

PETER SIMON, ALTURA, MINN.

LANGWATER GUERNSEYS

The following are the figures of the sale of fifty-one head at auction September 21st

LANGWATER WARRIOR AND 4 OF HIS GET

Fifty-One head sold for $146,125—an *average* of $2865.

Twenty-Seven head, where both sire and dam were bred at *Langwater Farms,* sold for $119,525,—an *average* of $4427.

Eleven daughters of *Langwater Warrior* (*26509*) sold for $70,825—an *average* of $6438.

Sixteen animals, get of *Langwater Warrior* (*26509*), including one three-year-old bull, one yearling bull, and three bull calves, sold for $88,525—an *average* of $5,532.

Seven animals sired by *Langwater* bulls out of imported cows, sold for $11,125—an *average* of $1,589.

Seventeen imported animals in calf to *Langwater* bulls sold for $15,475—an *average* of $910.

In addition to this, LANGWATER STEADFAST (31672), sire: LANGWATER ROYAL MASTER, dam: LANGWATER DAIRYMAID, sold at private sale for $25,000. This price is not included in the above averages. Including this price in the average of the twenty-eight animals sired by LANGWATER bulls and out of LANGWATER cows, it would make the average for the home bred animals $5,161.

LANGWATER STEADFAST AND 4 OF HIS GET

LANGWATER GUERNSEYS breed true to type, and set the fashion for the breed. We have several promising bull calves for sale, and there will be an opportunity to purchase others during the coming year. No more females are for sale until they are offered again at public auction.

Forty Production Guernseys

From Two of Waukesha County's Most Noted Guernsey Herds

1920 SHOW RECORD

State Fairs —	Illinois	Wisconsin	Minnesota	So. Dakota
Grand Champions	1	1	1	2
Champions	1	2	2	4
1st Prizes	4	9	11	11
2d Prizes	6	4	2	6
3d Prizes	4	4	4	3

105 prizes won at four leading state fairs

Breeding and Production

The fact that these forty head of animals represent only select stock from the Jones & McKerrow herds and that there is not a blemish nor inferior animal in the sale should mean much to the prospective buyer looking for something choice. Proof that these are production bred Guernseys is found in the records of the animals themselves and their immediate ancestors. That they possess correct blood lines is seen in the study of the pedigrees of the great herd sires used in the Jones & McKerrow herds; and that they are unexcelled in individuality is shown by their 1920 show record.

Mildred II of Les Godaines A. R. (4111), grand champion cow, 1920, Illinois, Wisconsin, Minnesota state fairs, has a record of fat 702 lbs., milk, 14890 lbs., and is the dam of one A. R. cow.

Silver Glen of Home (60755) on A. R. test in class B. B. has made 286 days fat 593 lbs., milk 12,807 lbs. Will finish with over 700 lbs. fat making her a class leader.

Kate of Aurelian Farms, fat 473 lbs. in class G. First prize three-year-old cow at Illinois and Wisconsin state fairs.

80% of the herd are A. R. animals or are from A. R. dams.

70% of the females of milking age have creditable A. R. records or are making a good showing on test.

There are 19 mature cows and nearly all of them are heavy in calf to Ultra King of Edgemoor (42532), a son of a 614-lb. four-year-old daughter of Ne Plus Ultra and Yeksa's Tops of Gold's Boy, a son of the sixth leading cow of the breed and the present Wisconsin champion butter cow, having a record of 981 lbs. fat.

12 sons and daughters of Ultra King of Edgemoor out of high record dams or dams now on test.

Few, if any, sales in America have sold more outstanding prize winning and high producing animals than will be offered in Jones & McKerrow's Quality Sales.

All animals will have a Federal test and will be sold on a sixty-day retest guarantee.

For Catalogue, address

W. E. Watkins, Sec., Libertyville, Illinois

Only 40 minutes from Chicago. Good train service on C. M.& St. P. and North Shore Electric R. R. via Lake Bluff

os..octon County Poultry Culled

Twenty-two poultry culling demonstrations were held recently in Coshocton County, Ohio, with an average attendance of 59 per demonstration, making a total attendance of 1,298. Of these 1,298 persons, 400 pledged to cull their flocks, totaling 29,008 birds. But this was not all, as 100 community leaders were present at these demonstrations and went back to their communities and taught the people of their communities how to cull their flocks. The reports from these community poultry men and women are not yet due, but from indications and reports of progress it would seem that at least three-quarters of the 128,000 fowls in Coshocton County will be culled, or that is 96,000 fowls would be culled. If 40% of these fowls or 38,400 of them were eliminated, as each cull wastes about $2.00 worth of feed according to Department Statistics, this would make a savings in feed to the poultrymen of Coshocton County of $76,800.

G. C. MUSGROVE, County Agent.

HOLSTEINS

Walcowis Farms

—offer young sons of—

Iowana Sir Ollie

—and—

Sir Ollie Mooie Ormsby

Most all of them from yearly record dams. They combine TYPE with PRODUCTION. Write for pedigrees, etc. Herd under Federal supervision.

Walcowis Farms, Lake Geneva, Wis.

MILLAR FARM

HOME OF

King Pietertje Ormsby Piebe 16th. Records of dam and sire's dam average 1351.52 lbs. butter in one year.

He is the $15,000 calf purchased at the National to breed on the daughters of Finderne Netherland Korndyke, son of former Champion Jr. 2-year-old; Finderne Pontiac Netherlands.

A few sons of the latter bull and out of A. R. O. cows still left for sale.

Better write or come and see us.

WM. MILLAR, JR., MENOMONIE, WIS.

5-10 WELL BRED HEIFERS

SEVERAL GOOD YOUNG BULLS

are what we are offering just now. The heifers are registered two-year-olds, bred to freshen this fall. The bulls, old enough for fall service, are from A. R. O. dams and by Sir Ormsby Homestead Butter Boy, a 35-lb. bull. One is by a 42-lb. grandson of S. P. O. M. Come and see them.

ANDREW FRANK, FOX LAKE, WIS.

Cedar Lawn Farms

Headed by

General Ormsby Colantha

Both grandams of this young bull made above 1,235 lbs. butter in 1 yr. 6 dams made above 30 lbs. butter in 7 days. 5 dams above 33 lbs. butter in 7 days. 7 nearest dams average 30.19 lbs. butter in 7 days. 15 nearest dams average 27.44 lbs. butter in 7 days. He is a direct lescendant of Miss Korndyke Maid Ormsby, Bess Pietertje Ormsby Mercedes, Spring Brook Bess Burke, Colantha 4th's Johanna and Pietertje Maid Ormsby. Sons of this bull out of A. R. O. dams up to 30 lbs. for sale.

C. A. Schroeder & Son, West Bend, Wis.

WILLOWPINE FARM

has for sale a few exceptionally good young bulls who combine both type and breeding. They are from heavy producing dams and sired by Canary Inka Fobes Oak, whose dam is a 25-lb. cow and whose sire is from a 30-lb. dam who is a full sister to a 34-lb. cow. Don't miss this opportunity of getting a good bull at a reasonable price.

H. B. Kellicut, R-2, Westby, Wisconsin

Grandsons of Sir Pietertje Ormsby Mercedes

Sired by Sir Pietertje Ormsby Korndyke, a Sir Piet. Bess Burke bull.

Dams are line bred Johanna cows with A. R. O. and cow testing records.

The calves are straight, growthy individuals and are six months old.

For pedigrees and prices write to

H. A. Brace and Sons, Lone Rock, Wis.

Catalogs Ready at Sale Time

Sir Bess Ormsby Fobes

Is Arriving With His Illustrious Sire and Grandsire

"Bess" was recently sold to Hollyhock Farms for $25,000. He is undoubtedly one of the best individual 3-year-olds in the country. His sons and daughters now arriving in our herds give promise that he will soon be in the king row with his sire, S. P. O. M. 37th and his grandsire, S. P. O. M.

His dam, Wisconsin Fobes (1,153 lbs. butter in a year—4 A. R. O. daughters) is one of Wisconsin's greatest foundation cows.

We still have a very few of those good sons of "Bess" from heavy producing dams for sale. One or two are ready for service.

SPRING BROOK FARM COMPANY

OFFERS—Very choice grandsons of Sir P. O. M. and King of the Pontiacs.
Herd under State and Federal Supervision.

S. L. De Smidt, Manager. - - - - - Burnett, Wisconsin.

A Son of King Bess

from an A. R. O. granddaughter of Colantha Johanna Champion will suit you for a herd sire

Here's one from Johanna Rutena 3d, a 23-lb. junior 3-year-old that is one of the best long time prospects we have. Her dam, a daughter of Champion, has 30.37 lbs. as a 4-year-old and is now going at better than a 1,000-lb. rate on year test.

King Bess is from a 33-lb., 1,235-lb. daughter of S. P. O. M., so that in the 5 generation pedigree of this calf, every dam has over 22 lbs., 10 have over 30 lbs. in 7 days, 7 have year records, 4 above 1,200 lbs. and 5 over 1,000 lbs.

The calf is a dandy, straight, four-fifths white and well grown. He was born March 8.

Write or wire today about him.

Dispersion and Consignment Sale

Sheboygan, Wis., October 23, 1920

60 Registered Holsteins

Including the Complete Dispersion of the Model Stock and Dairy Herd, and that of Silbernagel, together with a splendid Consignment from the Lake Park Farm Herd

KING ABBEKERK PONTIAC SEGIS 3D
Sired by the highest record son of "Count" and from the highest record daughter of Piebe Laura Ollie Homestead King. Nine females in the sale bred to him.

The Model Stock and Dairy Herd

25 head — all of them descended from 2 foundation cows. This herd has been established for 14 years, and none but very good sires have been used. Every animal of milking age has a cow testing association record, many of them being leaders in the local association.

King Segis Concordia Cora, a 4-year-old son of King Segis Concordia Hengerveld is included in the herd as are his daughters.

Silbernagel Herd

22 head, all but the herd bull being descended from a single foundation cow that is still in the herd. In this herd, too, every animal has a C. T. A. record, one of them heading the association list last year. Several members of this herd have produced from 10,000 to 12,000 lbs. milk in 6 months under ordinary herd care. His herd sire, Cleveland Segis Pontiac Prince, a 3-year-old, is out of a 26.27-lb. daughter of King Segis Pontiac Veeman. She is now on year test and will finish with over 900 lbs. as a 4-year-old.

His sire, King Veeman Pontiac Alcartra, a 30-lb. bull, is also the sire of a 26-lb. junior 2-year-old now going at a 900-lb. clip.

Cleveland Segis Pontiac Prince will be sold.

Lake Park Farm Consignment

10 females — 5 of them A. R. O. cows — 5 young heifers from A. R. O. dams and by Cleveland King Segis Pontiac, he from a 29-lb. junior 3-year-old daughter of Wase Korndyke Segis, the best proven son of Johanna McKinley Segis. The cows' records run from 12.5 lbs. as a junior 2-year-old to 23.5 lbs. at full age. All but one of the 10 females are in calf to King Abbekerk Pontiac Segis 3d, he by the highest record son of "Count" from the highest record daughter of Piebe Laura Ollie Homestead King.

5 bulls All sons of King Veeman Pontiac Alcartra, whose daughters are making splendid records. All are out of A. R. O. dams, 2 of them now on year test and going at a 1,000-lb. clip.

The sale will be held at Whippermann Bros'. Lake Park Farm 2 miles south of Haven and 4 miles north of Sheboygan. Free transportation from both depots to the farm.

Every animal over 6 months old will be tuberculin tested.

For catalogs write

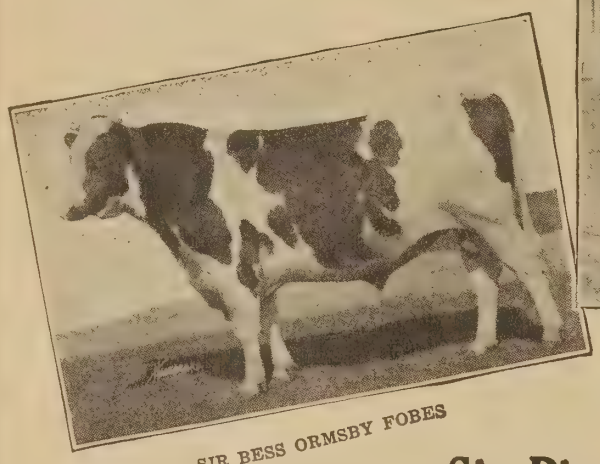
Both sired by Sir Ormsby Beauty Pontiac Segis, his sire the youngest son of Pietertje Maid Ormsby and his dam, Beauty Girl Pontiac Segis, the world record heifer with 1112 lbs. butter from 24,924 lbs. milk as a 3-year-old.

No. 1—Born Sept. 5, '19; ¾ white, very well grown, from a 17-lb. junior 2-year-old that has a good 305-day record and is by a 34-lb. sire. Price $500.

No. 2—Born Dec. '19; ¾ white, a good individual, from a 22.5-lb. junior 4-year-old now going strong for the year. Her dam an 808-lb. 3-year-old. Price $500.

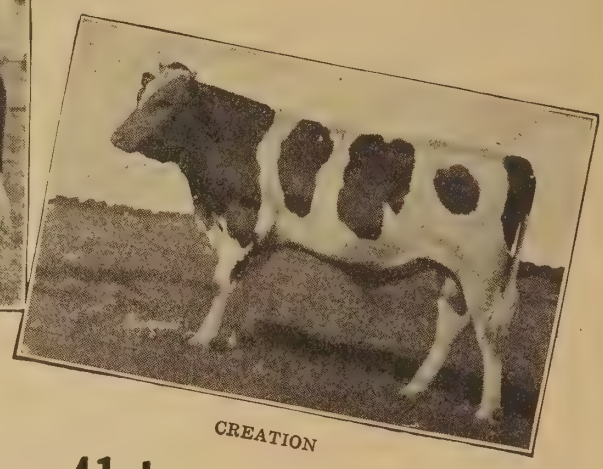


Both tuberculin tested and guaranteed right.

Pinehurst Farms Co., Sheboygan Falls, Wis.

Hollyhock Farms' Holsteins

Sires in Service



A Son and Two Grandsons of Sir Pietertje Ormsby Mercedes

SIR BESS ORMSBY FOBES

SIR PIETERTJE ORMSBY MERCEDES 41ST

CREATION

Sir Pietertje Ormsby Mercedes 41st

We selected "41st", the $65,000 bull, for our senior sire because we believed he represented the best breeding to be obtained anywhere. His sire, Sir Pietertje Ormsby Mercedes, is unquestionably the greatest sire of long distance producers the breed has produced as well as being a sire of show ring winners.

His dam, Spring Brook Bess Burke is known everywhere as the greatest of foundation females. She has produced 34.81 lbs. butter in 7 days, 1,094 lbs. in a year and has 5 A. R. O. daughters, 3 above 30 lbs. and 3 above 1,100 lbs.

MARY SEGIS BEETS

31.82 lbs. butter, 533.6 lbs. milk in 7 days. Now on year test and going strong.

Sir Bess Ormsby Fobes

This is, we believe, the best individual son of his great sire, S. P. O. M. 37th, he, a son of S. P. O. M. and Spring Brook Bess Burke 2d. "Fobes'" dam is Wisconsin Fobes, a really great foundation cow with 1,153 lbs. butter in a year and 4 A. R. O. daughters including a 29.78-lb. 2-year-old.

PABST KORNDYKE CORNFLOWER

38.43-lb. 3-year-old with 151.71 lbs. in 30 days (world record). 1,002.46 lbs. butter, 22,656.3 lbs. milk in a year as a jr. 2-year-old (state record). The highest priced Holstein female ever sold at public sale.

Creation

Creation is a son of Creator, full brother to S. P. O. M. 37th, and is from Champion Dora Korndyke (1,315 lbs. butter in a year) the highest yearly record daughter of King Pontiac Champion. Thus Creation and "Fobes" are the logical junior sires to follow "41st", the 3 representing what is, we believe, the best combination of long distance breeding that could be obtained.

BONNY JOHANNA MOORE DE KOL

29.64 lbs. butter, 518.9 lbs. milk in 7 days; 694.42 lbs. butter, 18,124.8 lbs. milk in 305 days.

Our Breeding Herd

In selecting the foundation animals for our breeding herd we kept in mind two essentials at all times: — type and production. We have, of course, combined good breeding with these, but the first two were always essential. Some of these females had very good records at the time; since then all have had or are having a splendid opportunity to prove their productiveness and we are more than pleased with the records they have made.

Cows like Queen Colantha Posch, Pabst Korndyke Cornflower and the others shown here are representative of the foundation stock we have selected.

QUEEN COLANTHA POSCH

32.08 lbs. butter, 590 lbs. milk in 7 days. 1,183.57 lbs. butter, 27,725.4 lbs. milk in 1 year at 9 yrs., 11 mos.

We Have For Sale

Some splendid young bulls of serviceable age and younger, most of them sons of King Pontiac Artis Sadie Vale, a 34-lb. son of King Korndyke Sadie Vale. They include a son of Mary Segis Beets and others as good.

We also have a very few young sons of "41st" for sale.

Watch for Them at the National

Sons and Daughters of King Pietertje Ormsby Piebe

— one of the greatest of long distance sires living.

They won in both the open and group classes at the Dairy Cattle Congress and will be very strong contenders at the National.

We hope you will look them up and notice particularly the strong and very similar dairy type they all possess.

King Pietertje Ormsby Piebe is a real transmitting sire and one of his sons at the head of your herd will transmit those same excellent qualities to his offspring.

Let us tell you about the one or two we have for sale.

Hargrove & Arnold, Norwalk, Iowa

Maxwell Farms' Holsteins

Have Removed to

Hollywood, California

We invite you to call and see us there

You will find at the Head of Our Herd
TRITOMIA PIETERTJE ORMSBY

He is a son of the great Sir Pietertje Ormsby Mercedes. His dam, Alice Tritomia Ormsby, 34.43 lbs. butter in 7 days, 1,100 lbs. in a year is a granddaughter of the same famous sire.

MAJOR PIETERTJE ORMSBY

"Major", too, is a son of Sir Pietertje Ormsby Mercedes and is from Bess Mercedes Korndyke, a granddaughter of that wonderful cow, Spring Brook Bess Burke 2d. Bess Mercedes Korndyke made 818 lbs. butter in 305 days and dropped 3 calves during the year of her record.

OUR BREEDING HERD

includes a large number of daughters of **Sir Ormsby Skylark,** the foundation sire of the Maxwell herd and the fountain head of the Ormsbys' as well as daughters of King Segis Pontiac and Woodcrest Hengerveld De Kol.

We Still Have a few corking good young bulls for sale and they are priced right because of our removal to California.

Stock the Farm With Purebred Holstein Cattle

In spite of the increasing cost of feed, dairying offers you a better opening today than it ever has in the past.

The scales and the Babcock test have systematized the industry until it is no more uncertain than any other business. Even city business men are awakening to its opportunities. Every year it becomes clearer that with large-yield cows, the cost of milk and butter production can be brought down to a point that makes dairying profitable. Have you ever figured out what your farm would be worth to you, if stocked with purebred Holsteins?

Send for Free Illustrated Booklets.

The Holstein-Friesian Association
101 Hudson Street, Brattleboro, Vermont.

YOUR CHOICE OF 30 YOUNG BULLS OUT OF YEARLY RECORD COWS

FROM AN ACCREDITED HERD—325 FEMALES

OUR HERD SIRES

KING OF THE ORMSBYS

KING OF THE ORMSBYS is sired by Sir Pietertje Ormsby Mercedes (twelve 1000-lb. daughters) and out of Spring Brook Bess Burke 2d, the world's largest dairy cow and the only cow in the World with three 7-day records above 35 lbs. butter in connection with three year records each above 1000 lbs. Her best records are 38.22 lbs. in 7 days and 1290.93 lbs. in a year.

SIR INKA PRILLY SEGIS is a 30-lb. son of King Segis. He has 84 young daughters at Winterthur; 30 have freshened and 10 of these made above 20 lbs. at first freshening. At their second freshening they are coming back with from 25 to 28 lbs. 17 of his daughters have completed semi-official records, and 12 of these averaged 757.73 lbs. butter and 19,172.30 lbs. milk at an average age of 3 y. 6 m.

SIR INKA PRILLY SEGIS

KING OF THE SADIE VALES is sired by King Korndyke Sadie Vale (the only bull with a 40-lb. dam, a 40-lb. sister, and a 40-lb. daughter) and out of a 38-lb. "Sadie Vale" cow. Both his sire and dam are out of 41-lb. cows. The five nearest dams of King of the Sadie Vale each weighed over a ton and produced over 100 lbs. of milk a day. His three nearest dams average 40.19 lbs. butter in 7 days and 159.51 lbs. in 30 days.

JOHANNA KING SEGIS is out of a 40-lb. cow and sired by a yearly record son of King Segis. The dam of Johanna King Segis was the first cow to make 541 lbs. butter in 120 days and the second to make 40 lbs. in 7 days. Johanna King Segis now has 8 daughters with semi-official records and these average over 700 lbs. butter and 18,000 lbs. milk. All his daughters born at Winterthur will be given an opportunity to make semi-official records.

Dispersion Sale of Holsteins

Lexington, Mo., October 20th, 1920

15 Pure-breds — 35 Grades

Consisting of fine Herd Bull, Mature Cows, Heifers and Calves

Owing to time required for his professional duties Dr. F. W. Caldwell, County Agent of Lafayette Co., Mo., will disperse his entire herd of Holstein cattle.

A few years ago Dr. Caldwell selected cows of some of the best families of the breed as the foundation of a herd. He then went to the famous herd of the Kansas Agr. College for a herd bull. He, of the Josephine, Pontiac and Homestead families. It is these cows and their offspring he is offering in this sale.

The following are some of the pure-breds:

Josephine Pontiac Homestead No. 169951, 5-year-old herd bull; 3-year-old Bairdland Pontiac Johanna, granddaughter of Pontiac Champion; 3-year-old Occidental Duchess Segis 5-year-old Miss Woodcrest Savannah Beauty; 5-year-old Juliana Pietertje Wayne; 5-year-old Occidental Viola Homestead; 7-year-old Darlyne Hengerveld Tirania; 5-year-old Johanna Katydid De Kol. Bull calves: Josephine Hengerveld Homestead, Josephine Pontiac Pietertje, and De Kol Johanna Josephine. Heifers: Josephine Duchess Segis, Josephine Pietertje Wayne and two heifers out of Bairdland Pontiac Johanna. Certificates of registry and transfer will be furnished with all pure-bred cattle.

The Grades

Consist of fifteen milking cows and twenty yearling and two-year-old heifers. Good indivduals, well marked and in calf to the herd bull in most instances.

As this is a small sale it is not possible to advertise it extensively. Hence there will be a good opportunity for bargains.

A Josephine Herd Bull

is at the head of this herd. He has good lines, is two-thirds white and sires calves of good individuality and is gentle. Get him at your price.

Sale Starts at 10 A. M. in Pavilion

Lexington is forty miles east of Kansas City on the C. and A. and Mo. Pac. R. R's. All cattle will be tuberculin tested within thirty days of the sale. The usual ninety-day retest will be granted.

King Oak Segis Pontiac

***Sired by* Count**

***From* Piebe Fayne Dam**

We do not claim

that King Oak Segis Pontiac is the greatest sire in the world or the most perfect, nor did we listen to such claims when we went out to buy him. But, in looking over his pedigree, we found a few things which caused us to put our faith in King Oak.

He is the son of King Segis Pontiac Count — "The Marvel of All Sires" — who is the sire of eight daughters who have year records of over 1,000 lbs. of butter. His daughters have broken far more than one hundred world records. He is also the sire of a 21,000-pound three-year-old. He is the youngest sire in the world having 8 daughters with year records of over 1,000 pounds of butter. His two and three-year-old daughters have made more 100-lb. records than those of any other sire.

King Oak Segis Pontiac's dam, a daughter of Oak De Kol Ollie Homestead, has a three-year-old record of 23.59 and 512.8 lbs. of milk in seven days, made on a three-quarter udder under adverse circumstances. Her dam was a daughter of Sir Johanna Fayne, one of the greatest sires of the breed. Her dam was from Wisconsin Piebe Laura, one of the greatest foundation cows known and now holding the world's record for her age.

This pedigree record looked good enough to us so that we had faith. We went to "Arden Farms" and viewed King Oak Segis Pontiac. When we saw what a remarkable individual he was, our faith was strengthened. We took him to Oak Dale Farms and at the appearance of his first calves, we saw that he was backing up our judgment. Our faith became conviction.

So convinced are we of the final outcome of the combination and blood that King Oak carries, mingled with the blood of our foundation dams, that we do not hesitate to ask our friends and fellow breeders to come to Oak Dale Farms and buy breeding that cannot be duplicated.

Your Future Herd Sire !

Have You Ever Realized Why I Bought King Korndyke Pontiac Lass to Use on the World's Champion Daughters of King Segis Pontiac Count ?

It was because after fifteen years' experience I have come to the firm conviction that *Line Breeding* is bound to secure the best results and that the greatest sires and cows of the Holstein-Friesian breed can be found in the pedigrees of *King Segis Pontiac Count* and *King Korndyke Pontiac Lass*

I Make This Statement Advisedly and Without Fear of Contradiction

At the Second Foundation Breeders' Sale

Minnesota State Fair Grounds, October 28 and 29

I Will Sell One of the Best Bred Calves Ever Raised on Arden Farms

SIR VEEMAN SEGIS PONTIAC KORNDYKE H. B. (292572)
Born January 11th, 1920.

His dam: MOLLY VEEMAN SEGIS PONTIAC, one of the greatest daughters of KING SEGIS PONTIAC COUNT, with this wonderful record:

At 2 years, 4 months, 4 days:		At 5 years, 3 months, 13 days:	
Butter, 7 days	28.61 lbs.	Butter, 7 days	32.48 lbs.
Milk, 7 days	502. lbs.	Milk, 7 days	608.6 lbs.
Butter, 30 days	107.45 lbs.	Butter, 30 days	119.27 lbs.
Milk, 30 days	1,836.2 lbs.	Milk, 30 days	2,789.4 lbs.

She is now on yearly test and in 200 days, has to her credit: butter, 614 lbs.; milk 15,863 lbs.

I think she will go over the 1,000-lb. mark. I shall run her again as a six-year-old. If she had no other record than the one made as a two-year-old, this calf would be worthy of the place of your future herd sire.

His sire's dam: — K. P. PONTIAC LASS has the following record:

Butter, 7 days	44.18 lbs.	Milk, 60 days	4576.40 lbs.
Milk, 7 days	585.90 lbs.	Butter, 90 days	426.68 lbs.
Butter, 30 days	171.50 lbs.	Milk, 90 days	6866.40 lbs.
Milk, 30 days	2361.40 lbs.	Butter, 100 days	465.16 lbs.
Butter, 60 days	308.81 lbs.	Milk, 100 days	7601.50 lbs.

ALL WORLD'S RECORDS WHEN MADE—WONDERFUL TYPE AND PRODUCTION

In a five generation pedigree of this bull there are more great sires and cows of the breed than I have ever seen in any other pedigree

I will have nothing to say about the price—that will be up to you

We Can't Raise Any Better on Arden Farms

J. M. Hackney, 602 Merchants Bank Bldg., St. Paul, Minnesota

The Blood of PIETERTJE MAID ORMSBY, greatest transmitting cow of the breed — whose son was again first and whose grandson was second among the money winning sires of the past year — whose great granddaughter was first and whose granddaughter was second among the prize winning females — the blood of this great cow is strong in the animals we have consigned to the

National Dairymen's Holstein Sale

October 13 and 14 — During the National Dairy Show — Coliseum, Chicago

KING ORMSBY COLANTHA DE KOL

Sire:—*King Korndyke Colantha Ormsby.* His breeding is given with that of King Bess. His daughters are making exceptionally large records in all divisions. His granddaughters are typical *Ormsbys* and remarkably uniform.

Dam:—*Miss Ormsby Grace De Kol,* a 31-lb. daughter of *Sir Ormsby Hengerveld De Kol* and a ¾ sister to *Pietertje Maid Ormsby.* She is a cow of great size, smooth finish and all quality. Now on yearly test.

Here is a bull that carries the best of *Ormsby* breeding, an outstanding individual and ready for light service.

BESS JOHANNA RUBERTA 2D

Sire:—*King Bess,* who is by our *King Korndyke Colantha Ormsby* (two nearest dams average 1,250 lbs.; his grandams are *Pietertje Maid Ormsby* and *Colantha 4th's Johanna*). His dam is *Bess Pietertje Ormsby Mercedes,* 1,235-lb. daughter of *Sir Pietertje Ormsby Mercdes* and *Spring Brook Bess Burke. Four nearest dams average 1,207 lbs. for the year.*

Dam:—20-lb. 3-yr.-old daughter of *Sir P. O. M. 38th* and out of a 22-lb. granddaughter of *Colantha 4th's Johanna.*

A stronger *Ormsby-Bess Burke-Johanna* pedigree would be hard to imagine. World's records close up and plentiful on both sides.

DUCHESS COLANTHA ORMSBY 2D

Sire:—*Sir Ormsby Akkrummer Hengerveld,* whose three nearest dams average over 34 lbs. for 7 days and 1,100 lbs. for the year. His get were second this year at the California State Fair. Our junior sire and one of the most richly bred of the *Ormsby* bulls.

Dam:—A daughter of *King Korndyke Colantha Ormsby* and *Oakhurst Duchess Clothilde,* the dam of *Duchess Skylark Ormsby.*

As a foundation *Ormsby,* it would be difficult to improve on this royally bred heifer.

Woodlake & Clover Farms

The Home of the Ormsbys

John B. Irwin - Minneapolis

To the

Second Foundation Breeders' Sale

Minnesota State Fair Grounds **St. Paul** OCTOBER 28th and 29th

We have consigned 25 head of foundation animals, mostly heifers and young cows, with a few richly bred **Ormsby** bulls.

Among the females is a daughter of **Sir Ormsby Akkrummer Hengerveld,** the 39-lb. son of Sir Ormsby Banostine Champion, that is out of a 29.87-lb. daughter of **Sir Pietertje Ormsby Mercedes.** Also a beautiful granddaughter of **Duchess Skylark Ormsby** bred to **Sir Pietertje Ormsby Mercedes 38th,** and another that is from a 29.37-lb. daughter of **Beryl Wayne Paul DeKol.** With these and other Ormsby heifers we have consigned several royally bred young cows with calf to **Sir Ormsby Hengerveld Korndyke,** the son of **Pietertje Maid Ormsby, King Korndyke Colantha Ormsby,** our senior sire, or **Sir P. O. M. 38th,** one of the greatest of the sons of **Sir Pietertje Ormsby Mercedes.**

Among the males is a son of **Sir Ormsby Akkrummer Hengerveld** from a **30-lb.** daughter of **King Colantha Walker.** He is ready for service. Also a son of **Sir Ormsby Hengerveld Korndyke** that is from a dam which combines in the closest possible manner **Pietertje Maid Ormsby, Duchess Skylark Ormsby** and **Colantha 4th's Johanna** — a youngster fit to head any herd.

These are only samples. We suggest that you set aside those dates and send for a catalog. **The Foundation Breeders' Sale** will interest you.

Eight Heifers — All Two Years Old or Under — Year Record Backing

JENNY WREN PIETERTJE
Butter 365 days 1,000.51
Butter 7 days 30.21
Her yearling daughter will be sold.

BESS PIETERTJE ORMSBY MERCEDES
Butter 365 days 1,235.33
Butter 7 days 33.23
Two of her granddaughters to be sold. One bred to "37th".

QUEEN PIEBE MERCEDES
Butter 365 days at 4 yrs. 4 mos..... 1,389.45
Milk 30,230.20
A yearling heifer from her daughter will be sold—in calf to "37th".

(1) Jenny Wren Pietertje 2d — Born April 23, 1919

Sire: King Korndyke Colantha Ormsby, son of Miss Korndyke Maid Ormsby, 1,255 lbs. in a year, and by son of Colantha 4th's Johanna.

Dam: Jenny Wren Pietertje, the 30-lb. 1,000-lb. — $10,000 daughter of Sir Pietrtje Ormsby Mercedes and the world's record 13-year-old, Jenny Wren Lassie 2d.

Bred April 28th to splendid grandsn of "DUKE".

(2) Queen Piebe Korndyke Ormsby — Born September 16, 1918.

Sire: King Piebe Ormsby Mercedes, sire of the junior champion heifer at Minnesota State Fair. He is from a 1,136-lb. 4-year-old daughter of Sir P. O. M. and by a 1,235-lb. grandson.

Dam: Queen Piebe Korndyke. Now on yearly test. She is the only daughter of Queen Piebe Mercedes, the world's record four-year-old with 1,389 lbs. in a year.

Bred April 30th to **Sir Pietertje Ormsby Mercedes 37th.**

(3) Jenny Wren Colantha Ormsby — Born February 1, 1919.

Sire: King Korndyke Colantha Ormsby (See No. 1).

Dam: Jenny Wren Mercedes, 24-lb. four-year-old full sister to Jenny Wren Pietertje. She won first at the National in 1914.

Bred April 11th to "37th".

(4) Lady Rhoda Korndyke Cornucopia — Born April 6, 1919.

Sire: Sir College Cornucopia 2d, son of the famous milk producer, College Belle Wayne. She has 35 lbs. butter and 824 lbs. milk in 7 days.

Dam: Rhoda Korndyke Pontiac Beets, a 28.99-lb. daughter of a 30-lb. son of Pontiac Korndyke. Her dam is a 27-lb. daughter of a 27-lb. cow.

(5) Bess Ormsby — Born January 21, 1919

Sire: King Korndyke Colantha Ormsby. His three nearest dams average above 1,000.

Dam: Bess Pietertje Ormsby Korndyke. Now on test and will make over 800 lbs. She is a daughter of Bess Pietertje Ormsby Mercedes, 1,235-lb. daughter of Sir P. O. M. and Spring Brook Bess Burke.

Bred May 4th to Sir P. O. M. 37th.

(6) Nannette Pontiac Ormsby — Born October 31, 1919

Sire: King Bess, a son of King Korndyke Colantha Ormsby and Bess Pietertje Ormsby Mercedes. Five nearest dams average above 1,100 lbs.

Dam: K. P. Nannette, a 20-lb. two-year-old daughter of King of the Pontiacs.

(7) Grahamholm Colantha Elcey Aaggie — Born 9-13-18

Sire: Sir Winana Beets Segis, famous son of King Segis.

Dam: Elcey Aaggie Grahamholm, A. R. O. daughter of Aaggie Cornucopia Johanna Lad and a 28-lb. cow.

Bred April 30th to Sir Pietertje Skylark Ormsby, whose nine nearest dams average 1,000 lbs.

(8) Isabella Pietje Segis — January 21, 1920

Sire: Uneeda King Alcartra, a son of King Segis Pontiac Alcartra from a 33-lb. daughter of the 40-lb. sire, Johanna McKinley Segis.

Dam: Woodcrest Isabella Pietje, a 31-lb. three-year-old now making over 900 lbs. for the year in mature form. She is a daughter of Pietje 22d Son.

His Sire

SIR PIETERTJE ORMSBY MERCEDES 41ST
(More 1,000-lb. sisters than any other sire in the world.)

Also This Splendid Bull

Colonel Glen Ormsby

He combines the blood of our Bess Burke and Glen Canary families and also of two of Minnesota's greatest sires, Sir Pietertje Ormsby Mercedes and Sir Johanna Canary De Kol.

He carries 75% the blood of: Glen Canary De Kol 2d, butter 365 days at 4 years, 5 months, 1,323.36.

His Dam

GLENN CANARY DE KOL
Butter 7 days at 3 yrs. 34.59
Butter 30 days 139.84
(WORLD'S RECORDS 1914-15)

E. C. Schroeder Farms, Moorhead, Minnesota

Third Annual Sale

Porter County, Indiana, Holstein-Friesian Breeders' Ass'n

50 Registered Holstein-Friesian Cattle

Consignment includes heifers and cows bred to or from sires of National note, such as:

Winterthur Ormsby — Seven nearest dams average:

Butter	7 days	35.84
Milk	7 days	630.23
Butter	365 days	1064.37
Milk	365 days	22491.54

Unaland K o r n d y k e Hengerveld — Three nearest dams average:

Butter	7 days	29.03
Butter	1 year	1146.34
Milk	1 year	24151.80

Took second prize at Indiana State Fair 1918-1919.

CREAMELLE PERFECTION — Grand Champion Indiana State Fair 1919. Breeding of the best blood lines.

KING KORNDYKE ISABELLE VEEMAN — His six nearest dams average: Butter 7 days, 32.77. Grand Champion Ind State Fair 1918 and other fairs. A sire whose daughters are proving to be high producers.

WINTERTHUR SADIE VALE DOSEGIS — His dam as a 2-year-old had a record of: Butter, 7 days, 25.20 lbs.; butter, 1 year, 826.19 lbs.; milk, 1 year, 19,116 lbs. Is a grandson of King Segis Pontiac Alcartra and King Korndyke Sadie Vale.

Come to Porter county to get foundation cattle, where the Indiana State Champion cow is, where we have had 8 out of 10 best cows in the Cow Test Association in the State. Had the highest cow 8 months out of 12 in 1919.

Valparaiso, Indiana, October 30th, 1920

Sale will begin at 12:30 o'clock sharp

On Pennsylvania, Nickle Plate and Grand Trunk R. R. Auto Bus from Kouts and Wheatfield.

For Catalogues write A. C. Mohnssen, Valparaiso, Indiana

Burgess Consignment Sale

October 27, Huntington, Ind.

50 Registered Holsteins

From the Herds of H. C. and C. E. Burgess, Ray Muker, I. F. Keisling & Sons, and Geo. P. Sneider

The Sale will Include:

Daughters of Col. Korndyke De Kol, a son of Pontiac Korndyke, whose first 17 daughters to be tested averaged 24.19 lbs. butter in 7 days as senior 3-year-old, with an average fat test of 4.26%.

That wonderful cow, Lenawee Calamity Pet will be sold. She has 5 seven-day milk records that average 765 lbs., the highest being 818 lbs.

There will be 8 cows bred to King Echo Sylvia Korndyke, a 40-lb. brother to the $106,000 bull.

King Quality Korndyke Fobes, the H. C. and C. E. Burgess herd sire, will be sold. His dam produced 32.5 lbs. butter, 717 lbs. milk in 7 days.

10 bulls ready for service are included, all of them from good record dams.

This is a wonderfully good opportunity to buy some real foundation stock at your own price. It is an opportunitv to get started with pure-breds that are heavy milkers and test high.

Every animal over 6 months of age tuberculin tested and sold subject to a 60-90 retest guarantee.

Sale held in the Huntington Co. Live Stock and Sale Pavilion

Lunch will be served.

Sir Pietertje Ormsby Mercedes 43d

Will be Sold at the National Dairymen's Sale

October 13-14, 1920, Chicago, Ill.

SIR PIETERTJE ORMSBY MERCEDES 43D

His Sire S. P. O. M. has more 1,000-lb. daughters than has any other one bull and his sons are transmitting the same excellent qualities to their offspring. Several of them already have an excellent list of tested daughters and both their sons and daughters may be found among the prize winners in almost any show ring.

His dam, Aaggie Wayne Peep, is one of the best long time producers of the breed with 3 records that average 1,031 lbs. butter in a year, 2 of them made at less than full age. As a 6-year-old cow she produced 34.59 lbs. butter in 7 days and 1,250 lbs. in a year. She and her full sister, Early Dawn Peep 2d, are world's record full sisters for year production with records that average 1,269 lbs.

"43rd" is just coming into the prime of his life. He is right in every way and fit to head the best herd in the country.

Toyon Farm Association, Mills Bldg., San Francisco, California

12 BULLS FOR SALE

Seven are ready to use. All are good individuals and nicely marked. Sires: King Segis De Kol Fayne 8th, a 25.63-lb. grandson of King Fayne Segis and Peldora De Kol Pontiac Pietertje, a 29.52-lb. grandson of King of the Pontiacs. Some have A. R. O. records. For pedigrees and prices write **O. I. Reamer, North Liberty, Ind.**

4 Holstein Bulls for Sale

All by King Segis Pontiac Cor-Will, 190512, whose sire is King Segis Pontiac, 44444, and whose dam is an A. R. O. daughter of Pontiac Korndyke. Also two fine young registered cows, one a granddaughter of Pontiac Korndyke. **Wm. N. Osborn, Wanatah, Ind.**

"The Perfection is the greatest labor saver on the farm and is going to save the dairy industry. I would have been forced to sell my herd if I had not had my Perfection." —G. E. FERSENBECKER.

You Can Keep Your Herd Without Hired Help

HAVE you been thinking of selling your herd because you can't get enough help for milking? Then you are one of those dairy farmers who need a Perfection Milker. Don't sell your cows! Milk with a Perfection and forget the shortage of labor.

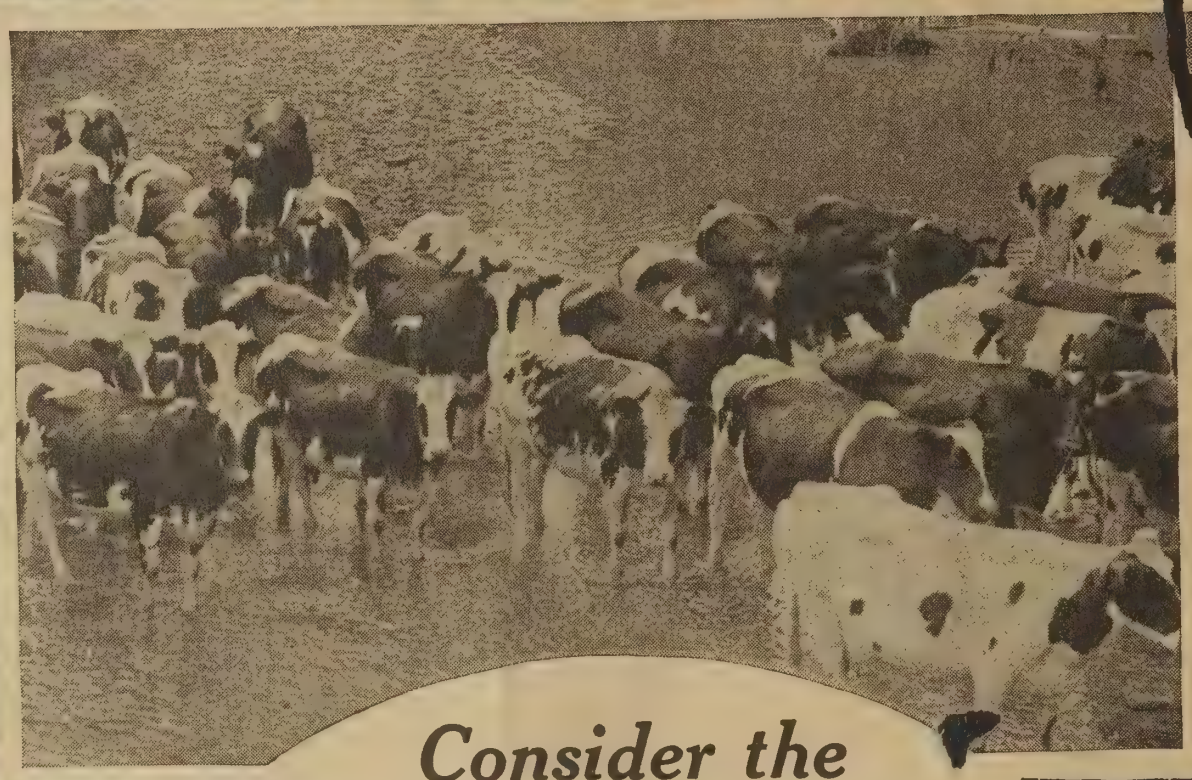
Thousands of dairy farmers have solved their labor problems with Perfection Milkers. One man with a Perfection Milker milks twenty-four cows an hour. He takes the place of three men milking by hand. At this rate what would be your saving on wages? The Perfection more than pays for itself in wages saved in a year's time.

Many Perfection owners are increasing the size of their herds. They tell us their young sons or daughters do the entire milking every day with the Perfection Milker.

Not only does Perfection save time and money, but thousands of users will tell you it has increased the milk flow in their herds. In the Perfection the gentle suction followed by a downward squeeze and a period of rest, duplicates perfectly the action of the calf.

Send For Catalog

Send for a copy of our book "What the Dairyman Wants to Know." It's free. We shall also be glad to give you the names and addresses of Perfection owners near you.



Why milk by hand? It is too expensive.

Perfection Manufacturing Company

PERFECTION MILKER

True Value DAIRY FEED

Consider the Dairy Cow a Machine

A dairy cow is a machine which converts feed into milk. Every machine requires some special attention and care in order to have it do the most work; hence it is *necessary* to consider:

That each cow requires a maintenance ration whether milking or dry.

That *feed* is the *source* of milk.

That *feed, in addition* to the maintenance ration, is *necessary* for milk production.

That good dairy cows produce milk throughout the greater part of their lactation period in proportion to the *kinds* and *amounts* of feeds supplied.

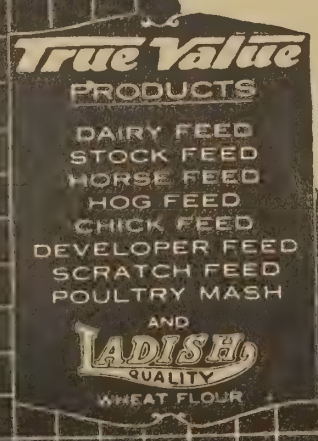
True Value Dairy Feed

is the best feed for dairy cows because it produces the greatest returns for the money invested.

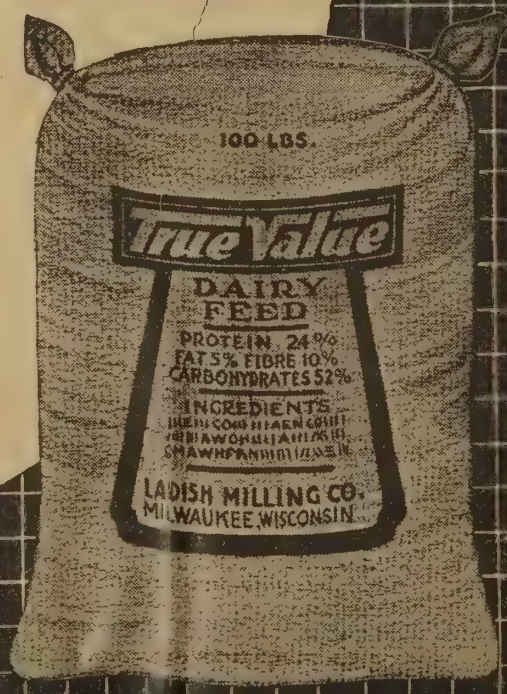
The actual increase of the amount of milk is only one of the returns from feeding True Value Dairy Feed.

True Value Dairy Feed also repairs the broken-down tissues of the animal's body and maintains the *vital energy*.

Our chemists are experts on the subject of animal nutrition. They are at work continually in our modern laboratory testing and examining the ingredients of our feed.



A trial will convince you that our feed will produce more and better results than any other on the market.



If your dealer does not carry True Value Feeds, write us and we will see that you are supplied.

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Volume LX | FORT ATKINSON, WIS., OCTOBER 22, 1920. | Number 14

SWAT THE SCRUB

J. C. McDOWELL

THE expression, "Swat the rooster", applies to one farm enterprise and to one season of the year. The expression, "Swat the scrub", applies to every class of live stock and to every season of the year. In speaking of our 10 billion dollar live stock industry, the 1919 Year Book of the United States Department of Agriculture says: "Better breeding will save a billion dollars."

If that is true it is a safe assertion that the scrub sire does more damage in this country each year than is done by lightning, hail, and forest fires. Like weeds and rust, like plant diseases and insect enemies, he is an ever present source of expense and loss. That is true in connection with the management of every class of live stock, but it applies especially to dairying. No matter what the average production of the dairy herd may be, the scrub sire will quickly drag the descendants down to the low level of his ancestors.

"Swat the scrub dairy sire" should be the slogan on every dairy farm. With him should go the scrub pure-bred and the grade sire. The intelligent use of good pure-bred dairy sires would increase average production, increase total production, and decrease expenses. It would tend to make dairying more profitable and make food less expensive to the consumer. In short, it would increase the wealth of the world without decreasing the prosperity of any individual in it.

Figures from one bull association in Maryland show that of the 17 daughters of association bulls, 16 excelled their dams in production of milk and butterfat. On an average the daughters produced 1,144 lbs. more milk and 26.7 per cent more butterfat than their dams. On most dairy farms where good pure-bred dairy sires are used, similar and sometimes greater gains come from the use of well bred dairy sires.

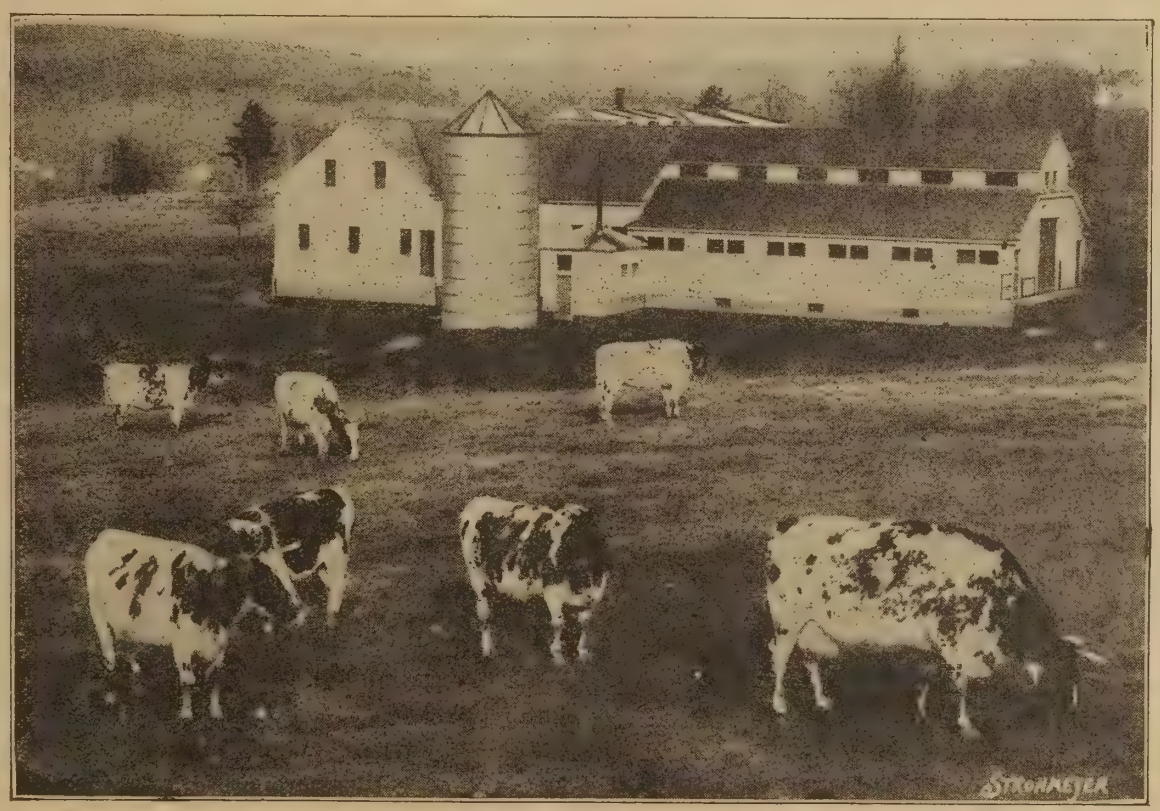
On farms where scrub and grade dairy sires are used, the results are quite different. From one farm we have the following figures: A scrub cow, in one year, produced 146.8 lbs. of butterfat. Her daughter, sired by a scrub bull, produced 126.3 lbs. of butterfat. The granddaughter, sired by the same scrub, produced 99.7 lbs. of butterfat. What would have happened had that kind of breeding been continued nobody knows; because, at that point, the owner woke up and replaced the scrub bull with a good pure-bred. If production records are continued on that farm, the next chapter of the story should make interesting reading.

The decreasing records over a series of generations, showing the results of using scrub sires, are not easy to obtain under normal farm conditions, because dairymen who keep such bulls seldom keep records. Doubtless, if the facts were known, figures like those given above could be duplicated in almost every neighborhood. It certainly paid that farmer to swat the scrub.

On many farms the registered bull is sent to the block before the production records of his daughters are available. A Wisconsin farmer sold his registered dairy bull to the local butcher before the production records of any of the daughters were known. During the following year 11 of the daughters freshened and their average production was 15,047 lbs. of milk and 571 lbs. of butterfat. By that time the valuable bull was dead and his hide converted into leather.

At the 1918 National Dairy Show in Columbus, Ohio, one very striking exhibit consisted of the hide of a similar bull. That bull had also been sent to the block before his daughters had made records. If all the good registered bulls could be used to their full capacity, and if all were used as long as they were fit for service, we would soon see a tremendous increase in the average production of our dairy herds. The cow testing association keeps the records of the dams and daughters. The bull association makes it possible to use good bulls to their full capacity and to keep them as long as they are fit for service. If given the opportunity these two organizations will revolutionize the dairy business of this country.

Good pure-bred sires bring increased production, and increased production brings increased profit. Tabulations of over 16,000 yearly records of cow testing association cows show that as butterfat production increased from 150 to 200 lbs., the income over cost of feed advanced from $25 to $40. At 250 lbs. of butterfat the income over cost of feed was $55. At 300 lbs. it was $70. At 350 lbs. it reached $85. At 400 lbs. it advanced to $99. And at 450 lbs. it climbed to $115. The average income all the way gained approximately $15 for every gain of 50 lbs. in butterfat production. In other words, the dairyman gets that much more for his labor, because the $15 is the gain after paying for the feed.



It is fair, therefore, to assume that the dairy sire increases the average production of his daughters as compared to their dams will greatly increase the labor income of the farm. That this is true has been shown by farm surveys made in Illinois, Wisconsin, Washington, and Ontario. Labor income is what the farmer has left for his labor after all other expenses for running the farm have been deducted, such as family labor, interest, insurance, and taxes.

A farm survey of 577 farms in northern Illinois shows that it pays to swat the scrub. On those farms where scrub bulls were used the labor incomes averaged $170; on farms where grade dairy bulls were used the labor incomes averaged $484; and on farms where pure-bred dairy bulls were used the labor incomes averaged $862.

In Dane County, Wisconsin, the results were similar. On the farms where grade dairy sires were used the labor incomes averaged $140. On the farms where ordinary pure-bred dairy sires were used the labor incomes averaged $782. On the farms where carefully selected pure-bred dairy sires were used the labor incomes averaged $2,854. Evidently it pays not only to use pure-bred dairy sires but to select the best of the pure-bred sires.

From a farm survey in Wahkiakum County, Washington, we have the following figures. On those farms where grade dairy sires were used the receipts per cow averaged $64.10 and the labor income averaged $161. On those farms where pure-bred dairy sires were used the receipts per cow averaged $78.40 and the labor incomes averaged $591. The difference in receipts per cow was only $14.30 in favor of the farms on which pure-bred sires were used, but that was a gain of $14.30 for every cow on the

The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Milk Cow Needs Plenty of Feed

"Grain feeding should always be in proportion to milk production. The cow in milk, if a Holstein," says C. H. Eckles, chief of the Dairy Division of the Minnesota College of Agriculture, "should be given about one pound of grain to every four pounds of milk produced. A Guernsey or Jersey needs one pound of feed to three of milk. The dry cow in good condition needs little, if any, grain.

"The cow is a milk machine and feed is the raw material. Like any factory or machine, economical operation is possible only when plenty of raw material is available. Turning a dairy cow loose in a pasture does not insure that she will get sufficient feed to hold up in milk production as she should, especially from now until the time when regular housing and dry feed will be in order.

"Practically every real dairy farmer will have silage available. Don't wait too long before beginning to use it. Within ten days after silo filling is completed, the silage is ready to use and unless pastures are unusually good it is well to begin feeding it.

"The experienced man knows that it is easy to let cows drop down in milk from poor feed, but very hard to bring them back to the high level again later even if good feed is given. Good management means keeping the conditions and feed right all the time so there will be no drop in milk at any time from lack of feed. The cow that has what silage she will eat will be well cared for so far as roughage is concerned so long as the pasture furnishes fair grass. When the grass begins to fail, bring out the alfalfa and clover."

To make people laugh is to make them forget. What a benefactor to humanity is he who can bestow forgetfulness.—VICTOR HUGO.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

A Song of Butter

Butter that is yellow,
Colored up like gold.
Butter that is mellow,
Butter that's too old.
Butter sold in restaurants,
Never made of cream,
Butter that is all a chance,
Not what it may seem!
(But the best, the only kind. What we daily yearn
Is the sort they make at home in a dairy churn.)

Butter that is fashioned
Into pretty shapes.
Butter that is rationed,
Small as Concord grapes.
Butter strong and mussy,
Butter rancid, too.
Stuff that makes you cussy,
When the meal is through.
(But the pure, sweet butter—Ah, to it we turn!
Is the sort that mother gives us from the churn.)

The Log-fire Time

The log-fire time, the time of dreams,
When hissing embers glow and shine.
Ice covers all the meadow streams,
We cork the elderberry wine.
The crops are in, the fields are bare,
The sitting room is full o' joy—
The sound of popping corn is there,
The laughter of a girl or boy.

But, in the hearth, the flames leap high,
The logs are crimson with their heat,
And, dancing sparks above them fly,
We think of jam and turkey meat.

What Fate Betides

A farmer plays a gambling game,
The weather makes it hit or miss.
No two fool seasons are the same;
When fickle fortune grants her kiss.
It rains too much or not at all,
It freezes, when it should be hot.
Some ill-timed day the hailstones fall,
And sleet the next day, like as not.

When crops are fine the labor thing,
Makes any farmer knit his brow.
If crops are small it seems to bring
More hands than chores for them allow.
The bugs and beetles, worms and sich,
The blights and weevils, all combine,
To keep the clan from being rich,
For blights must blight and bugs must dine.

But I have noticed that the herd,
Keeps on, regardless, day and night.
No blasted hopes—no dreams deferred,
No weather problems to set right.
With half a chance, the cows produce,
The dairy products have a sale,
There is no petty, lame excuse,
I've never known the herd to fail.

Jersey Cow—"I have put a complaint in to my landlord. It's almost impossible to sleep here nights. My health is impaired."

Mrs. Holstein—"Why, what's the matter?"

Jersey Cow—"The young folks are holding so many barn dances and husking bees in here, that it is no longer a high class apartment for any self-respecting cow."

The Old Dairyman's Philosophy

When a cow puts her foot in the milk pail it's no worse than the stubborn things men and women do. I've seen more than one man put his foot in it, if you know what I mean.

Next to looking inside the safe deposit vaults of a country bank, there is no fairer sight than a farm cellar at the end of a prosperous season.

A great many farm boys leave the old homestead for the city, but why worry—sooner or later they come back and then they stay for good.

I wonder what would happen if farm mothers suddenly decided to all leave the farm? It's an idea worth thinking about. Mebbe they will, some day, just to teach the young folks a lesson.

The Supreme Evidence of

DE LAVAL

CREAM SEPARATOR SUPERIORITY

Naturally the cream separator does not make or break the average farm user. The majority of them have no sure means of knowing just what their separator may be saving or wasting.

But the big user in the whole milk creamery or city milk and cream plant does know, and in the long run the separator means success or failure in his case.

That's the reason why practically all of the world's users of factory size cream separators use the De Laval, and why the few such machines of other makes occasionally sold soon find their way to the scrap heap. And it may well be remembered that De Laval superiority means relatively just as much to the small as to the big user. Ten dollars a month mean as much to the farmer as ten dollars a day to the creameryman.

It's not only a matter of quantity and quality of cream, but of capacity, labor saving, dependability and durability over a long term of years.

A De Laval catalog helps to make these facts plain. The trial of a De Laval machine does so better still. Every local De Laval agent stands ready to prove them.

If you don't know the nearest De Laval agent simply address the nearest main office, as below

Adventures in Community Team Work

R. M. TURNER, WASHINGTON

TRAVELERS have wondered from what spot came the delicious Orcas Island pears which have appeared for years on the menu of the Waldorf-Astoria in New York, and few have realized that they came across the continent from a small island about twenty-five miles long in the most northwesterly part of the United States.

The island, lying between Vancouver Island and the mainland at the mouth of Puget Sound, is rock-bound and rugged, broken by valleys always in sight of salt water bays and snow capped mountains. So much for the environment of the Orcas Island pear.

Although fruit production is the principal business of the farmers there, nearly all raise a wide diversity of crops, including grain, dairy cows, poultry, and sheep. The sheep pasture in the rugged hills and are brought down on the meadows after the hay is off. But let us consider the organized work of the people.

In reciting the history of farmers' organizations on Orcas Island, one farmer was heard to remark to a friend, "Of all the organizations we have had during the past twenty years, our farm bureau is the most promising. It is surely a growing youngster."

True as this statement is, we must go further to state that although it is yet an infant, it is receiving a conservative, well balanced food from the hands of many of the island's most practical and substantial farmers. And although young, it is already paying for its ration in work and accomplishments.

Take for instance the community meeting held by the Orcas Farm Bureau recently. Fifty-six men and women sat down to a good old community dinner in the Grange Hall at noon. Outside the weeds were just slipping through the ground and growing just as usual. Nevertheless, these farmer families felt that they would be fully repaid for the day's vacation from cultivator and garden.

The advent of the first county agent on Orcas Island in 1920 was met with approval, for the farmers had read a great deal on farm bureau work in the farm papers and knew what to expect. At the first meeting which the agent held on the island, a request was made for the formation of the farm bureau. At the organization meeting a month later forty-eight families joined the bureau and work on the following program was begun:

1. To organize a cow testing association.
2. Ten farmers to keep daily milk records.
3. To test 200 cows for tuberculosis.

A FARM BUREAU POULTRY DISEASE DEMONSTRATION IN PROGRESS

4. To arrange demonstrational fertilizer plots.
5. To get local cannery to handle vegetables also.
6. To pool all the fruit on the island.
7. To hold two drainage demonstrations.
8. To secure a grain warehouse with feed mill.
9. To pool the wool of the island.
10. To hold one clothing and one millinery school.

Since the organization meeting, scarcely a week has passed but some phase of the work was developed or was brought to conclusion. The dairy project leader started the work off by organizing a cow testing association and by securing eleven farmers to keep daily milk records. He furnished the United States Department of Agriculture barn sheets. Also work was started on signing the farmers for the tuberculin test on their cows, making a well rounded dairy program.

Grain Warehouse Needed

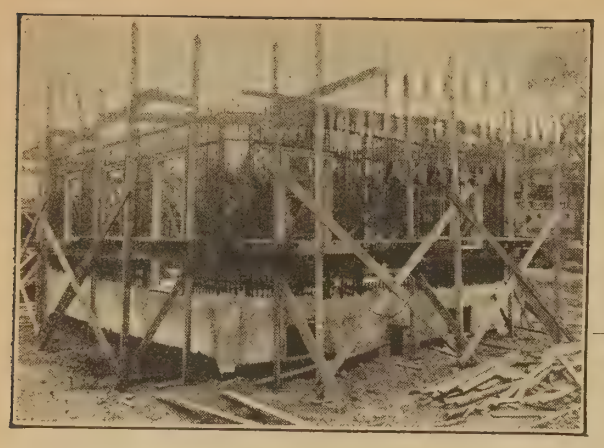
The community is isolated and consequently the market facilities are not up to standard. The grain raised is shipped to Seattle by boat usually in the fall at a charge of fourteen dollars per ton freight and wharfage. It is held there until the poultrymen and dairymen need oats, barley, and millrun, and is shipped back in the form of scratch and dairy feeds at a higher figure and with the accumulated freight charges

(Continued on page 616)

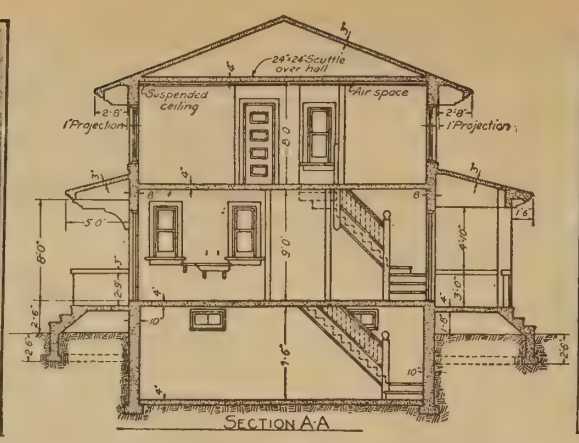
Whitewater Calf Industry

ORIN CROOKER, ILLINOIS

CALVES to the number of five or six thousand a year are being shipped by express to all parts of the country from the little city of Whitewater, in Walworth County, Wisconsin. It would be difficult, perhaps, to find a publication circulating in the agricultural field that does not carry from one to a dozen advertisements of "farms" in this region that offer calves of any age and either sex for sale. Consequently, it is natural for the dairymen in Oklahoma, Georgia, or Texas to vision Whitewater as a community circled by farms that produce a remarkable surplus of calves. In fact, one buyer who was attracted by the many advertisements he saw, and who went there to bring home a carload of young animals stated he had formed the idea that calves must grow on trees in that vicinity—and that crop failures in the calf line must be unknown. When he reached Whitewater he found a clean, thriving, busy little town set in the midst of splendid dairy farms, but he failed to find calves growing on trees—nor did he find them growing on the farms in any greater number than in similar dairy districts. Six or seven express trucks filled to capacity with crated calves stood on the depot platform, however, awaiting shipment as he alighted from the train. Had he paused to look over the address labels he would have found the animals were consigned to points in almost any of the states of the Union. The magician who removes three or four rabbits from a silk hat is not less wonderful, perhaps, than these remarkable "farms" in southern Wisconsin that supply dairymen from coast to coast with calves ranging from shipments of a single animal to a hundred or so at a time.



There are two sides to the story which it is proposed to tell in this article, and it is the intention to tell each of them in an impartial way. The writer visited Whitewater, not to buy calves but to satisfy his curiosity in regard to the thriving industry that centers at this point. It is believed that an unbiased account of the situation will benefit both the dairymen of the country and the men engaged in marketing calves in wholesale quantities. First, then, let it be stated that there are in the vicinity of Whitewater the usual number of breeders who have been working for years to build up herds according to the most approved methods. Some of these men have pure-bred animals that have been developed along splendid blood lines. There are also the usual number of dairymen handling grade cows, but whose herds are headed by pure-bred sires. In short, the dairy industry around Whitewater compares most favorably with that of any other similar community in this splendid dairy state. Several breeders of dairy cattle in this vicinity advertise calves and other stock for sale, but less than five per cent, probably, of the calves that are shipped from Whitewater are dropped on the farms that cluster about this point. The Whitewater calf industry, taken as a whole, is essentially a mail order proposition and it has developed to such an extent that it would be a physical impossibility for the dairy farms in this region to supply even a fraction of the calves that are handled by its shippers. This fact, however, should not wholly prejudice one's opinion. There is another angle to the story as will be shown further on, that must appeal to any dairyman who looks at things in a large way.



"A CALF NEVER LOOKS LARGER OR FINER THAN IT DOES IN A CRATE"

A word at this point in regard to the history of this industry will help the reader to visualize the situation. About a dozen years ago a certain individual, who has since become one of the largest shippers of young stock from this point, found it necessary to dispose of a few grade calves for which there happened to be no local demand. In an effort to realize more than stock yard prices for them he

PERMANENT FARM HOMES NECESSARY

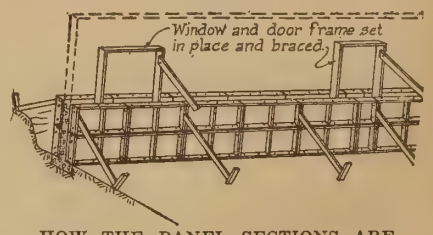
H. COLIN CAMPBELL, ILLINOIS

ATTRACTIVE and comfortable farm homes are now recognized as more necessary than ever. Similar recognition is being given to the need of more careful planning and building than was devoted to farm house needs a few years ago. The same factors which have prevented many home building plans in cities throughout the country from consummation have also prevented many needed, long planned, and hoped for improvements on the farm.

Cessation of building during the war, followed by the rapid rise in building costs, has created a shortage of farm homes that in a way is comparable to the housing shortage of the various cities. In some respects it may be that this rural shortage of homes is felt more keenly in that much of the unrest of farm labor is due to the unsatisfactory housing conditions on our farms. On the majority of our farms even today, it is unquestionably true that scant regard is given to providing the comforts and conveniences to which farm help is entitled and which as a natural right it expects. So while much study has always been given to the planning of city homes, only recently has there been displayed a tendency to give just consideration to farmhouse requirements. That is the reason perhaps why the average farm home fails to compare favorably with the average city one in the matter of comforts and conveniences so necessary to true home life. Another reason is perhaps due to the fact that more often than not the rural home is planned while it is being built; in other words, if the final product may be considered as having had a plan it has been developed from day to day while actual construction progressed. On the other hand, practically every city home represents the efforts of an architect to crystallize the desires of the future owner or occupant. Many a farm home, in addition to having no plan when originally built, represents a collection of additions from year to year as the household needs demanded different accommodations. Through the initiative of the United States Department of Agriculture and several state agricultural departments, notably Wisconsin, Minnesota, Illinois, and Iowa, experts appreciative of farm home requirements have given considerable study to farm home planning and construction. As a result several standard plans have been developed and published along with many home making and home furnishing suggestions in official bulletins devoted to the subject.

FIRST FLOOR PLAN OF CONCRETE HOUSE, VERTICAL SECTION OF WHICH IS SHOWN AT BEGINNING OF THE ACCOMPANYING ARTICLE.

It goes without saying that rarely should or can two farm homes be planned exactly alike and the result be that each occupant's individual needs will be fully met or met in the best degree. The number in the family to be accommodated, the kind of farming done, which naturally has its relation to the quantity of farm help kept, as well as many other factors such as whether the farm is north where winters are cold or south where they are mild, have their effect not only on the house plan but on the method of construction.



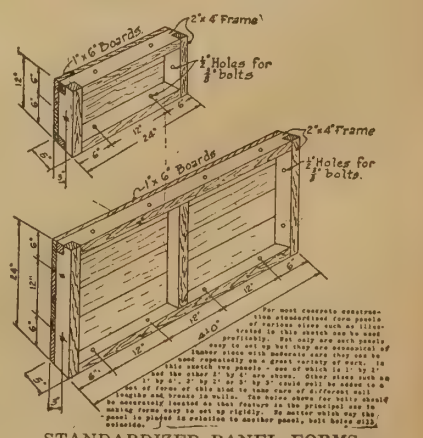
Whether the home is planned for town or country, it is evident that it should incorporate certain fundamental features that may be laid down as essential to the well planned and well built house. The things which everyone expects a house to provide are shelter from the elements, safety for the various personal effects of the family, and a place where the family's social life may be developed and out of which contentment will grow in its fullest measure. It is true that farm home requirements differ in some respects from the requirements that the city home would be expected to meet so the planning of the farm home calls for familiarity on the part of the planner with strictly rural life and the conveniences particularly associated with such life. Work of the farmer and farm housewife occupy a longer day than do the labors of the city dweller. Physical fatigue is probably greater, opportunity for mental recreation probably less. For this reason even with the best of roads those living on farms cannot avail themselves as regularly as can the city dweller of the many means for rest and relaxation which in town are always within a few minutes reach. Therefore, the farm home must supply more in the way of "atmosphere" leading to contentment than might be looked for in the city home. In other words, in the city one can go out and find within easy reach what the home lacks; in the country the home must make up for the absence of nearby diversion.

In order that these ends may be realized, one can readily see how necessary it is to plan carefully the rural home. Nearly everyone knows pretty well what he would like to have included in the home plan but actual planning with reference to relation of rooms and general conveniences to each other, particularly for economy of design, should be placed in the hands of an architect having the ability to interpret the intending builder's desires in a practical way. The writer believes that some day farm women will realize that they can get enough indoor exercise in a house in which all of the rooms are on one floor rather than insisting strongly for the two-story farm house where most of the things which the housewife wants are either upstairs when she is down or vice versa.

The whole idea in home planning should be toward efficiency and labor saving without sacrifice of comfort. The tendency is to reduce size of rooms so that the number of steps the housewife will have to take in housekeeping will be reduced to a minimum. In the past the average big house, whether in town or country, was built without any thought as to whether it was room that was wanted or whether it was evidence that the owner was able to pay for a showplace. The result was that the farm housewife, whose labors are none too light anyway, never saw the end of a day's work. Bedrooms are now being made smaller than formerly, but with more regard for ventilation and sunshine. Kitchens are smaller to save steps; halls, which serve no useful purpose except to take space from other rooms that should be larger, are being eliminated. Dining rooms also are smaller and in many cases are being made either an adjunct of the living room or dispensed with by substitution of a dining nook or alcove. Ceiling heights are being reduced to make heating less expensive. Frills, fancies, and non-essential details are conspicuous by their absence. Many individual pieces of furniture, once regarded as indispensable, are now no longer needed because their counterpart is built in the house. Cupboards, window-seats, china closets, and sideboards are now a part of the architect's plan. These features properly worked out not only make the actual furnishing of the home cheaper, but make it more efficient because they are time and step savers.

In these days more than ever before is it necessary that homes be planned with a view to freedom from burdensome upkeep expense. In all kinds of construction, temporary makeshift methods are giving way to those which secure the closest approach to permanence. With permanence attained in the greatest degree, it is natural that a number of other quite desirable results will also be realized. Chief among these is firesafeness.

A quality home weathers storm, fire, and any other common causes tending toward depreciation, without in any way omitting the comforts and conveniences which home implies. With present increased costs in all directions, it is necessary that cost be determined not on the basis of dollars and cents spent but solely from the standpoint of quality secured.

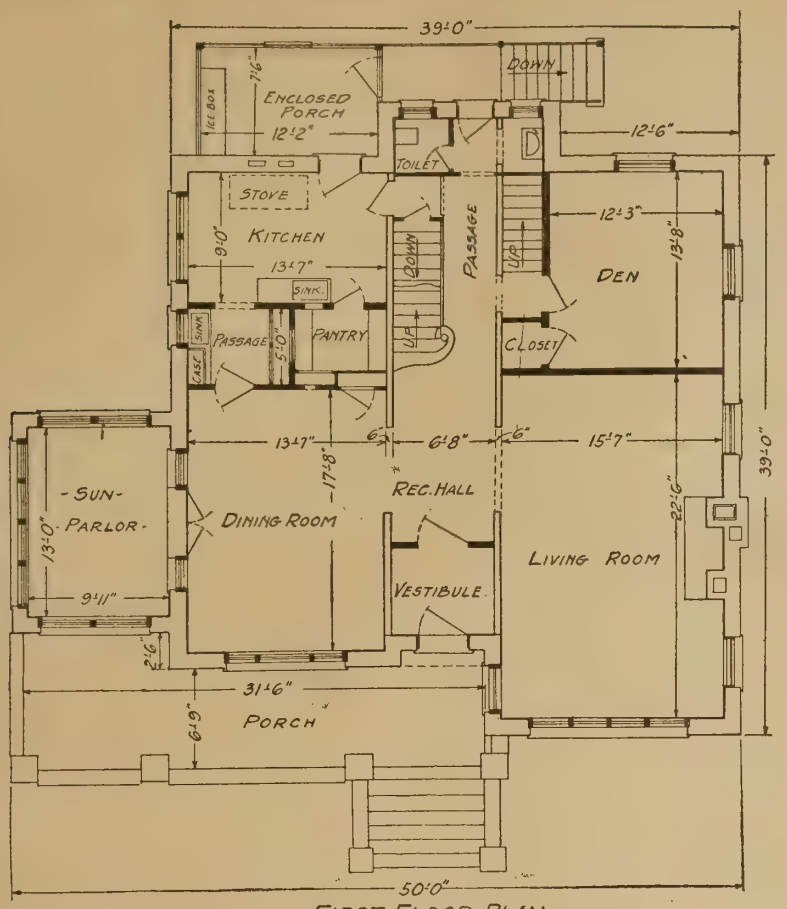


HOW THE PANEL SECTIONS ARE SET UP AND BRACED

It is not surprising that homes, whether in town or country, were in the not very far distant past built of materials that did not endure. Lumber was the most commonly used material because our forests were a ready, cheap source of supply. Now, however, it is necessary to give heed to the needs of the future as well as those of the present. That is the reason why we see an increasing use made of those building materials that make for durable homes.

Concrete as Building Material

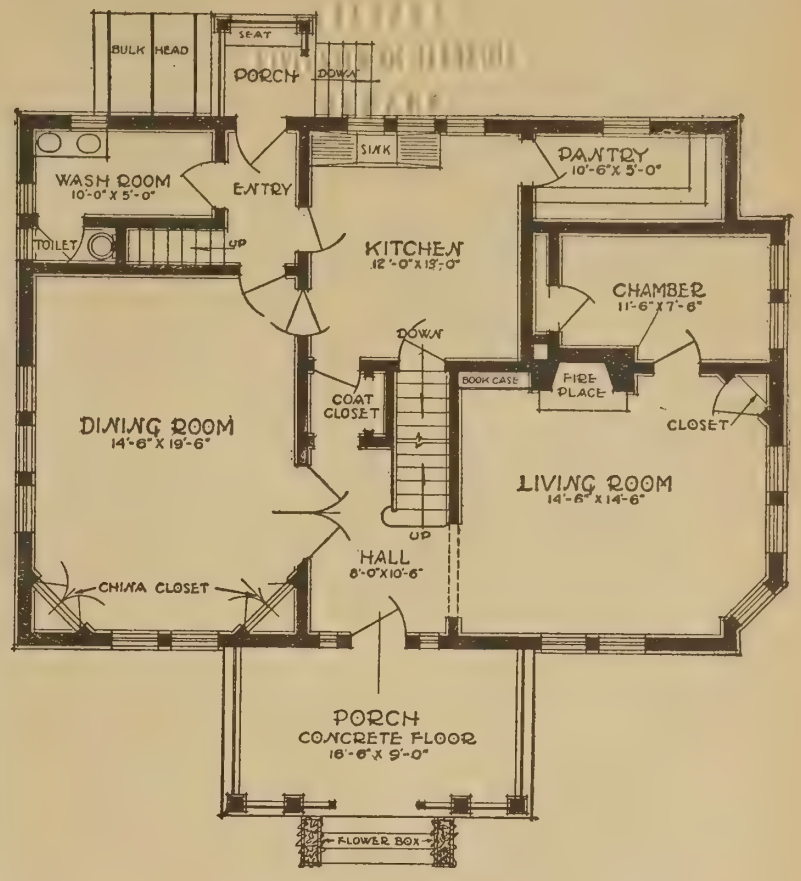
Among the foremost of such materials is concrete, and its adaptability is such that in house construction as well



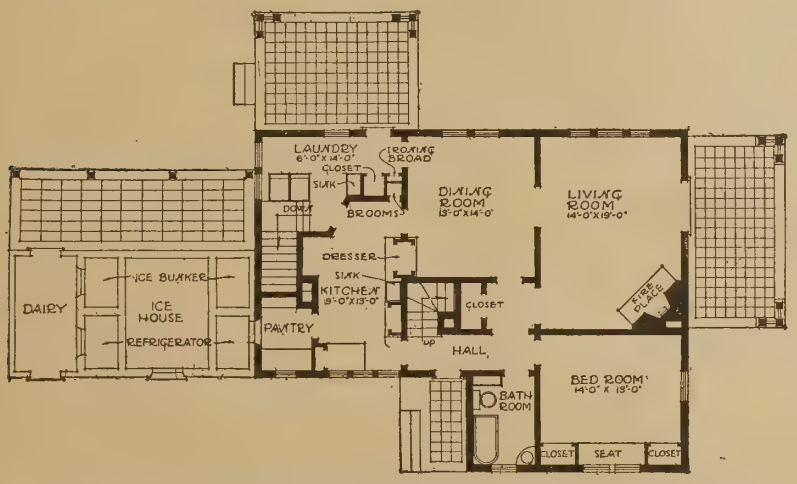
(Continued on page 613)

STANDARDIZED PANEL FORMS

One of these is 1'x2' and the other 2'x4'. Other sizes can also be used to take care of different lengths and breaks in wall. The holes for bolts should be accurately located, so that no matter which way the panel is placed in relation to another panel, the bolt holes will coincide. These forms are easy to set up, are economical of lumber, and can be used repeatedly if given moderate care.

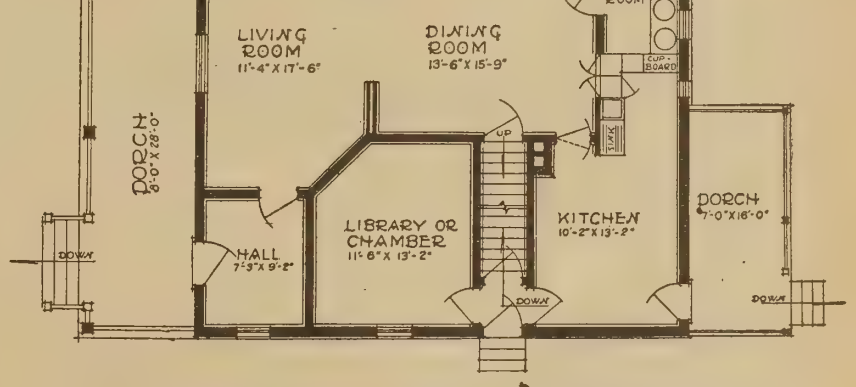


SUGGESTIONS FOR PLANNING FARM HOMES



FIRST FLOOR PLAN

THIS FARMHOUSE PLAN PROVIDES MANY FEATURES MOST DESIRABLE IN THE FARM HOME



The sunparlor may be used as a sewing room or children's playroom. The den off living room may serve as the farm office. The enclosed porch off the kitchen may be fitted up to serve also as a washroom for farm help—sort of a clean-up place before entering the house.

THIS FARM TENANT COTTAGE MAKES IDEAL QUARTERS FOR THE MARRIED FARM HAND WITH SMALL FAMILY

Construction is concrete throughout, including roof, thus making a permanent, fireproof, expense-free structure. There is plenty of room between the two bedrooms to insert small bath instead of the closets shown and arrange for closet room by separate wardrobes.

Prune Industry Stabilized Through Co-operation

A $25,000,000 Business Handled by a Producers' Marketing Company

HERMAN STEEN, ILLINOIS

THERE used to be a theory that a co-operative marketing organization could not be a success until the industry was nearly down and out. "Farmers won't work together when they have any money in their pockets," said the theorists. "They won't co-operate until they are compelled by dire necessity to do so. They won't learn the principles of co-operation until they have gone broke, or at least are badly bent." This idea was so generally accepted at one time in California that most students of co-operation regarded it as one of the fundamentals to success in co-operative marketing.

Along came the prune growers in 1917 and dropped a bomb upon this theory. The prune growers were reasonably prosperous when they organized, and their industry was distinctly on the up-grade. For several years before 1917, there had been some money made in producing prunes. Growers had suffered a good many ups and downs in times past, however, and they organized to make permanent their temporary prosperity.

The old theory was badly shattered when the prune growers' organization started operations successfully. It completely disappeared in a year or two because the California Prune and Apricot Growers, Inc., soon developed into the nearest approach to perfection that has come out of the co-operative marketing movement in California.

Ups and Downs of Prune Growing

The cause of the alternate periods of depression and prosperity which formerly prevailed in the prune industry was thus described to me by Sheridan W. Baker, a leading grower in Santa Rosa County. "We produced prunes the best we knew how," he said. "A high degree of skill in production was developed among the growers. A period of good prices always resulted in stimulating the industry and inducing larger plantings. When these new trees came into bearing, there was a period of overproduction and low prices, and this resulted in orchards being pulled out.

"Soon the pendulum swung to the other extreme, and we were riding on the crest of prosperity. The money that was made the good years was lost in the poor years that followed as surely as day follows night. I have observed, too, that this same rule applies to nearly all kinds of farming except where stabilization has been effected by co-operative organization."

Local Associations Failed

The prune growers made a number of attempts to organize in periods of depression as long ago as 1900, but the organization thus formed soon failed. Growers in each prune-growing community formed separate associations, but the speculators played one against the other and broke up the local associations.

Nowhere in California has the failure of the local unit as the basis for co-operative marketing been demonstrated more strikingly than in the prune industry. Time after time the prune growers of Santa Clara, of Santa Rosa, of Sonoma, and of other districts formed their separate organizations and saw them follow each other into early graves. Because of the lack of a central agency to gather information, direct sales, and weld the business of the locals together, the locals quarreled among themselves and went to pieces. It reminds one of the sage saying of Benjamin Franklin, "We must all hang together, or we will hang separately."

Another thing which kept the prune growers from uniting was the jealousy which existed between various sections. Santa Clara growers were sure that their prunes were better than those grown in the Santa Rosa district, and vice versa.

A Broader Viewpoint

Finally in the spring of 1917 the growers did succeed in uniting upon one proposition—that they were not getting their share of the consumers' prune dollar. "Prunes are selling too high in New York in comparison to what we get for them," they said. They began looking upon the proposition from the standpoint of the industry and not from the standpoint of individual growers or of districts. When the point was reached, it was easy to organize a state-wide association of market prunes.

The apricot owners joined too; as apricots and prunes grow in the same districts, are processed and handled much alike, and seek the same markets.

For general manager of the new association, the prune growers selected H. G. Coykendall, part producer and part packer, a shrewd business man who knew the prune game as well as any man knew any business. He had the entire confidence of the growers, as he had helped previous organiaztions sell the crops of their members.

Developing Machinery for Marketing

In four months' time Coykendall and the intrepid souls working with him had succeeded in getting 70 per cent of the prune and apricot growers in California to pledge their entire crop to the association for a term of years. They had developed a brand new marketing machine to handle a 110,000-ton crop of prunes which had always been marketed through the eight or ten big speculative firms which formerly dominated the dried fruit business of the Pacific Coast. They had to provide warehouses and packing sheds, secure an outlet for the product, and above all had to finance the undertaking—all in one short summer.

It is a tribute to the resourcefulness and skill of the leaders in this new movement that the prune and apricot crop of 1917 moved to market in machine-like fashion, almost like it had always gone through the new channel. The association fixed a price upon the prunes it controlled, sold them at that price and paid the growers the money received less the cost of handling the crop and marketing it. That same procedure has been followed each year since the beginning.

The Contract with the Growers

The prune and apricot association, like the raisin growers, citrus growers, and all other co-operative organizations in California, has a contract with the growers which binds them to deliver all the dried fruit produced to the association plants. If a grower fails to do so, he may be sued for breach of contract; in fact, a few such suits are brought each year to make examples of a few flagrant violators.

"Our contracts have been held by the courts to be legal and binding," said Manager Coykendall. "We do not spy on the growers to see whether or not they are fulfilling the contracts. The other growers take care of that, and public opinion as a matter of fact is the agency which keeps contracts in force. The chief and almost only agency which causes these contracts to be broken is the speculators, who occasionally offer one grower a premium in order to cause trouble in the association."

Getting Ready to Market

The association now operates 26 packing plants of its own, and has arranged with other packers to handle its fruit through their houses. The prunes are dried, processed, graded, standardized, and packed. The grading is according to quality and size. The number of prunes per pound determines the grade of prunes, and to a considerable extent the price, also.

Every grower receives the same price per pound for the same quality of fruit. There is no speculating in prunes any more. Every grower has the same chance at the market as every other grower, and nobody has any advantage. The crop is pooled, and separate accountings are made to the growers for every separate quality and size of fruit they produce. When the year is over, all have received the same rate of pay for equal quality of fruit.

Financing Crop Movement

An advance to the growers is made at the time the crop is delivered to the association. This is about two-thirds of the amount expected to be paid for that grade that year. In order to make the first payments, it is necessary for the association to borrow large sums of money. This was formerly very difficult to do, but the banks of California have learned that there is no better security than the note of a co-operative marketing association, because that note is backed by the whole crop which the association handles.

As the prunes are sold, money comes in, the notes for the advances are taken up and the growers are paid the difference due them. It takes nearly a year for final payment to be made, though from 75 to 90 per cent of the sale price is received by the grower in the first three months after crop delivery.

An Organization Without Profit

The California Prune and Apricot Growers, Inc., was at first a stock company, but was changed this year into a non-profit organization without capital stock. Each now pays a membership fee of $10. The growers by districts select a voting board of 39, which elects the directors, who in turn have executive direction of the affairs of the company. The voting board is the same as the voting trust of the raisin growers, described in detail last week.

The voting board elects all the directors but one, who is chosen by the governor of the state to represent the public. A number of California co-operative associations have this public representative.

This public representation is a deliberate bid for the support of the general public, as the co-operators believe that the people will be back of any institution which they believe is operated with due regard for their rights. "This has been one of the fundamental reasons for the success of our marketing associations," declares Aaron Sapiro, attorney for several of the organizations. But imagine the

MRS. R. G. WALLACE, SALES MANAGER OF THE CALIFORNIA PRUNE AND APRICOT GROWERS, INC.

H. G. COYKENDALL, GENERAL MANAGER OF THE CALIFORNIA PRUNE AND APRICOT GROWERS, INC.

American Tobacco Company, the International Harvester Company, or the New York Central railroad asking the government to put a representative of the public on its board of directors.

The Growers Fix Prices

In August each year the board of directors meets and sets the scale of prices for the prune crop then about ready to go to market. "We keep the cost of production in mind, but it has very little to do with setting the price," says Manager Coykendall. "We get all the information we can in regard to the size of the prune crop, the probable demand as determined by advance orders and other things, condition of the foreign market, probable competition from other countries, general business conditions, and then proceed to fix a price that makes a living for the grower and is at the same time just to the consumer. That is the exact procedure we follow, and I will leave it to anybody if it is not business-like and fair to all parties concerned."

It is well to note also that while the prune growers have been investigated, their operations have always been approved by the government authorities.

Selling the Prunes

The duty of selling the prunes belongs to Mrs. R. G. Wallace, who holds a business position probably as important as that held by any woman in America. Last year she supervised the sale of over $25,000,000 worth of prunes, and total sales will probably exceed $30,000,000 this year. Half or more of the prunes are sold by the time prices are fixed. They are sold at the "firm-at-opening-price", which means that the contracts are good at whatever price the association sets.

"The speculators have always objected to us setting the price as late as August," Coykendall told me. "They want us to set it six or eight months earlier so they can play with the crop a bit, too. We would be speculators, too, if we fixed the price early when we wouldn't know any more about the size of the crop than a farmer knows about his corn crop when he plants it. We have always stood firm on that principle and will continue to do so."

Swatting the Speculators

Buying the crop from producers and selling it later is only one way of speculating in farm products. Another is buying it when it should be moving in various products. They don't monkey with prunes any more, however, because the California Prune and Apricot Growers, Inc., know just how many prunes every wholesale dealer in the United States can legitimately handle.

When he buys more than that amount, it is evident that he is speculating. Bing! His supply is shut off, and as he can't get enough prunes anywhere else to speculate with, he is compelled to be good. There are a number of chronic speculators, however, to which the prune and apricot growers refuse to sell any product, and, moreover, they refuse to sell anything to any other company, which resells it to these speculative companies.

"We are following up this plan to kill speculation as far as prunes and apricots are concerned," said Mrs. Wallace. "We are against speculation in prunes and apricots because it increases prices to consumers and thereby reduces consumption."

Financing the Warehouses

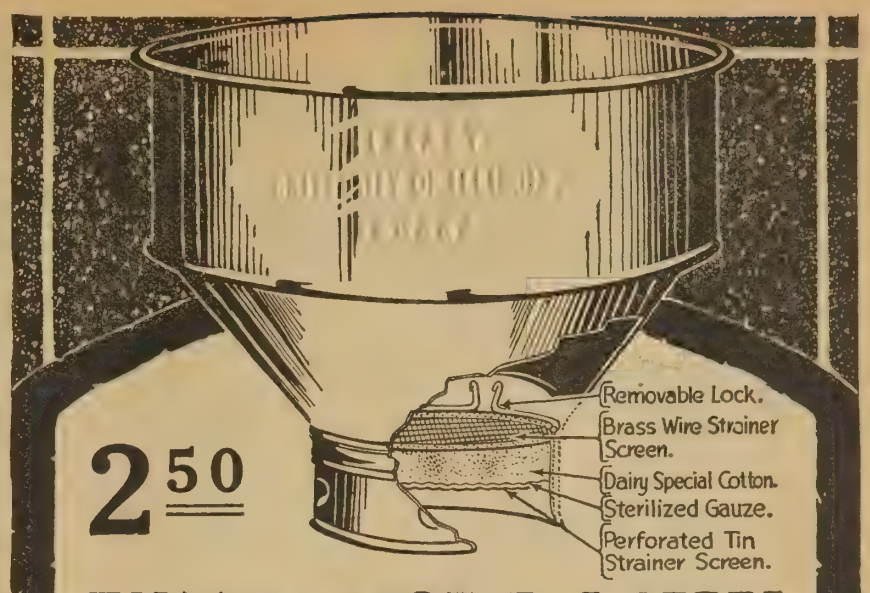
The physical equipment of the prune and apricot association warehouses and processing plants is owned by a subsidiary company called the Growers' Packing and Warehousing Association, Inc. The California Prune and Apricot Growers, Inc. (the marketing association) pays the other company a certain amount for doing the mechanical work necessary in preparing dried fruit for market. This charge is $7 per ton, the standard charge for handling and packing prunes in all the packing houses in California. There is a considerable profit in doing the work for $7 per ton, so the accumulated profits are used to retire the outstanding capital stock (about $1,000,000). It is expected that this will all be retired in two or three years, except a few shares necessary to retain the corporation form of the company. These, of course, will be held by the marketing company.

The reason why two companies were formed originally is that a company cannot give itself a warehouse receipt. The receipts were necessary to borrow money, to pay advances to the growers for their crops, so the double company plan was devised. This same plan is often used by commercial business concerns.

Better Quality of Product

A separate story might well be written about the improvement in quality of product that has been brought about by the prune growers' association. Prunes are all graded according to one standard, which is now known the world over. In fact, the other handlers of prunes are even compelled to guarantee their prunes to equal the quality of those handled by the association. In 1918, when a rain fell in the picking season, the association worked out methods of saving damaged prunes, and saved several million dollars for growers by the processes developed.

The same story could be told about every important co-operative marketing association in California. "More has been done by co-operative associations to improve the quality of product than by every other agency combined, and then some," says W. H. Heileman, secretary of the California Farm Bureau Federation.



The Problem of Overproduction

The prune and apricot growers, like the citrus and raisin growers, have found that their chief problem is a constantly increasing production, induced by the prosperous condition of the industry. They are careful to point out that there is no overproduction as yet, because the supply of prunes is still consumed year after year, though constantly growing larger. The job ahead of the association may be guessed from the fact that there are now 85,000 acres of prunes in bearing in California, and 65,000 acres more planted. The apricot acreage is increasing in the same proportion.

The association is spending about $300,000 per year in advertising the prunes and apricots in order to help sell the larger crops. "Our advertising campaigns have been tremendous successes," says Coykendall. "They have kept the demand for prunes constantly on the increase."

The strength of the association can be judged from its experience in 1919, when freight exchange went to smash. Formerly half of the prunes produced were exported. The exchange situation cut off the foreign demand, so the association proceeded to sell the whole California crop in America, and the Oregon and Washington prunes were also sold in this country.

The triumph of the California prune and apricot growers represents the highwater mark in the success of producers' co-operation in America. It is well worth study by any other group of farmers who hope to embark in extensive plans of co-operative marketing.—Copyright, 1920, by Standard Farm Papers, Inc.

2.50

FILTER YOUR MILK

CP CHAPMAN STRAINER AND FILTER

A combined strainer and filter for the price of strainer only. To use the Chapman as filter, insert a layer of cotton and sheet of gauze between the two screens.

The filter will remove bacteria, dandruff, hair, blood corpuscles, straw and other substances that a strainer only can't catch. Thus will greatly improve the quality and flavor of the milk and prevent it from souring quickly.

Can be quickly taken apart for cleaning.

Consists of heavily tinned charcoal steel bowl, ring lock, fine mesh brass screen and perforated tin screen. Cotton and gauze furnished at extra prices below.

Strainer and Filter Complete $2.50

Postage extra, 30c

Wgt. 2 lbs. Size 12" in diameter.

Dairy Special Absorbent Cotton

Association Notes

Weiser—Payette Co-operative, Idaho:—This association was organized in May and now has a membership of 34 herds with 312 cows of which the majority are pure-breds. All of the members have pure-bred sires. There is one bull association of six members. The majority of members have silos or will erect them this fall. Butterfat sells for 68c per lb.; butter, 65c; milk, $3.85 per cwt. Local feed prices are: Alfalfa meal, $42 per ton; molasses feed, $63; mill run, $67; soy bean meal, $81; cottonseed meal, $84; linseed meal, $96; barley and oats feed, $58; alfalfa hay, $10 to $12.

Wausau—Marathon, Wisconsin:—Four members are doing A. R. work. One carload of oil meal was purchased co-operatively in August, and a few farmers have been feeding grain with pasture. Four barns have been remodeled and modern steel equipment installed. August market milk sold in this community for $2.40 per cwt. and 6c per point above 4%. The creamery paid 59½c per lb. for fat and the cheese factory 54c. Milk retails for 14c per quart, butter for 60c per lb., and cheese for 35c per lb. Hay is rated at $24 per ton; bran, $46; oil meal, $68; hominy, $68; Wisconsin Balanced Ration, $70; International Dairy Feed, $51; corn meal, $3.15 per cwt.; oats, 60c per bushel; Nutra Feed, $62 per ton.

Ellington, Wisconsin:—September milk testing 4% sold to the condensery for $3.30 per cwt. Milk retails for 8c per quart. Feed prices are: Bran, $45 per ton; oil meal, $68; oats, 55c per bushel.

Whitewater, Wisconsin:—This association hopes to bring the production of every cow to 40 lbs. or more by better feeding, better care, and elimination of poor producers. September market milk testing 3.5% sold for $3.35 per cwt. and 4c per point above. The condensery paid 95c per lb. for fat and the creamery paid 74c. Milk retails for 14c per quart and butter for 65c per lb. Alfalfa sells for $34 per ton; bran, $45; oil meal, $66; cottonseed meal, $68; gluten, $64; oats, 65c per bushel.

Amherst—Nelsonville, Wisconsin:—A number of the members fed grain rations throughout the summer with good results, while others commenced last month. During September a carload of oil meal was bought at a saving to the members of $350. Three carloads of bran have been ordered co-operatively. Three of the members installed modern steel equipment and drinking cups in their barns, and three concrete silos were put up in the last two months. Two milking machines have been installed during the summer. The creamery paid 66c per lb. for fat in September. Milk retailed for 12c per quart and cheese for 40c per lb. Feed prices are: 31% oil meal, $75 per ton; bran, $45; oats, $44; Unicorn, $80.

Bourbon County, Kansas:—September has been the worst month of the summer for cows in this association. Pastures are fine but the flies are so bad that cows have fallen off about half in milk production. The silage crops are so large that the silos will not hold them, and many new ones are being built. Market milk testing 4% sold for $3.13 per cwt. and 3c per point above. The condensery paid 86¼c per lb. for fat and the creamery paid 55c. Milk retails for 15c per quart; butter for 57c per lb., and cheese for 37c. Feed prices are: Oil meal and cottonseed meal, $3.75 per cwt.; bran, $2.20; corn chop, $3; Meads feed, $3.30; oats, 55c per bushel.

Pioneer, Minnesota:—Market milk sold for $4.50 per cwt. in September. The creamery paid 64c per lb. for fat. Milk retails for 12c per quart and butter for 64c per lb. Silage is rated at $4 per ton; hay, $15 to $20; corn, $35 to $40; bran, $40; oil meal, $66; oats, $30.

Knox County, Illinois:—One pure-bred bull was purchased in September, making this association one hundred per cent in the use of pure-bred sires. Two members have exchanged pure-bred bulls. A few of the members have purchased an ensilage cutter co-operatively and have filled their silos. We have 22 members who own 20 silos, which are practically all filled. Several tons of alfalfa hay have been purchased by the members. Some of the members exhibited their cows at the state fair and came home with their share of the honors. One new dairy barn is being built and much interest is shown in it and in everything that helps to better the dairy cows of this association. September market milk testing 3.5% sold for $4.37 per cwt. and 2c per point above. The condensery paid 56c per lb. for fat, and in addition 75c per cwt. for milk. The creamery paid 59c per lb. for fat. Milk retails for 15c per quart and butter for 70c per lb. Feed prices are: Corn and cob meal, $2 per cwt.; ground oats, $2; wheat bran, $45 per ton; cottonseed meal, $66; oil meal, $78; Cow Chow, $75; Dairyfeed, $59; alfalfa hay, $36; corn silage, $8.

Wahkiakum County, Washington:—Four pure-bred females with good Register of Merit backing were purchased, making the owner a total of ten pure-breds. Five good grade cows with C. T. A. records behind them were purchased by other farmers in the association. Twelve cows that had proven themselves to be poor pro-

ducers were sold for beef. The creamery paid 65c per lb. for fat.

Rutherford County, Tennessee:—A consignment sale was held in Murfreesboro September 15th and many members took advantage of this opportunity to dispose of their unprofitable cows. Several high bred and well producing animals were purchased at the J. J. Murray sale on September 28th by members of this association. Feed prices are: Corn, $3 per cwt.; oats, $2.10; wheat bran, $3.60; linseed meal, $4; molasses, $2; cottonseed meal, $3.70; Schumacher, $3.

Dairying Thirty Years Ago

Taken from the Issue of Hoard's Dairyman of Oct. 24, 1890

As a rule, we think farmers who do not believe in keeping cows in milk ten or eleven months of the year are those who have never yet been thoroughly converted to the practice of generously feeding their cows all the time for even seven months. On the other hand, those who really do feed well soon learn that they cannot afford to stop feeding royally and let the cows do nothing but eat five months of the year.

⚜

Some compute that a loss of one pound of flesh from a cow, because of lack of food, results in a loss of a pound of cheese that the cow would have produced had she not been deprived of the food; and further that the loss of a pound of fat from her body from the same cause shrinks a pound of butter from that she produces.

We think that is true provided the cow is not too fat for a milker, to begin with; and also think that such shrinking of her product is but the beginning of a calamity, for it gets the cow going in the wrong way and weakens her for a stalwart producer.

Our idea is the cow should be always in good heart and vigor, and fed so she will yield her maximum of dairy products and not run down in vigor, and not run down to fat, either.

⚜

"Buckeye", in the National Stockman, says dairying is a "side show" in his method of farming, and so he has large cows to raise large calves for meat making, and takes what butter he can get; and says he gets at the rate of 250 pounds per annum from his 1,200-lb. Shorthorns; but says, "if we were making a specialty of butter dairying, why of course we would not breed to a 'butter Shorthorn', but to the best Jersey that we could find; then these half-blood Jersey heifers to another Jersey bull, and presently we would have a herd of Jerseys capable of producing 300 pounds or more of butter per year."

Clearly so, and in the meantime he would have reduced the weight of his cow from 1,200 pounds to 900 pounds at least. Then he could keep twelve cows on what nine such as he has now eat, and instead of having 2,250 pounds of butter and nine calves, he would have 3,600 pounds of butter and twelve calves to show for the same expenditure for food. Where is the profit in running "side shows?" Even this is conceding too much for the so-called "butter Shorthorns;" for those that will yield 250 pounds of butter per annum are scarcer than hen's teeth, while the 300-pound Jerseys are not a rarity at all.

⚜

Thousands and tens of thousands of dollars are lost every year by farmers unwisely concluding they can save some feed that would otherwise not be cropped, but would be lost unless they turn their sensitive cows out in the cold and rain in the fall to pick a few mouthfuls. The loss on their systems is not compensated by eating what they thus get. If any profit is made on them after they have thus suffered, it must come from what they are fed in the manger. The man who knows he would not be comfortable in his ordinary clothing, if he wandered about as the cows do, should know he cannot make any money by thus sending out his cows. He had better send steers, colts, or sheep at such a time, if he has them, and keep his sensitive cows in their stables.

⚜

Mr. C. L. Garilson in Farm, Stock, and Home says of moneyed men who take up agriculture as a means of recreation: "We laugh at their failures and copy their successes."

Growth in Danish Dairy Industry

From the last annual report of the Danish Agricultural Department, as quoted in the report of the British Consul at Copenhagen recently issued by the British Government, the Agricultural Gazette gives the following synopsis: Since the mechanical cream separators were introduced into Danish dairies, about ten years ago, the effect in increasing production has been enormous. From 1883 to 1885 the exports of butter rose from 19,000,000 pounds to 26,000,000 pounds, and then, ascending by what may with truth be termed "leaps and bounds", it attained its present figure, estimated not to be much under 60,000,000 pounds annually. Instead of exporting grain, the country now imports large quantities of corn and other foodstuffs. The adoption of the separator has had a great deal to do with these changes, for not only can ten per cent more butter be extracted from a given quantity of milk than was possible under the old system, but greater quantities of milk can now be dealt with and worked up at once into an article of export.

Timonium Sale Averages $510

In the Timonium sale of Guernseys at Timonium, Maryland, September 23rd, the highest price reached was $2,500, paid by Highland Farm, New York, to S. M. Shoemaker for Laverna's Queen. Louis McL. Merryman sold Glencoe's Miss of Maple Hill for $1,525 to A. S. Zell of Maryland. My Rose of the Prairie, consigned by R. M. Cooper, South Carolina, was purchased by G. B. Fenwick of Maryland for $1,500. The average price of the sale was $510, which, according to Mr. Merryman, president of the Maryland Guernsey Breeders' Association, was a very satisfactory price. The great proportion of the animals sold went to Maryland breeders. The following lists those which sold for $500 or more:

Glendon Land Company, Delaware	
Gerar Hilda	$500
G. B. Fenwick, Maryland	
My Rose of the Prairie	$1,500
Lady Justina of Locust Lane	850
W. T. Peyton, Virginia	
Dorothy's Princess	$700
Highland Farm, New York	
Laverna's Queen	$2,500
A. Stanley Zell, Maryland	
Glencoe's Miss of Maple Hill	$1,525
Governor's Grace	775
G. W. Koser, Pennsylvania	
May Queen of Gerar	$525
King's Elva	525
King's Surprise	525
Herdlea Ultra Queen	2,200
H. W. Leeds, New Jersey	
Rose of Gerar	$525
Bess Bloom of Locust Lawn	650
H. G. Haskell, Pennsylvania	
Follyland Butter Queen	$900

Jersey Cattle Notes

For week ending October 1:

Number of animals registered: bulls, 225; cows, 711; total, 936. Number of transfers recorded: bulls, 225; cows, 603; total, 828.

Faster, Deeper Plowing!

THREE miles per hour, with the pull of a dozen-odd horses ***concentrated*** at the draw-bar—all under easy, quick control of one operator. Two Kansas State Records Broken

R. B. BECKER, Kansas College of Agriculture

WITHIN the past few weeks the senior four-year-old and senior two-year-old records have been broken by Kansas Holsteins, and a new state's record established over all breeds and ages.

Lady Volga Colanthus Segis 414741, at 2 years, 10 months, 1 day of age, produced 20,037 lbs. milk, 608.6 lbs. fat or (760.8 lbs. of 80% butter) in 365 days. In addition she has an "eight months after calving" record of 423.4 lbs. milk, 13.27 lbs. fat in seven days. These records are subject to correction by the superintendent of Advanced Registry.

Lady Volga Colanthus Segis is owned by Geo. Young & Sons. She was sired by Wit Segis Abbekerk 85556, and out of the cow, Lady Volga Colanthus 217904, who recently completed a record of 14,090.2 lbs. of milk, 426.663 lbs. of fat, at 6 years, 6 months, 17 days of age. She is a full sister to two other state leaders: Lady Volga Colanthus 3d and Lady Volga Colanthus 2d. These three full sisters hold three state records which average 20,002 lbs. of milk, containing 605.4 lbs. of fat.

A new state milk record over all breeds and ages, as well as a new fat record in the senior four-year-old class has just been completed by Carlotta Empress Fobes 330881 who gave 24,556.9 lbs. of milk containing 694.558 lbs. of fat.

Carlotta Empress Fobes was sired by Sir Carlotta Pontiac Cronus 2d 108457, and out of the cow, Empress Fobes De Kol 181176. She was bred by Mr. C. W. Dingman of Kansas, who purchased her sire from the Kansas State Agricultural College. Carlotta was purchased by the college as a two-year-old with first calf, and the next year she produced 15,505 lbs. milk containing 437.79 lbs. fat. After completing this record she dropped a heifer calf, and started on the record which now ranks first in the senior four-year-old class and her milk record the highest in the state of Kansas.

KANSAS LEADING SENIOR TWO-YEAR-OLD

Lady Volga Colanthus Segis, owned by Geo. Young & Sons, has just achieved state championship in her class with a production of 20,037 lbs. milk containing 608.6 lbs. fat. She has two full sisters that also hold state championships, the three records averaging 20,002 lbs. milk containing 605 lbs. fat.

Washington Producers Buy Milk Plants

HOARD'S DAIRYMAN:—The Skagit County, Washington, Dairymen's Association has placed $10,000 in escrow to cover a two-year option on the plant of The Federal Condensed Milk Company at Mount Vernon. This, it is claimed by members, will give them ample time to arrange the financing of the deal.

The plant has a capacity of 1,000 cases per day and during the past several flush seasons it has been worked to capacity.

Whatcom County dairymen are preparing to issue bonds to the extent of $200,000 to finance their various cooperative enterprises.

It is stated by officers of the county association that the new powdered milk plant at Lynden is complete and the old building has been remodeled. The machinery is now being installed and the plant will be operating by the first of the year.

During the past six months 660,000 lbs. of butter have been made at the Lynden plant as compared with 680,000 lbs. manufactured during the previous twelve months. As high as 64 cents per pound has been paid for butterfat and the average sale price for butter has been 56 cents. The plant has shown a satisfactory profit and it is felt that the bonds will be sold with little difficulty.

Milk producers in the condensery districts of the Pacific Coast are viewing with alarm the present condensed milk market situation. During the past week canned milk has witnessed a decline of fifty cents per case and the price paid to producers has dropped.

The Carnation Milk Products Company in a letter sent to producers on Oct. 1 states:

"We are announcing a decline in our price for fresh milk to $2.50 per cwt. for the first half of October, and as this decline is so unusual, we feel that it calls for an outline of the conditions that have necessitated it.

"The curtailment of purchases by all foreign countries, largely due to the inability of the foreign nations to finance such purchases, has reduced exports this year to approximately one-half of the exports for the year 1919.

"Restrictions of credits by banks in this country, resulting in jobbers and retailers reducing stocks to absolute minimum quantities, have caused the manufacturers to accumulate heavy stocks of canned milk in addition to the stocks accumulated through reduction in export trade.

"Public announcement has been made that over forty condensed milk plants in the East will discontinue manufacturing on October 1 for at least ninety days, but will continue to receive milk from their patrons and turn it into butter or cheese, or other channels which are best available.

"Over seventy-five per cent of the canned milk production of Washington and Oregon has had to find a market in other states, largely east of the Rocky Mountains, and the recent heavy increases in freight rates, coupled with heavy declines in price of canned milk, particularly in the East, have made it impossible for the time being to meet competition on the basis of prices which have been prevaliing.

"After very careful and serious consideration we have concluded that until conditions become more favorable, a curtailment in our manufacture, as well as adjustment in prices, is required.

"As a partial solution of the problem, we have decided to notify our Kent, Washington, and Forest Grove, Oregon, patrons that we will permanently close those two factories as soon as practicable, and we expect to relocate the machinery, at a later date, in factories close to the markets where the product will be sold. At our other factories we are compelled to curtail the manufacture of canned products temporarily, but we feel we owe it to our patrons to handle their milk at the best price possible under the circumstances, converting whatever is necessary into butter or other channels.

"We greatly regret being compelled to take this action, but under the conditions now existing, not only in the United States but in the world's markets, we have no alternative. We view the ultimate future with confidence, and are already redoubling our efforts in increasing and expanding our markets, both domestic and foreign, so we may continue to provide a greater outlet for milk produced in the districts served by our condenseries.

"We believe our entire actions in the matter are for the ultimate good of the dairying industry here in the Northwest."

⚜

At the Washington State Fair, held in Yakima, about fifty Holstein breeders in attendance effected a state organization, electing F. S. Stimson, owner of Hollywood Farms at Seattle, president, and R. L. Rutter of Ellensburg secretary.

In discussing conditions throughout the state it was stated that the demand for high-grade Holsteins is increasing and breeders are finding it increasingly difficult to supply a sufficient number of animals for the buyers.

The meeting was adjourned to assemble again at the Pacific International Live Stock Show, to be held in Portland, Oregon, Nov. 19th. A name for the organization will be decided upon at that time.

⚜

J. E. Wrage of Arlington, president of the Washington Guernsey Cattle Club, opened the second annual convention of that association which was held at the state fair. About one hundred members were present.

Acting State Commissioner of Agriculture F. H. Gloyd spoke on a proposed bill to be submitted to the legislature appropriating funds to reimburse breeders who lose any of their stock on account of the tuberculin test administered by the state department.

Washington. ALTON D. HURLEY.

Another 800-lb. Fat Jersey Record for Oregon

On her Register of Merit record, recently finished, Minetta of Ashwood 330962 produced 16,872.4 lbs. milk, 860.36 lbs. fat at four years, five months of age at start of test. This record qualifies her as the fourth highest junior four-year-old of the Jersey breed and the second highest, for the same class, in the state of Oregon.

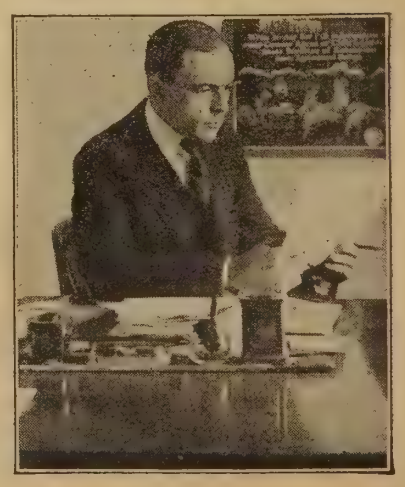
Minetta has now completed three consecutive years' Register of Merit records, qualifying for Class AA on the first two, and she will again enter this class on her latest record when she drops her calf. The records are:

	Milk lbs.	Fat lbs.	Age yrs.	Age mos.
	11,478.8	566.32	2	0
	12,913.6	710.58	3	2
	16,872.4	860.36	4	5
Total for 3 yrs.	41,264.8	2,137.26		

She has averaged 13,755 lbs. milk and 712 lbs. fat with calf each year.

The sire of Minetta of Ashwood is Eurybia's Prince 74218, the sire of six daughters in the Register of Merit with an average production of 11,514 lbs. milk and 551 lbs. fat. The productive ability which this bull has inherited he has transmitted to his offspring.

Her dam is Minetta F. 213563, a Register of Merit cow with a record of 414 lbs. fat, Class AA, having carried a calf 280 days during her test.



Minetta of Ashwood was bred by John F. Forbis, Oregon, owned and tested by N. H. Smith, Oregon.—American Jersey Cattle Club.

To Strengthen Information Work of Department of Agriculture

Secretary Meredith has reorganized the departments of publication and information work of the Department of Agriculture, and the appointment of a Director of Information to have general supervision of all these activities, both in Washington and in the field. He has named E. B. Reid, formerly chief of the division of publications, to the new position. Mr. Reid's relation to the work will be similar to that formerly held by Assistant Secretary Ousley, who had charge of such activities during the war period.

Harlan Smith, formerly in charge of the office of information, has been appointed Chief of the Division of Publications. The work now being performed by the Office of Information hereafter will be known as the Press Service, which will be in charge of Dixon Merritt, and will continue under the immediate direction of the Chief of the Division of Publications.

The Director of Information will bring about closer co-ordination of the information and publication work of the various bureaus with that of the Division of Publications and will be charged with formulating and executing plans for developing and improving the information of the department as a whole to the public.

HARLAN SMITH

Uncle Sam's Hired Men Who Serve You

Dr. Carl L. Alsberg Is Food Taster to H. R. H., The American Public

H. P. SHELDON

This is the seventh of a series of articles this publication is running, in co-operation with the U. S. Department of Agriculture, to acquaint our readers with the type of men who are making possible the wonderful service the department is rendering and stands ready to render our readers, that those not now availing themselves of these services may do so.—EDITOR.

DR. Carl L. Alsberg, Chief of the Bureau of Chemistry, U. S. Department of Agriculture, gave evidence of the profession he was to follow quite early in life. On April 2, 1877, without given name, middle name, or degree, he lifted his voice in unison with two or three million other New York City babies and announced that he was interested in food. His first demand in life was for pure food for himself, and it seems likely that his last demand will be for pure food for other people. He has already done a good deal of talking about it and a great deal of even more effective acting.

Back in the old days there was one individual in every royal court whose doubtful pleasure it was to taste every morsel of food from the king's plate before it was passed to his majesty. If, after taking an experimental sip of the king's wine, the royal taster threw a fit and died on the floor, it was assumed that the wine was not good for a healthy king to drink, and they got a new bottle —and a new taster.

The New York infant who howled so lustily in 1877 is now taster for His Royal Highness, the American Public. Fortunately for Dr. Alsberg and for the public he serves, it is no longer necessary to obtain a new taster every time a new food poison is discovered. If it were, Alsberg would need more lives than the toughest Thomas cat that ever squalled beneath a midnight moon, and I shall prove this later.

He graduated from Columbia College in 1896 with the degree of Bachelor of Arts, and received the degree of Doctor of Medicine in 1900 from the same college. After extending his studies in the leading universities of Europe, Dr. Alsberg returned to America to teach biological chemistry at Harvard University, where, three years later, he was made chief of the Department in Biochemistry.

In 1908, he was appointed chemical biologist in charge of the Poisonous Plant Laboratory, Bureau of Plant Industry, United States Department of Agriculture, and in 1912, when Doctor Wiley left the Bureau of Chemistry, Doctor Alsberg was selected to take his place as its new chief.

Carl L. Alsberg is best described by a trenchant Yankeeism—"a good, sizeable man." He has a very pleasing personality and a very rank old pipe. His eyes are the quick, interested eyes of one who loves his work and his fellow men.

We have seen how the old style Royal Taster depended upon his palate to protect his patron, and how his life, though interesting, was short. He was appointed to his post by that power of influence which rests between the words "probably" and "surely"—if he accepted he'd probably die, but if he didn't accept, he'd surely die.

But Carl L. Alsberg doesn't depend upon his palate to detect the harmful element in an adulterated article. His instrument, provided by the American public, is the Bureau of Chemistry, and it is so broad in its organization that it is almost impossible to enumerate its agencies or to detail its many functions. Almost it would be easier to name the interests and industries not touched by Doctor Alsberg's organization, but one may obtain a bird's-eye view of the Royal Taster's job by glancing over this partial list of the subjects studied by the chemists and engineers at Washington.

Most people like their fish, poultry, and eggs fresh and sweet, and these three items are among the most important on our list of foodstuffs. All three are travelers; the fish must journey inland from the sea; the poultry and eggs must come from the country to the city, and all are extremely perishable. Doctor Alsberg's chemists have done a great deal to perfect packing, shipping, and storing methods for these and other perishable food products.

Methods of preserving and packing permit a more complete utilization of the fruits and vegetables. "Wealth lies not in what we have but in what we waste" is an axiom never lost from sight by the Bureau of Chemistry. Doctor Alsberg applies the principle to more things than food. Clothing and the leather that goes to shoe us wear the longer for the nearly magical touch given the processes by the workers down there in Washington.

A cry went up from the cloth factories when the war cut off that brilliant and variegated stream of color that flowed into this country from Europe. It called attention to a new industrial need, and this bureau of a thousand interests fostered a dye industry that is to be America's own.

Somewhere in the list of the thousand and one things that the bureau is doing—in several places, probably—you will find items which concern you directly, as they all do indirectly, and it will be easier to understand why a scientific knowledge of chemistry is only one of Doctor Alsberg's qualifications for his post.

Every little while a group of these unscrupulous manufacturers and dealers face the courts and make an effort to explain why they put glue in the gelatin they sold, or why the canners' product issued under their brand happened to be composed of putrid, decomposed articles instead of the wholesome product they advertised it to be. No manufacturer or dealer can long escape the Alsberg probe if his product is adulterated, misbranded, or poisonous. The Bureau of Chemistry will get him in the end—be sure of that!

CARL L. ALSBERG

Medicines, too! America uses a good many thousands of gallons of patent medicines each year and the doctor sees that the stuff is properly marked. A patent medicine manufacturer can no longer place a mixture of tea and tire cement on the market with the statement that it will cure everything from mumps to compound fractures. He can still make it, but he has to label it correctly and must not offer it to the public as a cure for ailments that it will not cure.

The work of the Bureau of Chemistry with by-products heretofore considered worthless has made possible the manufacture of domestic dyes of such quality and in such quantity as may free us from dependence upon foreign manufacturers. These experts found the corn cob, the poor despised corn cob, to be crammed with latent wealth. A valuable binder suitable for cardboard manufacture is taken from it, as well as fluids that are extremely essential in the manufacture of certain other products. Dr. Alsberg's organization went to work upon the cull lemons and citrous fruit problem. Thousands of tons of citrus culls were thrown away in the days before the government chemists found a way of saving the material. Now there are four concerns in California which turn out 1,500,000 pounds of citric acid, 500,000 pounds of citrate of lime, and 50,000 pounds of lemon oil each year. Orange culls are used in an equally profitable manner.

Out in the wheat fields of the Pacific Northwest the farmers were sustaining an annual loss of $1,000,000 a year from thrasher fires and explosions in 1914. The worst of it was that no one really knew what caused the explosions or started the fires. But the Bureau of Chemistry found out. It was dust! Just ordinary grain dust, but capable, under certain conditions, of all the condensed deviltry contained in a case of "TNT". Last year the fire and explosion losses dropped to $15,000, and this man, who saw in chemistry the key to many problems, was responsible for the good that has been done.

He's doing the same thing for the dusty factories and elevators where, in the 20 months before the preventive work was begun by the Bureau of Chemistry, 36 men and women had been killed, many more injured, and $7,000,000 worth of property

(Continued on page 619)

The Story of a Producer

STAR OF WILSON

STAR of Wilson No. 214175 lead the Oostburg, Wisconsin, Cow Testing Association last year with a production of 16,716 lbs. milk containing 591 lbs. fat. She is a pure-bred Holstein owned by J. P. Brill, Jr.

Star commenced her year's cow testing association work in July, 1919, when pastures were short and dry. She was dried off in November and freshened on January 9, 1920, presenting her owner with twin heifer calves. Although she freshened in very thin condition, her owner was persuaded to enter her on a seven-day test period, with the result that 43 days after freshening she made 573 lbs. milk containing 17.6 lbs. fat. Knowing that Star was going to make an increase over her previous year's work, her owner was persuaded by the association tester to give her some special care from the time of her freshening to the end of the association year, nearly six months. She averaged 80.7 lbs. of fat per month during this period.

The eight tons of milk produced by Star was delivered to a local cheese factory and was valued at $476.46. The total cost of feed was $180.01, leaving a profit of $296.45 above cost of feed. In other words, she returned $2.64 for each dollar expended for feed.

Star is not only a producer but she is a reproducer as well. She has three producing daughters and they all give promise of being as good, if not better than their dam. While Star was yet a young calf, her owner came near selling her on account of her markings and type but was persuaded by a member of his family to keep her. Little did he dream at that time that she would some day be the leading cow in one of Wisconsin's best cow testing associations.—W. W. REED, Tester.

EDITORIAL COMMENT

THE FARM BUREAU

We desire to call our readers' attention to an article elsewhere in this issue which gives a resume of pending agricultural legislature which will be presented to congress when it convenes. It is not our purpose to comment upon the merits of any of these bills, for the brief review of each one clearly sets forth their purpose and object and the reader can determine for himself whether they are the kind of bills that should be enacted into laws. We desire to emphasize, however, that through the American Farm Bureau Federation there are representatives in Washington looking after agricultural legislation. This character of work points out clearly one of the many things which the American Farm Bureau Federation can do for the farmers.

It should be borne in mind that the farm bureau does not need to enter politics in order to secure the passage of bills of benefit to agriculture, but can work with any congressman or senator, regardless of which party he belongs to, in order to have these bills enacted into laws. It is a mistake to think it is necessary to form a farmers' party in order to secure legislation highly desirable for the advancement of agriculture. There will be far less objection to enacting these bills into laws if the representatives of the American Farm Bureau Federation concentrate their efforts to secure the support of congressmen and senators, regardless of party, rather than attempt to make them political issues.

RAISINS AND MILK

The raisin growers of California have found it valuable to advertise their product. They recognized the raisin is not an essential food but that it is a desirable food and to create a market for their product spent the sum of $440,000 last year and their total crop was sold for $40,000,000.

Before they organized on a co-operative plan they sold raisins as low as 1½ cents per pound and speculators claimed an overproduction. In 1912, 35,000 tons of raisins were produced. They were handled by speculators who claimed an overproduction and therefore the low price was paid to the raisin growers. In the year 1919, 190,000 tons, or an increase of 500%, were produced and the entire crop was cleaned up before the end of the season, and these raisins sold at 10 cents per pound. This shows the value of intelligent co-operation and the value of advertising a product in order to create a larger demand for it.

We have pointed out many times the food value of milk and its products, the under-consumption, and that we could increase the consumption of dairy products at least 300% without asking the consumer to use more dairy products than are economical and are needed for proper nourishment. Yet the dairy interests hesitate to contribute a sufficient sum to allow our National Dairy Council or the State Dairy Councils to carry on an effective advertising campaign. The men interested in the advancement of dairying as a whole do not comprehend the value of advertising in order to create a demand for a product that will increase consumption and bring a price that will be remunerative to those who produce it. The raisin growers received 1½ cents a pound for their grapes before they formed a co-operative organization for marketing them and 35,000 tons were held up to them as being an overproduction. Through co-operative effort and proper advertising they increased the consumption of raisins from 35,000 tons per year in 1912 to 190,000 tons in 1919 and sold them at 10 cents per pound.

Dairy farmers with a food that is essential to growth and health and one that is economical should take courage in what the raisin growers have done and resolve to spend a certain percentage of their income for the advertising of their products. The dairy industry of the United States amounts to over $3,000,000,000. If the dairymen would contribute a sum for advertising their products in keeping with that contributed by the raisin growers of California they would spend nearly $300,000,000 annually. It would not require anywhere near this amount to put on an effective advertising campaign throughout the nation because the many agencies, the schools, the child's welfare associations, and the sanitary boards are more than willing to help in spreading information concerning the value of milk and its products as foods.

AN INTERVIEW—HEBE-MADE

On the dairy page of a prominent farm paper which has come to our desk today appears an advertisement of the Hebe Company entitled, "What one dairyman learned about Hebe". It contains a number of questions supposed to be asked by a dairyman in the office of the cocoanut oil substitute and answered at length by an advertising expert of the company. This Hebe-made dairyman is made to ask the very pertinent question, "Is not the real purpose of Hebe to develop a market for cocoanut fat rather than a market for skimmilk?"

The faithful cocoanut oil employee promptly replies, "Decidedly not". He states the quantity of skimmilk and cocoanut oil used in making this milk substitute and repeats the oft-made but unproved assertion that it benefits the dairy industry "by developing a human food market for skimmilk". He does not dwell on the fact that every can of this product selling from grocery store shelves destroys the market for condensed and evaporated milks—real, one hundred per cent dairy products.

This "interview" is untimely. It comes when many communities are having great difficulty in finding "a human market" for their whole milk. Many condenseries have closed their doors and others have greatly reduced the price the farmer receives. Where there is no other local market for milk than the condensery, the dairy industry is in a perilous situation.

Were a real dairyman, not Hebe-made, to visit the headquarters of the substitute, particularly if he has lost his market because his condensery cannot sell its product, much interest would be added to the "interview" advertised. The dairyman would hardly confine himself to questions; he would do some of the explaining, and in no uncertain terms. Hebe manufacturers may deceive some publishers into carrying its paid advertisements but the owner of dairy cattle, selling milk fat in competition with cocoanut oil, is a little slow to see its "benefits" to the dairy industry.

THE DAIRY SITUATION

The closing of a number of condenseries and powdered milk plants has left a considerable quantity of milk without a market. The cheese factories and condenseries, in sections occupied by condenseries, have been closed many times and in many cases the machinery has been taken away and the buildings torn down. We have pointed out the wisdom, the good business sense, for farmers to ever be in position to market their own products and the present condensed milk conditions emphasize the importance of keeping cheese factories or creameries in all dairy communities.

The tremendous demand for food during the Great World's War stimulated the condensed milk business far beyond the needs in normal times and today there are more condenseries than necessary for supplying the demand for condensed and powdered milk. In 1919 the condenseries used 4,600,000,000 lbs. of milk. This is not a large amount when we consider that we produce about 90,000,000,000 lbs. per year. It requires only a surplus, however, that depresses the price of milk to a point below the cost of production. We are inclined to the opinion that the milk from the condenseries and which will be manufactured in butter or cheese or used for direct consumption will not affect the price of dairy products materially, if at all. This, of course, means taking the country as a whole. We have a butter shortage of nearly 60,000,000 lbs. which will require nearly 1,500,000,000 lbs. milk, or 33 per cent of all the milk used last year in the manufacture of powdered and condensed milk. The shortage of cheese for the first nine months of last year was 21,500,000 lbs. and this would require approximately 215,000,000 lbs. milk. In other words, if we have at the end of the year as much butter as we had in 1919, it will require all of the milk that is used by the condenseries to produce it.

Butter is selling in New York for 59c per pound and this will return to the patron 66c to 70c per pound for butterfat, depending upon the volume of the business his creamery is doing. If butterfat is worth 66c per pound, it means the farmer will receive a return of $2.50 per 100 lbs. of milk testing 3.8 per cent. Calculating 100 lbs. of skimmilk to be worth one-half bushel of corn, this will make it worth at least 50c per 100 lbs. and 80 lbs. of skimmilk will be worth 40c. This added to $2.50 makes the return for 100 lbs. of milk testing 3.8%, taken to the creamery, worth at least $2.90.

The farmer who makes it a practice to rear his calves and raise hogs will not sustain the loss or find the difficulty in utilizing his skimmilk as the one who depends entirely upon his cows for his income. Diversified dairy farming, taking it by and large, is the safest to follow.

THE CALF INDUSTRY

In dairy states and in localities where the pure-bred bull predominates and milk is sold for direct consumption or to cheese factories, the calf industry has become important. This industry has been both satisfactory and unsatisfactory, for it gives opportunity for the unscrupulous dealers to misrepresent and often sell calves carrying but a small per cent of pure blood as being 15-16 or 31-32 pure blood. In some instances, calves inferior in development and growth have been shipped because this business, of necessity, must be carried on by mail.

In southern Wisconsin a number of men ship calves to all parts of the United States. Many of these calves are gathered in the vicinity of the shipper, but a larger number are purchased at stock yards and, therefore, a buyer has no way of determining whether a calf is one-half pure blood or fifteen-sixteenths. He knows the calf is a grade of a certain breed by its color. These calves are shipped to sections where dairy cattle are of poor breeding and are superior to the native stock. A very large majority of these heifer calves should be saved, for they are capable of giving larger returns than their dams or the average cow. In other words, these calf shippers have been rendering a service to the lairy industry nothwithstanding that some of the calves saved should be slaughtered and, in a few instances, there have been misrepresentations.

Shipping calves, only a few weeks old, long distances, is rather a trying ordeal and when they arrive at their destination the purchaser is sometimes disappointed in their appearance. They may have been without feed for two or three days; they may be gaunt, dirty, and do not measure up to what the purchaser expected. As a rule, if these calves are fed but little milk at a time for a few days, they come out of the ordeal in good shape. Some of the purchasers to satisfy the hunger of the calves have overfed them and the results have been bad. Overfeeding of young, hungry calves invariably produces scours, which is not always easy to check and sometimes proves fatal. Any calf that has been shipped by express should be fed sparingly. Give two or three pounds of milk at a feeding, not exceeding three times a day, gradually increasing the allowance as the calf's condition will permit.

While there have been misrepresentations of calves by the sellers and improper handling by the purchasers, both of which have caused disappointment and contention, yet the shipping of grade

calves from dairy sections to various parts of the United States has been beneficial to the dairy industry.

On the third page of this issue will be found an article entitled "The Whitewater Calf Industry", discussing the subject of selling calves by mail.

Silage and Cheese

We have a cheese factory operator who is absolutely opposed to feeding silage to dairy cows where the product is used for the manufacture of cheese. The writer believes there is some other cause for the objection which he cites and blames it upon silage and believes it to be due to bacteria.

He calls our attention to conditions which he claims exist in Green County, Wisconsin, where he says the cheese maintained its quality to a certain point and then broke down; that when silage was discarded as a feed the trouble corrected itself. We would like to know all the facts regarding conditions in Green County.

Portland, Ore. W. I. S.

The claim that good cheese cannot be made from milk produced by cows fed on silage is without foundation in fact. We can readily recognize that if the silage is of poor quality, that it may taint the milk and so render it unfit for making cheese or any other dairy product. However, this condition does not ordinarily exist. Where it does, it can be provided against by proper cleanliness in the barn and the feeding of strong smelling silage after milking rather than before.

Green County, Wisconsin, is still making a good quality of cheese and the poor cheese that is made cannot be laid to the feeding of silage. There are many causes for poor quality cheese, but the primary occasion is the failure of the cheesemaker to properly make his product or the fact that the producer has not exercised care in producing clean milk.

According to the report of the State Department of Agriculture, there were nearly 1,600 silos in use in Green County last year and some 23,000 acres of corn were placed in these silos. As Green County has 47,000 milch cows, this would indicate one silo for every thirty cows within the county. Indeed, we find that the entire county is credited with something less than 2,400 farms, which would indicate that better than two farms out of three have silos. As cheese is the most important dairy product produced in Green County, the very natural assumption would be that a large majority of the farms producing milk for cheese factories are feeding silage to their cattle. Indeed, we feel quite safe in asserting that there is not a cheese factory in Green County that does not receive milk from a relatively large number of silage fed cows.

In reinforcement of the above we call attention to an article in this issue by J. L. Sammis, entitled, "Cheese from Silage Fed Cows". Professor Sammis is in charge of cheese work for the Wisconsin College of Agriculture and speaks with authority.

Dairying on Eight Acres

HOARD'S DAIRYMAN:—W. B. of Ohio writes that cream is paying him better than whole milk. I have no dispute with him on the subject, but unless he is able and exercises extreme care, he cannot make the use of skimmilk pay at the present prices of whole milk. We do gardening and dairying and until recently we churned and sold the butter, putting it up in pound prints and for which we received 70c a pound. We sold buttermilk at 25c to 30c a gallon and sold our cottage cheese for 25c a pound. We have changed this practice and are now selling our milk at 50c a gallon which we consider will bring us a larger return.

I live on a small farm of only 8½ acres. We keep 4 cows, 2 heifers, a sow, and 8 pigs, and during the course of a year handle from 200 to 600 rabbits, 100 to 200 chickens, and 50 to 60 ducks. In two years and a half we have made the larger share of what our farm cost us and for which we were offered $7,000 last October, since which time we have added $1,000 in improvements. Hard work on the part of my wife and myself has made this possible. We had to practice economy and we sought to do everything that would make an honest dollar, even to huckstering everything raised and made on the place. Quality and a fair price, together with cleanliness, has been our motto.

Delaware, O. L. F.

Oiling Farm Harness

HOARD'S DAIRYMAN:—Every so often I read an article in some farm paper about the proper way to oil a farmer's team harness. Each strap must be taken apart, correctly washed, dried, greased in a certain direction, and then dried some more. As a result I wonder how many farm team harnesses are greased or oiled at all. I know of very few. I also know that mine wouldn't get it very often if I had to make a job out of it like this.

I'll tell you the way I've learned to oil the farm harness and get it done about once a year. Very likely it should be done more often than that but I'll venture to write that not one harness in five gets greasing in two years so far as I observe among my neighbors. In fact, I see harnesses every day that have never been oiled and probably never will be.

So, instead of taking the harness all apart, I take the straps out of the keepers, move the buckles into a new notch, remove the lines and traces, scrape off and brush off all the dirt I can and proceed to give the harness an oil bath. I do this by having the oil in a tin can of about a half pint size—not in a saucer that is slopping over and upset easily. I use a two-inch brush for greasing. It beats an oily rag all to pieces I think, because it will get into the cracks and narrow places where there happens to be a seam of some sort. All harnesses have such places and they ought to be reached. Just as with a farmer's work shoe the wearing out place is between the sole and the upper, the wearing out place of a harness is where oil and grease can't get to it. So I like to give the hard places the most attention. It is easy to oil a trace on the flat sides but getting in the layers of leather on the edges takes a little time. Oil should be there just the same.

Some straps on a farm harness can be reversed when the oiling is done. This makes the wear come in a different place and also prevents cracking as would happen if a strap is always pulled the same way. Belly bands and throat latches are straps of this sort that can be reversed.

Oil will readily soak into some straps and remain on the surface of others for some time. Leave it for a few hours and then wipe it off if it is a collar or any part touching the horse.

If one wants to do a little better looking job, get some black enamel and go over the iron parts of the harness. This enamel soon dries and makes a neat looking job.

Probably no part of a harness goes faster than the traces and lines. One can oil these parts more often than the whole harness. I have oiled the traces of my harness twice in the last six months. It keeps life in them and they stand the hardest strains.

A neighbor has another way of getting some oil on the harnesses he uses. He has a dish of oil near the harness. In it is a cloth soaked with oil. He frequently oils a tug or a line at a time. In the course of time he gets over the whole harness. It is a dirtier job than with a brush but it gets done and that is what counts with most of us. Harness leather is so high now and hard to get—until you have a hide to sell at 10c a pound—that it behooves us to save the $10 traces that we have as much as possible. One can hardly touch a new farm harness for less than $125 if it has any weight and that is a lot of money to save. Even the interest on that investment can be made pretty cheaply with a dish of oil once a year or oftener.

Ohio. EARL ROGERS.

Feed Grain for $3 Milk

I have a herd of fifteen Holstein cows, now freshening, each having an average milking capacity of about forty pounds. I have plenty of corn silage and clover hay, but will have to buy what grain I feed. At present prices do you figure that it will pay me to feed grain? If so, what would you advise buying and in what proportions would you feed? Am receiving $3 per cwt. for milk.

Tent, Ill. A. D. M.

These cows should give fairly satisfactory returns if they receive as much clover hay as they will consume and about 35 or 40 pounds of silage per day. However, with milk at $3 per hundred pounds, we believe it profitable to feed a grain mixture in addition to this. Considering the present unstable grain market, it is very difficult to advise which grains to purchase and when purchases should be made. Present prices on grains, it seems to us, are very favorable when milk can be sold at $3 per hundred pounds.

A very good grain mixture may be made from 300 or 400 pounds of ground corn or ground barley, 200 pounds of ground oats or bran, and 100 pounds of cottonseed meal or oil meal. A choice may be made between corn or barley and between oats or bran, choosing the feeds which can be purchased more cheaply. Choose between oil meal and cottonseed meal on a basis of the effect of these feeds in the ration—the oil meal tending to be rather laxative while cottonseed meal has the opposite effect.

It may be profitable to use other feeds in this mixture, if they can be purchased to advantage. The simple mixture suggested is one which is giving profitable results on a good many dairy farms.

Judging by Length of Tail

Kindly inform me if a cow's tail that reaches about two inches over her hocks is a sign of an extra good cow or not.

Ansonia, Conn. I. G.

Judging the productive capacity of a cow from any one point in her conformation is a very uncertain matter. There is little enough certainty when the whole conformation is considered.

In general, a long bodied cow has greater capacity than a short bodied cow; because of this she is able to handle larger amounts of feed, and, other things being equal, will likely produce more heavily. A long bodied animal has this length because of larger vertebrae, the number of vertebrae being the same in all cows.

Some judges believe that a long tailed cow is one which is apt to produce more, because the size of the vertebrae in the tail, giving it its length, indicates to a degree the size of the vertebrae of the back, which in turn give the body its length.

The Distributor in the Silo

HOARD'S DAIRYMAN:—When I began to use the distributor in filling the silo, I thought it would be all right to carry the pipe around most anywhere and let the ensilage fall out as it would. I had not used it very long, however, before I learned that there is quite a knack in doing even this simple thing as it ought to be done. And this is my way now of using this newly acquired helper.

Beginning at one side of the silo, I let the corn fall to the thickness of several inches. About five or six, as one prefers, is about right. Then drawing the pipe a little nearer to me, I take another layer close up to the first one, following the same direction across the silo. So, back and forth I travel, carrying the pipe slowly so that the ensilage may be as nearly as possible of a uniform depth and degree of compactness. In this way I keep on till I reach the other side of the silo, when I turn back and begin over again.

Two or three things are gained by this systematic use of the distributor. One of them is that we get the ensilage distributed evenly, corn ears, stalks, and leaves lying in an orderly manner, and thus preventing the mass from being lumpy, as is apt to be the case where the ensilage falls hit or miss. And then, while carrying the pipe back and forth, we tramp the ensilage already deposited down considerably, a much desired object. I found that by following this plan while the machine was running, I could get a few moments' time when the engine stopped to do extra tramping, especially around the edges. This is another thing I discovered, too. When you get near the top of the silo, it is difficult to shoot the ensilage out of the distributor clear across to the far side of the silo. By hooking on an extra length to do this part, and taking it off when filling directly under the hood, we can save some work, but even then we may have to use a fork a little while as the top comes nearer. I think the distributor saves one man in the silo.

New York. E. L. VINCENT.

Best Breed of Sheep

Please give me some advice as to which are the best or largest sheep for mutton and which are the best for wool.

Hancock, Mich. F. P.

The largest breeds of sheep are the long wools. In these classes the Lincoln ranks first in weight. The wool of all the long wool breeds is rather coarse and does not sell as high as that of the medium wool breeds. In the medium wool classes, the Oxford and Hampshire are the largest. They are a good mutton sheep as well as a good wool sheep. When wool is considered as a minor point, the Southdown is the best mutton sheep that I know of. However, if one looks for wool and leaves mutton more or less out of consideration, he should choose the fine wool breeds such as the Rambouillet, which is the largest in this class; or the Delaine or American merino. These are the best wool breeds.

The Shropshire is what we term a "dual-purpose" sheep, which shears a good marketable fleece and has also a good mutton form. This breed is the most popular in this country as well as many foreign countries.

Wis. Col. of Agr. FRANK KLEINHEINZ.

Cheese from Silage-fed Cows

J. L. SAMMIS, Wisconsin College of Agriculture

No more striking example of the spread of a new idea and the reversal of former opinions can be found than has occurred with reference to the silo and the use of silage.

What farmer of today cannot remember the first silo put up in his vicinity? How the neighbors laughed and jeered at the "young fool" or the "old fool" who was erecting it. It was sure to blow down, if not to fall or burst when filled. And what cows could eat the sour stuff taken out of it? Why, it would destroy their teeth, corrode their stomachs, make them give sour milk, and probably kill the whole herd in a season or two. And so on, for several years.

Today, it is the man who has no silo who attracts the attention of his neighbors and their derision or pity. He who had one silo two years ago, now wants to build another or has already done so. And the new silos are built of the most enduring materials, solid concrete, concrete staves, concrete blocks, burnt clay tile, stone, etc., as if to last far beyond the builder's lifetime. The widespread and practically unanimous approval which farmers have bestowed upon the silo and on silage as a feed leaves no more room for the old time condemnation which was opened upon it.

In the early days, too, the cheesemakers added their opposition to the use of silage, and declared that good cheese could not be made from silage-fed milk. The issue became particularly sharp in those districts where Swiss cheese was made, since this cheese is known to require the sweetest and best milk supply obtainable. The use of silage by any farmer hauling milk to a factory was held to be sufficient to ruin the factory output of cheese. All sorts of faults in cheese were blamed on the feeding of silage. Whether the cheese was bloated (too open) or blind (not open at all) the silage was held to be the cause. Cheese full of pin holes or gas holes, so as to resemble a sieve or a sponge when cut, as well as cheese that were short, dry, and mealy in texture, faded in color, and acid in flavor were all supposed to be due to silage feeding. The one universal remedy for all or most of the cheesemaker's troubles was supposed by many to be the banishment of silos and silage from the dairy farms.

On the other hand, the farmers supplying milk to the cheese factories were delighted with the way the milk flow could be maintained throughout the hot, dry season by feeding silage, and were pleased with the way the cattle relish the flavor of silage and the freedom with which they eat it. They declared emphatically at the annual convention of the Southern Wisconsin Cheesemakers' and Dairymen's Association that if the cheesemaker could not use silage-fed milk for cheese, then the farmers would have to sell their milk elsewhere, because, as they put it "The silos have come to stay." Faced with this ultimatum, the cheesemakers in comparing notes among themselves found that some of the factories while yet using large amounts of silage-fed milk were yet not having the cheese troubles of which other cheesemakers complained.

A series of Swiss cheese making experiments at the Wisconsin Experiment Station, early in the spring, using milk from a large herd of cows fed large quantities of silage daily, but without pasture, showed that from such milk, handled in a cleanly manner, the cheese were not bloated or gassy in the least. This discredited the popular notion that the regular use of silage was the common cause of gassy cheese throughout Green County and Southern Wisconsin.

Investigations at certain factories where the troubles from bloated cheese and other faults were at the worst, so that the factory would soon be obliged to close, showed that the cause of this trouble lay in a filthy whey tank or other local conditions, and that as soon as the whey tank was cleaned daily, and the whey in the tank scalded daily by running in steam, the troubles ceased, although the patrons continued to feed silage as they previously had done. Several such cases went far to dispel doubts in the minds of farmers and makers as to the suitability of silage for feeding cows furnishing milk to cheese factories.

Throughout the northern and central part of the state of Wisconsin, American cheesemakers by thousands at first took the same stand as their brother makers of Swiss cheese in Green County, but now nothing more is heard in opposition to the use of the silo on the dairy farm except where improper methods of curing or feeding silage were practiced.

There are now 71,000 silos in use in Wisconsin and hundreds more are being erected as fast as the work can be done, testifying to the permanent value of the silo for the dairy farmers and the secure place it has won in their minds as an essential for the most complete success on the dairy farm. No doubt there will be found, here and there, cheesemakers and others who are yet prejudiced against the use of silage-fed milk for cheesemaking purposes, just as there are yet some remaining who would rather drive a horse to town than an automobile or pump water for stock by hand on a hot day rather than use a gasoline engine. Yet, a few such individuals should not blind the intelligent young farmer to the general opinion of thousands, based on years of successful use of silage and the silo.

Passing through similar stages of slow advancement toward the position of universal acceptance is the "milking machine" idea, the "cow testing" idea, and other less generally understood propositions.

THE FARMER IN POLITICS

A Brief Outline of Pending Legislation of Special Interest to the Farmer

Compiled by GRAY SILVER, Washington Representative of the American Farm Bureau Federation

THE Capper-Volstead Bill, designed to remove all doubt as to the legal right of agricultural producers to market their products co-operatively, authorizes the organization and operation of co-operative buying and selling groups and leaves the question of possible combinations in undue restraint of trade and enhancement of prices to the secretary of agriculture to consider in each specific case. Upon complaint by the secretary of agriculture in any particular case the question may be brought before the courts for final adjustment.

⚜

The Kenyon-Anderson Bill provides for the creation of a commission which shall regulate the operations of meat packers through a system of licensing. Under this arrangement the handling of stock yards, refrigerator cars, market reports, and all other features of the packing business would be under constant supervision and inspection by employees of the commission and all unfair practices readily discovered. The rulings of the commission could be enforced under penalty of loss of license to operate.

⚜

The French Truth-in-Fabric Bill would require manufacturers of woolen fabrics to honestly label their products in such a way as to show the final consumer the percentage of wool and the percentage of shoddy used. This could be accomplished by weaving or stamping the figures upon the selvage.

At present most of our so-called "all wool" is from 30 to 70 per cent shoddy or "used" wool recovered from the rag bag and the dump. The consumer can not tell the difference between cloth of this kind and cloth made from virgin wool; that is, he can not tell until the inferior wearing qualities show up, and then it is too late.

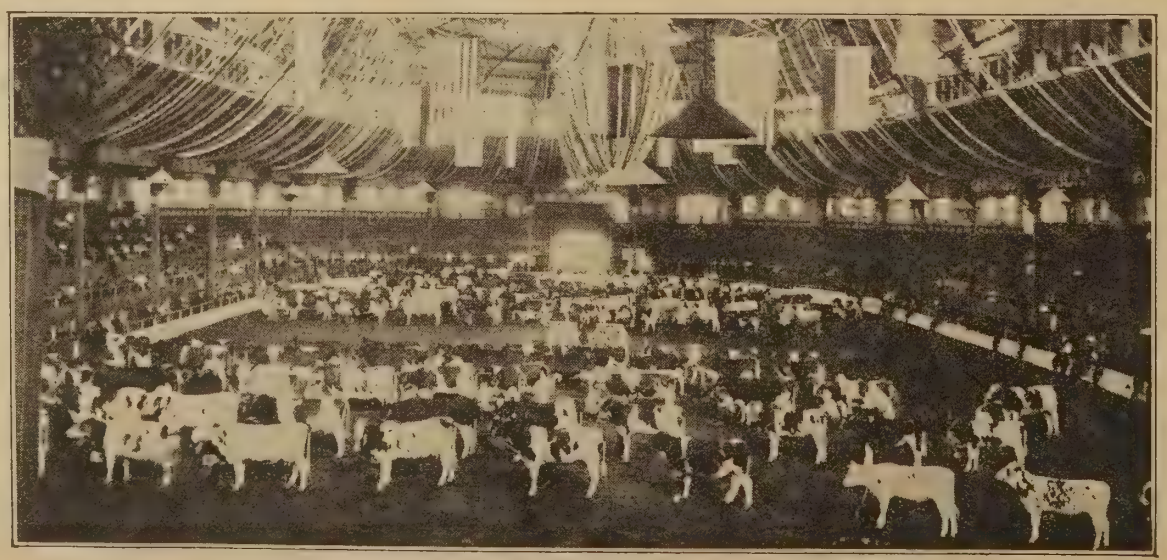
The saving in cost of materials due to utilization of shoddy is almost never reflected in the price of the finished garment and with a supply of virgin wool sufficient to meet all needs extensive use of shoddy is extremely poor economy. Under the labeling system provided, however, those who desired to sell or purchase shoddy garments could do so with full knowledge of their transaction.

⚜

Standard Containers (Vestal Bill) is a bill to standardize baskets, hampers, and other containers of fruits and vegetables so as to require them to conform to well known and easily recognized sizes and shapes, thereby eliminating confusion and fraud.

⚜

The Kahn-Wadsworth Bill authorizes the government to operate the air fixation nitrate plant at Muscle Shoals, Alabama, for the production of nitrate for fertilizer. This plant, erected at tremendous expense, is capable of producing large quantities of a very high grade fertilizer and on a cost basis which should materially lower commercial fertilizer costs.



Proper operation of this plant should prove a very effective means of decreasing the cost of production of our important food crops.

There is no good excuse for the continued idleness of this plant, and congress should authorize its operation and extension without further costly delay.

⚜

The Nolan Bill is drafted and backed by labor and manufacturing interests and designed to shift a much larger share of the tax burden on the shoulders of the farmer. The bill provides a flat tax of one per cent (in addition to all other taxes) upon all land values in excess of $10,000, excluding, however, the value of all buildings thereon.

Usually but a very small proportion of the production capital of a manufacturing plant or business establishment is in land. Consequently, the manufacturer and the business man would be largely exempted. The farmer, on the other hand, has the major portion of his business capital in land and would be taxed heavily. This bill proposes to tax the farmer on his principal tool of production —the very thing which

MINNESOTA COUNTY HERDS EXHIBITED AT MINNESOTA STATE FAIR

the factory owner and the merchant ask be exempted in their case. This bill must be defeated.

⚜

A German Credit Bill. (Smith Bill). Congress will be asked to grant a credit to Germany approximately equal in amount to the funds now held in this country as the proceeds, less certain claims, of the sales of the Alien Property Custodian. This fund, amounting to upwards of a billion dollars, must eventually be turned over to Germany. Now is the time that Germany needs raw materials with which to operate her mills and supply her population with clothing and other necessities. With large surpluses of such agricultural products as coarse wool, cotton, and hides on hand in this country, the natural and usual market for these commodities in Central Europe should be opened without further delay. Arranging the credit outlined would furnish a much needed market for the surplus products mentioned and would not increase our foreign loans.

⚜

The Townsend Highway Bill. Farmers favor a national road policy which will provide farm-to-market roads rather than "through" roads designed principally for long distance hauling and touring. The present Federal Aid System, involving the 50-50 principle whereby the government stimulates road building by matching state and local funds, is believed to be better suited to meet the road building needs of the country as a whole than is the "through" road plan proposed in the Townsend Bill. Due provision must be made, however, for "through" roads in undeveloped sections.

Coast-to-coast and city-to-city roads are well enough, but our road building efforts should not be concentrated on these to the exclusion or reduction of farm-to-market roads.

⚜

Farm Financing Measures. The Federal Farm Loan Act must be strengthened and extended. All question of the constitutionality of the tax exemption feature must be removed. Municipal bonds to the extent of some eighteen billions of dollars have been and are being issued for the purpose of bringing labor saving devices and comfort making equipment to the city home; the same principle must stand unquestioned when applied to the rural home.

⚜

The Federal Reserve Act must be amended so as to permit of freer and more direct access to the benefits of the Act by producers of agricultural products. It must be rendered as practicable and as easy for a farmer to secure a loan on a granary full of wheat as it now is for the miller to get money on a warehouse full of flour.

A Rural Credits Bill embodying the necessary features to provide operating funds to worthy farmer borrowers not having ordinary commercial banking credit must be provided.

⚜

Taxation of Profits vs. Taxation of Capital. In anticipated tax revision measures the farmer demands that the principle of taxation of profits and income rather than the taxation and consequent reduction of production capital be observed. Any attempts to eliminate the excess profits tax and place the burden on weaker shoulders must be opposed.

⚜

Tariff Policies. The farmer demands compensatory privileges, either through tariffs or basic trade provisions, as a protection against the agricultural competition of countries having a standard of living not on par with our own, and as an equalizing offset to the greatest benefits constantly enjoyed by the industrial world by reason of extensive tariff protection.

⚜

Support of U. S. Department of Agriculture. Believing the U. S. Department of Agriculture to be a highly essential factor in the development of American agriculture and that the products and benefits of its labors will be shared by all, the farmer insists that adequate financial support be provided for this, the only important producing department of the government. Any attempt to curtail appropriations which result in reduced efficiency of the department are especially decried.

Kelly Caterpillars Save Repair Bills

A truck in the repair shop is a double expense. Not only does it fail to bring in an income but it causes an outlay for repairs.

Probably the one thing that more than anything else makes truck repairs necessary is road shock.

Eliminate road shock and your repair bills would almost vanish.

Caterpillars cannot entirely eliminate road shock but they CAN and DO minimize its effect on the truck because of their greater volume of rubber and patented construction.

Fleet after fleet has been equipped with Caterpillars after the owner has tested them out on one truck.

Doesn't that suggest something to you?

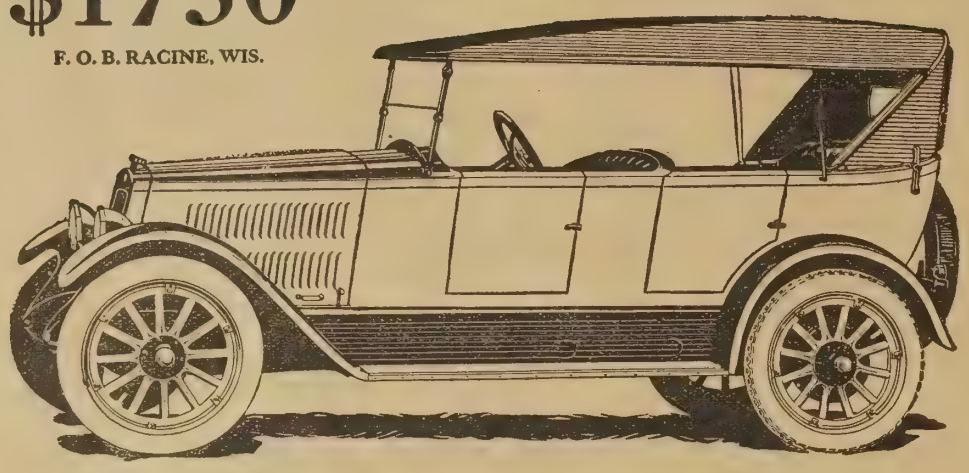
Home-made Loose Leaf Scrap Books

HOARD'S DAIRYMAN:—Every dairyman comes across many useful bits of information pertaining to his business that he would like to preserve for future reference. It may be a formula for a balanced ration, the production record of some famous cow, the directions for making an improved feed chute, or any one of a thousand other useful things. However, but few do keep such information because of the labor and cumbersomeness of old methods.

The writer has found a very cheap and efficient method of filing information of this character by the use of loose leaf books. The chief value of loose leaf books is that the leaves may be shifted from one place to another easily and rapidly.

When loose leaf books are bought from the stationer, the covers are expensive and the fillers, being made of high-grade paper, also cost considerable. By the writer's method, a loose-leaf book of a hundred leaves can be made for a quarter. Buy 500 sheets of cheap yellow paper—the kind used for making carbon copies. This will cost from 40 to 80 cents. At the stationers' or ten-cent store paper clips can be bought for five cents each. I do not mean the little wire clips that are used by stenographers to fasten an enclosure to a letter. These clips I use for loose-leaf scrap books snap together with a spring; two little projecting metal pieces at the back when pressed together open the mouth of the clip and allow the leaves to be inserted. The leaves in this book can be shifted more quickly than in the purchased article.

Get some good library paste, and paste your clippings to the yellow sheets. It is not necessary to daub the clippings all over with paste; spread the paste thinly down the center of the clipping. If the clipping is longer than the yellow sheet, double it back on itself with a double fold, leaving the title showing plainly.



Put clippings relating to the same subject on the same sheets and keep all sheets of one subject together. Then, when you are in a hurry to find certain information, no time need be wasted as you will know just where to look. If one book becomes full, separate the subjects by making two books. Keep on doing this and in the end you will have a whole book on each subject. It is surprising how much information one will find that he wishes to preserve when once he has learned how easy it is by this method.

Michigan. HARRY L. SPOONER.

Worry is the mental rat in the corncrib of life.

$1750

Mitchell

Seats Six Comfortably

A roomier, easier riding car

Here is a much roomier touring car at a five-passenger price. A car that defies comparison. A car that you can count its advantages. A car that shows you instantly a generous policy.

Every New Mitchell model brings the utmost for your money. There are countless examples of added values.

Designed for personal enjoyment

Take roominess and comfort, for instance. It is an item where there is much skimping. But examine the New Mitchell. Ride in one—note the easy riding—the easy steering.

The Roadster seats *three* instead of two, the Sedan seats *six* instead of five, the Coupe seats *four* instead of three. And so it goes, throughout the cars. Each offers extras.

Completely Mitchell built

The same generosity that distinguishes the bodies is to be found in the chassis. We build these cars complete—so we save the profits that would otherwise go to outside builders. That accounts for the extras.

Examine the offerings at the Mitchell prices: *Six* passenger Touring Car, $1750; *six* passenger Sedan, $2900; *four* passenger Coupe, $2800; *three* passenger Roadster, $1750. F. o. b. Racine Wis.

You can't find a car that offers so much. So visit a Mitchell dealer at once.

Ohio Holstein Breeders go Visiting

HOARD'S DAIRYMAN:—On Thursday, September 16th, a party of Ottawa County, Ohio, Holstein breeders made a tour of Lucas County for the purpose of visiting some of their fellow Holstein breeders. The first stop was made at the farm of W. B. Woods & Son where Mr. Norton Woods emphasized to the visitors the importance of testing and showed that the returns were far in excess of the cost. A short time after the party left, Mr. Woods received a check from a New Hampshire man for $400 in payment for a calf that was bought entirely on the record of the dam and the dam's sister. Mr. Woods told the visitors that they did not have a cow over two years of age that did not have a record of better than 10,000 lbs. of milk. One cow in the Woods' herd has a 14,000-lb. milk record made at nearly 14 years of age. This cow has now on the farm three daughters, one granddaughter, and one great granddaughter.

The next farm visited was Monclova Stock Farm owned by Mr. R. E. Ansted. At this farm, as also that of Mr. George Kiefer, the visitors saw several notable animals. At the latter's place, two cows were shown that had seven-day records of 29.8 lbs. and 30 lbs. of butter respectively.

The next stop was for a basket dinner at Indian Knoll Farm owned by Harroun Bros. After looking over the herd and talking with the owners, the party listened to an excellent address by State Secretary H. C. Barker. Mr. Barker spoke of the necessity of advertising Ohio Holsteins. While the public is quite likely to think of Minnesota when Holsteins are mentioned, he said that three Ohio counties have more and better Holsteins than the entire state of Minnesota. He announced the state sale for April 19 and 20, 1921.

When stop was made at Hazeldell Farm, the owner, Mr. Keith Hoover, was just milking one of his cows that has a record of 122 lbs. milk per day and 735 lbs. in seven days. The visitors were asked to estimate the weight of the mid-day milking. The closest guess was 24½ lbs. as compared with an actual amount of 24.7 lbs. County Agent Jones, the prize winner, presented the metal sign to the Ottawa County Bull Club. This club is composed of sixteen men who own co-operatively a "33-lb." bull. The charges for service by this bull are somewhat unusual. The regular fee is $25, a dollar discount is made to farm bureau members, $4 discount to members of the Holstein-Friesian Association, and $7 discount to any of the 16 owners. There are no exceptions to these charges except in the case of a bull calf from a grade cow when the price is $10. A ten dollar payment is required in every case at time of service.

The day was pretty well gone but a few of the party went on to the farm of George Crabb and W. C. Herman, where they saw some excellent Holsteins.

Permanent Farm Homes Necessary

(Continued from page 600)

as in other classes of building, it may be used in several ways, each of which accomplishes all that could be required. So far its possibilities have scarcely been touched. This fact is due largely, however, to prejudice of some not thoroughly informed as to the material's possibilities, and also as a result of the abuse to which concrete has been subjected by many who would not fully appreciate that certain requirements or fundamentals should govern in its use.

The greatest fault of the inexperienced in using concrete is failure to recognize the distinctiveness of the material and avoid attempts at imitation. Architects everywhere are beginning to realize that concrete when rightly used is worthy of their best efforts and whereas but a few years ago the examples of concrete houses included many monstrosities, they now include some of the handsomest and most tasteful pieces of architecture in the country.

From the standpoint of economy, the most important thing in the use of concrete as monolithic construction is standardization of forms. Only recently has this been fully recognized, and that recognition of the requirement is with us as evidenced in the many so-called "form systems" or "systems of construction", of which the forms themselves are a particular feature that have been placed on the market or promoted within the past two or three years. Not all of these have been tried out and won either the distinction or oblivion that may be waiting for them. As a matter of fact, however, form construction for any building is not necessarily difficult or elaborate work. For example, form units in the shape of standard panels in a variety of sizes such as 2 by 4 feet, 2 by 6 feet, 1 by 4 feet, and 2 by 2 feet, may readily be set up, not only for building a monolithic concrete house, but for building any other monolithic concrete structure. And these or similar standardized sections represent about all of the standardization of forms that is necessary except when the construction involves a large project of some kind, where economy in form work demands repeated use of forms until their original cost has been practically wiped out.

Experienced builders know that simplicity of forms depends upon simplicity of the structural design itself; so that in designing the building, one of the thoughts that should be kept foremost in mind is simplicity of surfaces so that forms will not have to be intricate nor wasteful of lumber. Simplicity does not necessarily mean monotony because, in the competent designer's hands, a simple structure with such surface variety as depressed or raised panels may in the end really be most attractive.

Many notions prevailed a few years ago as to the lack of adaptability possessed by concrete for house construction. The general impression was that concrete buildings were damp, that concrete floors were cold, that concrete surfaces were monotonous, etc. All of these have been dispelled in the minds of persons who would permit themselves to become correctly informed.

Whether concrete be used in the form of monolithic construction, concrete block, or one of the several unit types of construction, it produces warm, dry, sanitary, fireproof homes. Monotony of surface need not be an objection if any one of several methods of securing attractive surface finish is employed during construction or after forms have been removed. Perhaps the simplest type of concrete house to build is that secured by using rough cast concrete block for walls and finishing the exterior with Portland cement stucco. Stucco itself permits of a variety of surface effects. By the use of concrete block of several standard types, it is very simple to secure hollow wall construction, which is most desirable from the standpoint of attaining insulation against extremes of outside temperature.

CITY COMFORTS FOR YOUR FARM HOME

WITH one small, simple Kewanee Plant you can have running water and electric light. The barn, the yard, the porch, the cellar can be instantly flooded with strong, steady light. The same plant at the same time will operate cream separator, churn, grindstone, vacuum cleaner, electric iron and washing machine — supply running water in your barns and in the milk house, at the garage and in the yard.

You pride yourself on your modern farming! Modernize your home with running water and electricity. Provide fire, burglar and health protection for your property and your family! The same plant does it all.

All From One Plant

No matter where you live or how old your house may be, a Kewanee System can be installed which will supply all the electric light and running water that you can use. Not a big, complicated piece of machinery. Easy to install, simple of operation, requiring very little attention.

There's a Kewanee System Built for You

Years of time and the knowledge of many skilled engineers were used to perfect these plants for modern farm conveniences. Each plant is assured satisfactory in operation because of our long experience in the building of Public Utilities.

You can get a Kewanee Lighting Plant or Water Supply System separate, or you can get the Combination Light and Water System. There are over a hundred styles to choose from. The Combination System costs only a little more than ordinary lighting systems alone, and the operating cost is low.

Kewanee Plants are built for the inexperienced man or woman to operate in out-of-the-way places, and to give a lifetime of uninterrupted service.

There is also a Kewanee Sewage Disposal System, built on the same simple plan, which gives perfect service and completes modernization of the farm home.

Swat the Scrub

(Continued from first page.)

farm, and the labor incomes of those farms averaged $430 higher than those farms where grade dairy sires were used. Evidently it pays to swat the grade dairy sire.

A survey of 300 farms in Ontario, Canada, was recently completed. Grade sires were used on 131 of these farms, pure-bred sires had been used for five years or less on 49 farms, pure-bred sires had been used from 5 to 10 years on 46 farms, and pure-bred sires had been used more than 10 years on 74 farms. For these four classes of farms in the order given, the labor incomes were as follows: $961, $1,248, $1,473, and $1,710. In the same order the average receipts per cow were $94, $117, $115, $137; and the average income over cost of feed was $18, $36, $34, and $51. Other surveys made on farms in Ontario gave similar results. So far as I know there has never been a farm survey anywhere that contradicted these figures.

Undoubtedly the dairymen who own good pure-bred dairy sires are better farmers in other ways than those that own scrub and grade sires, but that does not take from the force of the conclusion that the greater receipts per cow and the larger labor incomes are largely due to the use of better sires in the dairy herd. The use of good sires is one of the ways by which the intelligent farmer makes his farm yield returns above the average.

Every farmer should join the "Better Sires—Better Stock" campaign and help to swat all the scrub and grade sires in this country. He should do it to help his country, he should do it to help his neighborhood, he should do it to help himself. The "Better Sires—Better Stock" campaign is fully as important as any political campaign that is likely to be conducted in the next twenty years. We are all on the same side in the campaign for better live stock, but I am afraid some of us are not very active workers in the campaign.

If every owner of live stock will wake up, swat the scrub sire on his farm, and substitute a good pure-bred for the scrub; farming will become more profitable and much more interesting. The movement is started, it will grow. That day is close at hand when some county, somewhere, will eliminate every scrub sire within its boundaries and thus become a scrub-free area. When that is done other counties will follow fast and eventually whole states will become scrub-free areas. Too long has the live stock business carried the burden of the scrub sire. Which of all the live stock countries in the United States will be the first to drive the last scrub sire forever from within its boundaries?

More milk and cheese on the family bill of fare means less meat to buy and more money saved, as well as better health.

Criticism That Unites Producers

HOARD'S DAIRYMAN:—Agents of the dealers are spreading much propaganda against pooling milk. They accuse the League officers and ridicule the project. They pose as the friends of the farmers to protect them from their enemies (?) who ask them to pool and thus place all their property at the disposal of these "crafty" League leaders. They accuse them of incompetence and make untruthful statements as well as those that are half-truths—the most dangerous of lies. I heard the president of one of the manufacturing concerns say that the conference board of dealers is mad. They "have their coats off and sleeves rolled up." Then he further stated that by November first there will be no League price. That is a very strong intimation that the dealers are out for exactly what we have been saying, that is, to break up the League. It looks as though we may have only about 30,000 contracts signed and we must have 50,000. The work has now gone on only about two weeks and two more may get us the other 20,000, but it will mean hard work if we get them. November first is viewed with concern, but we are hopeful.

It is developing that the dealers in milk are out for the biggest propaganda work that has been noticed in many years, if ever. They are circuralizing their patrons and carrying advertising in local papers that must cost in the aggregate enormous sums. They are advertising in city papers in a way that is almost criminal in wastefulness to say nothing of the false understanding that they are trying to create. So far as farmers are concerned it looks to me that it is a waste of powder since it seems to be uniting them more strongly than ever. At this moment it appears to be the best way to get the pooling across that has been tried. In towns and cities we do not yet know what the result will be. If a sentiment can be created against dairymen in the cities it will tend to injure the League. Just what can be accomplished by these methods is yet a problem. New York city officials have taken at times the same position that the dealers are taking.

In one case a meeting has been held to ask the farmers to lower the price of milk for October independently of the League. They claim that they are losing money and may have to go into bankruptcy unless the price is lowered. At the same time they are spending for advertising as above mentioned. The postage on the useless circulars is something of an item for they come daily some of the time. We have been saying softly for a while that the dealers are out for a fight to break the League. It is almost time to say it with energy and then put up the right fight to get at them from our side.

I did not intend to say much about the pooling contracts now, but these are attacked in such a way that it is hard to give the right answer. I will say that there is no use in making a contract unless it contracts something. It must bind the parties. That is what the contract does and the dealers are trying to make the farmers think that these real contracts take away every man's rights to his property. The plan is called socialistic and for the purpose of defrauding dairymen in order that League officers may draw enormous salaries at the expense of dairymen. One can hardly imagine the stuff that is coming out. It is pretty shrewdly put in some cases, but that which slanders the League and farmers does not convince dairymen that its authors are of use to them in getting fair prices. No dairy farmer with any memory will admit that milk dealers are anxious to save him from disaster. It is hard to make dairymen think that dealers love the farmer, but they may induce him to think of times when they did show contempt for him.

New York. H. H. LYON.

Cheese Prices Cut

Southern Jobbers Ask Dealers to Dispose of Holdings—Trading of Hand-to-Mouth Order

[Report by U. S. Bureau of Markets]

Cheese markets seem to have taken a further downward trend during the week ending October 9. The unsettled feeling which was noted last week with reference to Wisconsin primary markets became more general and at primary markets especially the tone was close to what might be termed weak. Basic prices on practically all styles were lower when trading for the week opened, and what actual business took place was at a wider range of prices than usual. It was apparent by the middle of the week that the usual amount of orders was not forthcoming and there was a general rush to shade prices, many dealers reducing prices almost to cost, but without success.

While distributing markets did not share fully in the unsettled tone which characterized trading at country points, the fact that dealers exerted themselves to keep stocks cleared was evidence of a slight uneasiness. Business was mostly of a jobbing nature and on the whole was quiet, being mostly to regular trade for current needs. No new business or expert orders of any consequence developed; even orders from the southern trade, which has opened up within the last few weeks, were comparatively small. About the only trading which continued on a firm basis was in fancy New York State cheese, which has been in light supply.

Dealers not Optimistic

Dealers generally do not view with any degree of optimism a break occurring in October. However, various conditions have worked to bring about such a situation. The continued talk as to condenseries closing has had its influence and, although not many have actually shut down, it is reported that a number which produce the advertised brands are diverting their milk into other products. Cheese dealers do not appear to be concerned about the possibility of condenseries making cheese, for they think that such cheese would not be of finest quality, and accordingly would have but little effect on the sale of fine goods.

One of the matters of perhaps greatest concern to Wisconsin dealers is the fact that a number of southern jobbers who bought early and stored their cheese in Wisconsin are now asking dealers to take it off their hands or sell it for their account. Should this become more general, it may be the means of cutting down the consumption of cheese in those sections. There is still a difference of opinion as to what the market of the next few weeks will show, although a feeling that prices will have to come down in order to stimulate trading is prevalent. Holders of heavy stocks, however, in order to protect their own interests, do not generally view such a development favorably.

The average wholesale prices on American cheese, style Twins, for the week ending October 9, were as follows: New York, 28 cents; Chicago, 26.2 cents; Boston, 29.8 cents; San Francisco, 30.9 cents; and the Wisconsin primary market, 26.3 cents. For the corresponding week last year the average prices at these markets were: 30.3c, 28c, 31.5c, 31.8c, and 27.5c, respectively. The total receipts of American cheese at these markets were 3,188,187 lbs., as compared with 3,983,114 lbs. for the corresponding week last year and 3,008,890 lbs. for last week.

Upward Trend on Butter

[Report by U. S. Bureau of Markets]

The butter market showed further advancement in terms of price as generally expressed in the quotation for 92 score butter, during the week ending October 9, but unfortunately numerous factors both bearish and bullish combined to give it also a decidedly unsettled appearance. The bearish arguments were stronger and toward the close of the week they were helped out materially by a very unsatisfactory movement of butter. The net result was a weak undertone accompanied by considerable nervousness.

The average wholesale prices on 92-score butter at five of the principal markets, for the week ending October 9, were as follows: New York, 62.9 cents; Chicago, 59.7 cents; Philadelphia, 62.1; Boston, 61.8 cents; and San Francisco, 63.7 cents. For the corresponding week last year the average prices were: 60.9c, 58.5c, 60.8c, 60.6c, and 63c respectively. The receipts of butter at these five markets were 8,243,341 lbs. as compared with 8,453,250 lbs. for the corresponding week last year and 9,012,825 lbs. for last week.

Month's Storage Report Shows Reduction

Reports issued by the Bureau of Markets, covering the October 1 holdings for the entire country, show 113,333,000 lbs. of creamery butter in storage as compared with 121,816,000 lbs. in storage last year and 87,883,000 lbs. in 1918. Last month the storage holdings were 115,546,000 lbs. According to the American Warehousemen's Association Report, which covers 56 warehouses, 80,723,000 lbs. were held in storage, as compared with 85,576,000 lbs. last year.

Current Feed and Hay Prices

Prices Decline With Large Supplies and Dull Demand

[From Reports by U. S. Bureau of Markets]

There was no change in the downward trend of the market during the week ending October 9 and practically all feeds registered lower quotations. Contrary to the policy pursued the past few years during the period of continued price advances when feeds were generally sold on a basis of replacement values, reports indicate that now dealers who are stocked up with high priced feeds are endeavoring to work off fair quantities to retail buyers at purchase prices and that others are holding them at cost values awaiting a more favorable turn of the market. Still others are closely following offerings in making their quotations.

In spite of liberal concessions the demand is described as extremely dull and trading as light and of smaller volume than during the last few weeks. Stocks of feeds at Lake ports are increasing.

While bran is offered at Minneapolis and Kansas City at $28.50 and $27, respectively, bids in the latter market are said to be $1 to $3 per ton less for that commodity. Middlings have declined to a more reasonable level, being quoted now at a small premium over bran. Offerings continue liberal, but with oats selling at 40 cents per bushel in certain sections, the country trade does not seem interested in feed that costs more. Flour middlings and other heavy wheat feeds are following the general decline, and are quoted at around $42 f. o. b. Minneapolis. Seattle and the Northwest are receiving offerings from Montana and the Dakotas and eastern bran is selling at about $42 in that market.

At Texas common points 43 per cent cottonseed meal sold at $43, while 36 per cent is quoted at $42 in Memphis. Other prices on 41 per cent meal are $50 at Kansas City, $56 at Chicago, and $58 at Boston.

Linseed meal holds close to $60, with offerings in northern territory at $52 f. o. b. mill. Quotations are: $61 at Minneapolis, $63 at Kansas City, $64 at Chicago, $57.50 at Buffalo, $59 at Boston, and $57.50 at New York.

Demand for gluten feed continues light, with another decline of $5 per ton during the week. Stocks are not heavy at the mills, although the country trade is well supplied. Quotations are: $48.75 at Chicago, $52 at Cincinnati, $53 at Pittsburg, and $57 at Boston.

Alfalfa meal holds at $30 to $36. Mixed feed manufacturers are buying little, because their business has received a serious setback within the last month and sales are difficult to make. Supplies of hominy feed are large, with offerings at $40 by wholesalers. Beet pulp declined to $43 in Los Angeles, with New York dealers quoting $50. Supplies are large and demand light. Cocoanut cake and meal are offered at $30 and $32 in San Francisco.

Light receipts of hay are noted, with prices remaining firm. No. 1 timothy is quoted at $32 in Seattle, $27 in Minneapolis, $34 in Chicago, $40 in Boston, and $39 in New York. Mixed clover and timothy ranges from $22.50 in Minneapolis to $33 in New York, with straight clover at approximately one dollar less.

No. 1 alfalfa is quoted at $23 in Kansas City, Omaha, and Seattle, at $28.50 in Minneapolis, $31 in Memphis, $37 in Atlanta, and $30 in Cincinnati.

Wisconsin State Guernsey Sale

A more than usual representative gathering attended the Second State Sale of Wisconsin Guernseys. Wisconsin breeders were successful in retaining the larger number of animals, but they had to meet competition from Connecticut, Virginia, Minnesota, and Iowa, twenty-five animals going outside the state. A total of $33,840 was received for the eighty animals sold, making an average of $423 each. While this is $150 less than a year ago, it is accounted for by present conditions that make for a buyer's market and the range in quality of the animals sold. There were only six animals sold for over $750.

A nine-year-old bull, Bell Buoy of Linda Vista, brought the high price of the sale at $1,775. He has 15 A. R. daughters, is a splendid representative of the Guernsey breed, and is of excellent pedigree. He is out of Easton Belle with 500 lbs. fat and two A. R. daughters and is by Jethro's May King of Linda Vista. His sire is a double grandson of Imp. King of the May and a grandson of Dolly Bloom, while his dam is a granddaughter of Imp. King of the May and of Dolly Bloom of Langwater. It is a good omen when an aged sire with producing daughters will top a sale. He was consigned by O. R. Schwalen and was struck off to a trio of Wisconsin breeders consisting of G. W. Sankey, W. W. Pace, and Matt Brunner, with the University of Wisconsin and Harry Lewis as final contending bidders. Fruit Brothers two-year-old bull was second in price, go-

ing to Geo. M. Hendee of Connecticut for $1,100.

The third animal in price was Damsel of Linwood, a senior yearling heifer out of Imp. Fanny of Linwood with 752 lbs. fat in class AA and by a son of Imp. Clara's Sequel with 32 A. R. daughters. She was exceptionally well grown and in every way a good representative of the large, vigorous Guernsey without coarseness. She was consigned by Dale Rundell and was purchased by Chas. Brooks of Minnesota with Harry Lewis of Wisconsin as runner-up.

Following is a list of the animals sold, together with their prices and names of persons by whom purchased:

University of Wisconsin	
Elsir of Glenburine	$600
Lady Hambro of Alfalfa	490
L. A. Yaeger, Minnesota	
Allenwood Elsie 2nd	$575
McKerrow's Ultra Queen	425
A. F. Drackley, Wisconsin	
Raymonds Princess	$460
Fern's Rilma	410
W. D. James, Wisconsin	
Esther's Lassie	$410
Hayes Rosie's May Queen	700
Marquinetta of Breezy Hill	575
H. J. Schmidt, Iowa	
Dairymaid's Cream Cup of Fox Valley	$410
Theresa's Maid of Oakland	500
L. A. Page, Minnesota	
Lassie of Hawthorne Farm	$460
Wm. L. Breitrick, Wisconsin	
Primrose's Fantine	$510
St. Croix Olive	420
Geo. E. Richardson, Minnesota	
Belle of Forest Lodge	$660
Geo. M. Hendee, Connecticut	
Lady's Rex of Maple Hill	$1,100
McKerrow's Ultra Jane	500
Ada's Alfreda of Snow White	400
Belle of Waldwic	600
R. W. Ross, Wisconsin	
Lamont of Maple Hill	$700
Belle Corbin of Lake View	455
Dr. F. L. Wade, Wisconsin	
Queen Bess of Grahamdale	$430
D. F. Clark, Wisconsin	
Maiden of Homestead	$450
Harry Lewis, Wisconsin	
Craigmoor's Galaxy's Daisy Moon	$460
Miriam's Marcella of City View	925
Miriam's Rosella of City View	750
Geo. D. Lawson, Wisconsin	
Verandess of Ulao Dale	$425
Fox & Kingston, Wisconsin	
Aviator of Edgemoor	$800
Rudisell Bros., Wisconsin	
Della of Excelsior Farm	$435
T. C. Norman, Minnesota	
Oakland Lass	$450
Chas. Brooks, Minnesota	
Damsel of Linwood	$1,025
Sankey, Pace, & Brunner, Wisconsin	
Bell Buoy of Linda Vista	$1775
John Stallman, Wisconsin	
Lucy of Loberg Glen	$450
Chas. E. Wirt, Minnesota	
Peacock's Princess of Denton Farm	$460
McKerrow Farms, Wisconsin	
Sir Rosewood's Beauty	$400

New York Dairy Notes

HOARD'S DAIRYMAN:—At a recent meeting of representative members of the Dairymen's league at Frankfort, it was voted to purchase the Borden condensery plant at that place.

Holstein breeders from 11 counties held a conference in Syracuse, Oct. 6, to awaken interest in the annual sale of the New York Holstein-Freisian Association which will be held in Rochester, January 11 and 12. Farm bureau officials of the various counties have also been invited to attend. Many such meetings are being held throughout the state to arouse interest in the coming sale and promote the Holstein club formations.

The club offers a prize of $350 to the best Holstein exhibit at the sale by a county organization. It is believed that this prize will furnish an incentive for showing some high grade county groups.

Patrons delivering milk to the local plant of the Mohawk Condensed Milk Company at St. Johnsville on the butter making proposition through which it is understood the dairymen receive the proceeds of the sales less 10 per cent for manufacture, seem to be very well satisfied with the plan. The second day one company operated its new machinery the production from approximately 4,000 quarts of milk was 356 pounds of butter.

Figured at the present market price of creamery butter this gives producers a good price for their milk and they received the resultant skimmilk. With hogs to feed, it is easily worth, farmers say, $1.25 per hundred to them. The skimmed milk is all taken from the plants, some of the farmers feeding it to their cows and poultry. It has been demonstrated by experts in feeding, that its use in this manner is attended by excellent results greatly increasing the milk rate when fed to cows, and increasing egg production when given to the hens. Nearly every New York dairyman has from one hundred to several hundred hens. With eggs now selling for 84 to 95 cents a dozen, it is a paying proposition to increase the egg production.

New York. E. M. L. BLANCHER.

GOOD WILL TRIUMPHANT UNDER TEST

As this message is being written, Dodge Brothers' daily, weekly and monthly production, is at the highest point in its history.

The most casual sort of inquiry will satisfy you that this production is being absorbed as it is delivered.

Within sight and sound as we write, a great addition to Dodge Brothers' immense works, is being rushed to completion.

The interesting thing about this situation is, that it is not likely that a half a hundred people have ever bought Dodge Brothers Motor Car just because they wanted a motor car.

Of the more than half a million who have bought it—the overwhelming majority did so because of the name it bore.

It has always been treated, by the American people in particular, as an exception — always set apart, and singled out, and never judged by ordinary standards.

It has always been thought of, and is still thought of, first, and foremost, and all the time, only in terms of its goodness, and the results it gives.

All of this is wonderful, in one way, and quite natural and logical in another.

It all dates back to the day when John and Horace Dodge conceived and designed and finally built the car —after warning each other, and their associates, not even to think of it in any other terms than the best obtainable value.

They began with a few almost absurdly simple principles, bluntly expressed and rigidly executed, about decency and honor and integrity—such as most of us wrote in our copy books at school.

They reduced these old copy book maxims to a splendid and scientific system, pouring more, and more, and still more value into the car, and then marshalling all the resources of modern massed manufacture to get their product into the hands of the people at an honorable and an honest cost.

These policies and principles have never been changed, and never will be changed, by so much as a hair's breadth; and they have come to be recognized and accepted as Dodge Brothers principles wherever motor cars are driven.

It has all happened as John and Horace Dodge planned it—quite simply, naturally, and automatically, all over America, and all over the world.

People *do* discriminate, as Dodge Brothers contended they would; people *will* find out when a motor car is well built and gives good service and great good value.

Dodge Brothers market today is where they planned to locate and establish it—in the mind and the heart of every man and woman who admires good work, well done.

It will last, and it will keep on growing, as it has kept on growing for five years (faster than Dodge Brothers works could keep pace with it), as long as the number of those who believe that a manufacturer should build to serve and not merely to sell, continues to increase.

All is well with Dodge Brothers today, because John and Horace Dodge builded well in the beginning, and because their business will continue to build well until the end.

DODGE BROTHERS, DETROIT

Potato Date Changed

For important and unusual reasons the date of the Wisconsin Potato Exposition has been changed to November 30—December 4, 1920.

J. G. MILWARD, Sec.

A Progressive Community

Thirty-four per cent of all the cattle in the town of Promfret, Windsor County, Vermont, are registered, and 95% of the registered cattle belong to the Jersey breed. These interesting facts wre brought out in a survey taken by the Windsor County Farm Bureau. They found that there was, on April 1st, 1920, a total of 1,527 head of cattle of all kinds owned within the town, and 519 of these are registered. This total of 519 registered cattle, of which 46 are bulls, are found on 46 of the 89 dairy farms in the town.

This is some record surely, especially when one reflects that less than 2% of all the cattle in these United States belong in the registered class. The total figures for Windsor County show that 7% of all the cattle in the county are registered, which is also a good showing. The county farm bureau, under the leadership of the county agent, is held largely responsible for this healthy state of affairs and it affords a splendid example of dairy improvement carried out in a practical and persevering manner.—F. ABBOTTS, Windsor County Farm Bureau.

One Year Proves Its Better Qualities

In a little more than a year, the Cleveland Six has established the truth of its better qualities by its daily service to nearly twenty thousand owners. Today it is recognized everywhere for what it really is—an exceptional car, offering character and quality not found in other cars of similar size and price. It has made good in a big way.

The Cleveland, built in a great modern factory and built by an organization skilled in the building of fine cars, is featured by the performance of its exclusive motor, most highly refined of the overhead-valve type, quiet, powerful, pliant and economical.

A motor that starts instantly in even the coldest weather. The chassis construction is sturdy throughout, with long underslung springs, positive brakes and unusual ease of control.

Four attractive styles of body are mounted on the Cleveland chassis.

Touring Car (Five Passengers) $1435 Roadster (Three Passengers) $1435
Sedan (Five Passengers) $2445 Coupe (Four Passengers) $2345
(Prices F. O. B. Cleveland)

There are Cleveland Six dealers in more than 2000 cities and towns. There is one where you live or nearby. Arrange to see the Cleveland. Catalogue mailed on request.

Adventures in Community Team Work

(Continued from page 599)

of eight dollars per ton. This was the problem that confronted the farm bureau.

The committeeman who was placed on this project said he was glad to be selected for this work, which he believed was causing one of the greatest losses to the farmers there. Here is the result of his work to date: He met with the board of directors of the successful co-operative store there and put up his proposition to them. They were farmers and they caught a glimpse of the light. They are seriously investigating the matter of their co-operative store building a warehouse, equipped with a feed mill and poultry feed mixer. They have been to their banker and he will back them. They are all in favor of it and we are looking for some real results from this branch of farm bureau work that will make the work a great asset in the community.

Fruit Man Busy

The man who has also a big job is the horticultural leader. He is pooling the fruit on the island this summer and he has received some attractive offers for cherries, prunes, and pears. He is signing up the cherry crop in the following manner:

Agreement: I agree to market entire crop of cherries of the varieties listed below through the Horticultural Project Leader of the Orcas Island Farm Bureau; such fruit prepared for market in accordance with the directions of the project leader.

I expect to harvest cherries as follows:

Royal Anne ———lbs.
Napoleon Biggareau ——— "
Black Republican ——— "

I expect to harvest other varieties as follows:

——————— ——— "
——————— ——— "

Signed: ———————

The canners are paying more for the fruit in large quantities than where they have to pick it up in small lots. The fruit will be delivered at two different points on the island in boxes furnished by the cannery, weighed and inspected by a cannery agent.

The fertilizer demonstration was used not only on the pears but on sweet corn and potatoes. Combinations of nitrate of soda, superphosphate, and beet char potash were made up and measured out with extreme exactness. Definite account of all fertilizers used and crops harvested are being kept through the project leader.

Game Becoming Pests

In most sections of the country we have game commissions fighting hard to protect our game birds by laws and watchful alertness, but the farmers on Orcas Island have a different viewpoint on the matter. During one of their interesting meetings the matter of having the season opened on deer and extended on Chinese pheasants was brought up. It seems that they both have become pests, and in fact one of the men present said he saw ten deer in one group when coming to the meeting. The matter was taken up through the bureau to the State Game Commissioner.

The women have a more important part in farm bureau work than just providing a community dinner at each meeting. They have a clothing and a millinery school scheduled for the fall under the supervision of a home demonstration agent.

Drainage Work

After the drainage project leader was appointed he immediately busied himself with arrangements for two drainage demonstrations and he asked the county agent to secure the services of the drainage specialist. Already the two demonstrations have been held with a large attendance and several drainage ditches were surveyed out at the request of certain individuals to the project leader. The farmers liked the work and felt free to ask questions.

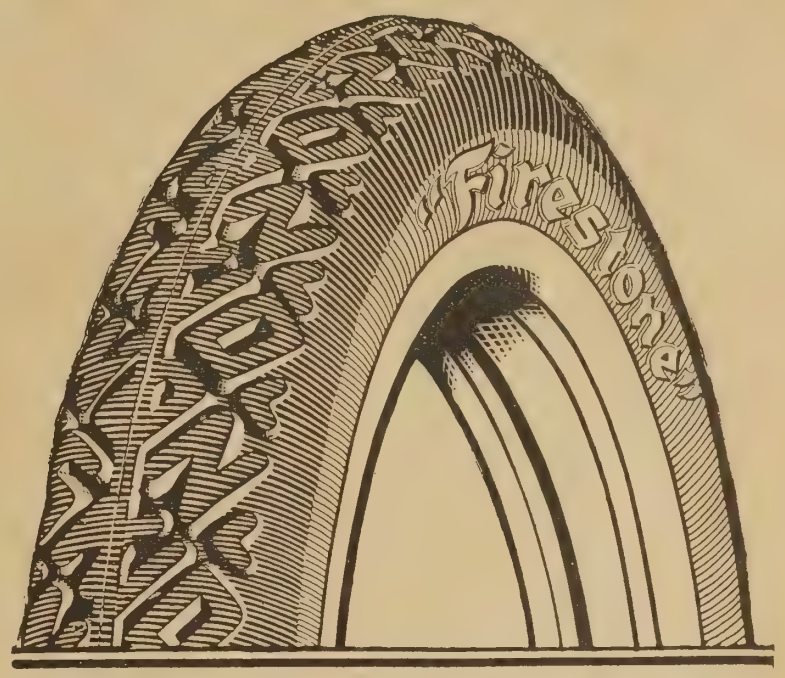
As usual a part of this year's pear crop will be boxed at the trees and shipped to New York. The farm bureau will do its share in getting the rest of the pears put up in tins and some of these may also find their way to the Atlantic Coast.

Brita of Beaver Ridge

Brita of Beaver Ridge 72382, a Guernsey cow bred by Beaver Ridge Farm, New York, and recently purchased by R. M. Lewis, Connecticut, has completed a record of 9,710.7 pounds of milk and 548.48 pounds of butterfat in class FF. She carried a calf 275 days of her testing period, and thereby qualified for fifth place in the two and one-half-year-old division.

Brita of Beaver Ridge 72382 was sired by Florham Golden Lad 18119, a son of Golden Lassie of Paxtang 24696, a cow that has records of 507.31, 675.45, and 715.38 pounds of butterfat in classes D, A, and A, respectively. The dam of Brita of Beaver Ridge 72382 is Brita of the Glen 41667, a daughter of Missy of the Glen 18390.—American Guernsey Cattle Club.

Firestone



EXTRAVAGANCE has gone by the board. Thrift is in the air. Men are buying where the value is.

The Firestone thrifty 3½ is leading the small-tire field today. Because it is built on real thrift methods from start to finish.

Firestone experts on the spot in the raw material markets of the world are able to get first choice of quality at quantity purchase prices.

Firestone men have worked out the way to produce this tire by concentrated methods —no waste material, no waste motion, no waste space.

And Firestone volume output, through thousands of dealers, permits selling at a close margin. The user gets the benefit. Try this Firestone thrifty 3½.

THE HOG MARKET

SANDERS SOSLAND, MISSOURI

WHILE corn and hogs have reversed their relative positions on the markets of the United States, dairymen should not become too eager to expand their hog raising operations. Market conditions do not justify over-enthusiasm, but favor conservative breeding and feeding of hogs in connection with dairying.

As a result of the recent sensational slump in grains, corn is now cheap in comparison with hogs. Feeders are therefore more favorably inclined toward feeding, and some dairymen who liquidated their holdings of porkers are seeking to restock their farms.

To jump from one extreme to another is not, however, profitable in the business of hog raising. During the past year, the tendency among hog raisers was to liquidate. According to the annual stock hog estimate of the Department of Agriculture, the number on farms in September was 56,534,000 head, a decrease of 5,539,000, or 8.9 per cent as compared with the fall of 1919. These figures do not warrant extreme bullishness, but furnish the basis for some encouragement. It is interesting to note in connection with the reduced supply of stock hogs that the production of corn this year is the largest in history, 3,216,000,000 bushels, an increase of 299,000,000.

"Housewives are buying meat, principally pork, in baskets, costing $8 to $10 at a time," a provision trade expert commented recently in reviewing the purchasing power of consumers at industrial centers. Abundant employment and high wages made such buying possible. It proved a powerful sustaining influence on hog markets. Changing industrial conditions are now reducing the purchasing power of labor engaged in many lines of employment. Still, a precipitous decline in the ability of labor to pay for pork and other meats is improbable. It should be remembered, however, that current conditions point to some declines. Mines, steel mills, and automobiles and textile plants are not paying out in wages as much money as a few months ago. This will tell in the retail distribution of fresh pork, ham, bacon, lard, and other hog products.

What of Europe? Next to the domestic trade, the situation in Europe in respect to purchases of pork and lard is the most vital factor in determining the influence of demand on hog markets. Europe is short of lard and pork. Germany and Austria in particular need larger supplies. In Germany distribution of lard and pork is under the control of the government, this being the result of the scantiness of supplies. Americans returning from visits to Europe confirm the reports of the scarcity of lard and pork. Europe's needs and Europe's ability to buy differ seriously, however, which is unfortunate for the American hog grower. The foreign lands of the Old World are already so burdened with war debts that their credit is low on American markets. This applies particularly to the Central powers. In addition, money has been and is still so tight in this country that it is difficult to raise the loans which Europe desires to enable her to purchase lard and pork.

Statistics of foreign business indicate that the exports of hog products from the United States for 1920 will hardly equal 50 per cent of the movement of last year. The 1919 exports were 2,600,000,000 pounds. For the first eight months of this year, according to the Department of Commerce, the exports of provisions were only 985,000,000 pounds, against 2,130,000,000 the same time in 1919. This is a decrease of about 1,145,000,000 pounds. It is equal to the product of fully 7,000,000 live hogs. If the export business the remainder of the year falls off in the same proportion as indicated by the official statistics, the outgo will be reduced by more than 7,000,000 hogs for all of 1920. Another interesting fact in connection with the export business is that the 1920 outgo promises to show a moderate increase over the pre-war average.

Before analyzing the significance of the export and the domestic markets in determining the course of hog prices, some attention must be given to the fact that the South will this year produce a larger crop of cotton seed. Crushers make cottonseed oil from that by-product of the cotton plant. This oil is used in making compound lard and is also converted into products used extensively as a substitute for lard. Cottonseed oil is worth only around 14 cents a pound today, compared with 20 cents a year ago. Offerings of other vegetable oils from Asiatic countries are reported of larger volume.

If the figures of the Department of Agriculture on stock hogs are accurate, the country will enter the winter packing season with a decrease in holdings of live hogs almost sufficient to offset the decrease in export trade in provisions this year. Besides the smaller stock hog supply, it is generally believed that there is also a decrease in the number of breeding sows on farms. In view of the reduced supply of hogs, it would appear on the surface that the outlook is brighter for producers. If export trade improves, for example, the aggregate demand in the next year will more closely approach the prospective supply on markets. Allowance must be made here, however, for the probability of reduced domestic consumption. The degree of the decrease is an unknown factor. It depends partly on the supplies of other meats, notably beef. Some allowance must also be made for the tendency of farmers to make hogs heavier in weight. Difficulty in obtaining cars to move corn resulted in the fattening of hogs to unusually heavy weights this year, but in the coming year the decreased holdings of stock hogs and the harvest of the greatest crop of corn on record will stimulate feeding.

With corn approximately 50 cents a bushel cheaper than a year ago, with deflation in money exercising a bearish influence on prices in general and with continued uncertainty over European buying, the hog feeders and breeders who are conservative in their business will prepare for lower hogs than the average of 1920. Hogs recently sold up to $18.25 at Chicago, the highest point of the year, but they have since reacted sharply from that level. Last January hogs averaged as low as $14.25 per hundredweight in Chicago. Even with the reduced supply of stock hogs, trade interests on the leading yards anticipate an even lower level between now and the close of 1920. The sharpest breaks will come when the new crop of matured spring pigs begins moving in liberal volume. This movement probably will be a little late owing to the fact that feed was so high early this year that the pigs were not fed generously.

A comparison of the yearly top prices of hogs at Chicago since 1910 emphasizes the probability of declines to a level below the recent quotations. In 1910 the top price on hogs at Chicago was $11.20. In 1911 the top was $8.30; in 1912, $9.42; 1913, $9.70; 1914, $10.20; 1915, $8.95; 1916, $11.60; 1917, $20; 1918, $20.95; 1919, $23.60; and 1920 to date, $18.25. To a large degree the shrinkage in European business in provisions has been discounted. Readjustments in American industrial conditions and the next turn in European buying are the factors making for uncertainty in hogs today. Lower, yet quite profitable, hog prices on the basis of the cost of corn may therefore be reasonably expected.

League Co-operative Association Moves to Utica

Dealers Fighting Pooling Plan

At a meeting of the directors of the Dairymen's League Co-operative Association held on Thursday, October 7th, it was voted to move the main office of the association from New York City to the city of Utica, N. Y. The executive committee of the Dairymen's League was instructed by the directors to make arrangements for the rental of sufficient office space and for enough equipment to carry on the co-operative work when the new pooling plan is operative. The directors did not vote to move the office of the Dairymen's League itself but there is little doubt that these offices will be moved in a short time, also. The main reason for the change of office of the League is the saving that can be made in conducting the business upstate instead of in New York City.

It is almost a certainty now that the pooling of proceeds of the members' milk into a common fund will soon be in operation. This will make necessary more office room than the League now has. Both the clerks and floor space in New York City are much more expensive than in the smaller up-state cities. Office rent in New York City is fast becoming almost prohibitive.

Another reason why the League headquarters is to be moved is that there have been a large number of the members who have felt for some time that the main office should be located near the center of the milk production territory instead of at the sales end in New York City. This question has been argued at some length and there are many good arguments on both sides but up to the present time a majority have believed that the best interests of the League were served by having the main office located where the largest sales were made.

The larger amount of clerical help and office room needed to carry on the increased work of the Co-operative Association business puts a different aspect on the problem, making the arguments for an up-state location overbalance those for New York City. A small sales office will still be operated in New York City as well as in some of the other larger cities in League territory.

Nothing that the League has ever done has met with more opposition from the dealers and the other opponents of the farmers than the campaign to get the members to sign the co-operative contract and the order for pooling of the proceeds. A special writer of one New York City newspaper has written several bitter attacks on the League and its policies. These attacks have been reprinted by some of the large manufacturing dealers and circulated among farmers. The dealers are also sending out an anonymous circular statement throughout League territory, bitterly condemning the co-operative plan and the policy of pooling the proceeds.

It is evident in this as on other occasions that dealers have little understanding of farmers and credit them with little intelligence, or they would realize that their bitter attacks upon the League have just the opposite effect from that which they intend.

The directors coming from all parts of League territory on October seventh estimated that there are approximately 35,000 members who had already on that date signed the co-operative contract and the order for pooling. In other words, in the few days since the beginning of the campaign the great organization was nearly 50% signed on the new basis. This is the League's answer to the milk dealers. It is well understood by the farmers that what the dealer opposes is the very thing that the farmer needs. The buyers of milk well know that with the Dairymen's League once established on its new basis the milk dealer will have lost forever his grip upon both the producers and the consumers of milk.—E. R. EASTMAN, Editor Dairymen's League News.

AYRSHIRES FOR HAWAII

One of the largest consignments for export in recent months has been shipped from Morris Plains, New Jersey. This exportation consisted of forty-four head of Ayrshire cows between the ages of two and six years. Forty head were to the order of the American Factors Limited for the Lihue Sugar Plantation, Lihue, Kauai, Hawaii, and and the other four head were for the Kileau Sugar Plantation Co. of San Francisco for their Hawaiin Plantation.

This consignment was selected and assembled by L. E. Ortiz, Superintendent of Wendover Farm. It contained individuals from Barclay Farms, Delcher Farms, James Deubler's Sons, Penshurst Farms, Strathglass Farms, Wendover Farms, and Duncraggan Farms. The shipment was billed by express to San Francisco for shipment to Honolulu. This is the second shipment of Ayrshires to Hawaii since June, the previous order consisted of fifteen head from James Deubler's Sons consigned to the Pioneer Milling Co. Ltd., Lahania, Maui.—J. G. WATSON, Secretary Ayrshire Breeders' Association.

Uncle Sam's Hired Men Who Serve You

(Continued from page 607)

destroyed by dust explosions! In the following 20 months, from October, 1917, to May, 1919, no factory or elevator, using the devices recommended by Alsberg's specialists, has had a single fire or explosion!

The Bureau of Chemistry has a little plant down on the experimental farm of the United States Department of Agriculture at Arlington, Va., that makes gas from wheat staw, cornstalks and other vegetable rubbish. This gas will heat and light a house or run a stationary gas engine. They have very little money to work with but they are hopeful that they may develop a small inexpensive gas plant which the farmer can buy and set up on his farm. If they can do this it will be possible for the farmer to use the waste vegetation from his farm to supply his house with another great city convenience—light and heat at a turn of the wrist.

I asked someone, who knows Doctor Alsberg well, just what the subject's salient characteristics were, and he said: "His love for his mother; his love for ordinary people, and his love for his work."

Washington, D. C. Weekly News

[Special to Hoard's Dairyman]

WASHINGTON, OCT. 12—The general decline in market prices of farm crops had its reaction in the butter and cheese market the past ten days. Reports to the U. S. Bureau of Markets show the loss of last week's increase in butter prices, with absolutely no reason for this loss as far as receipts or general movement is concerned. Cheese closed "barely steady" although firm and strong at the opening of the week.

The whole marketing situation is showing the influence of world movements in all commodities, which evidently mark the beginning of results from the long pressed demand from the non-producers of the world that "The High Cost of Living" must come down. Just what this ultimately means in American markets can only be guessed at. Its present results are far from satisfactory to agricultural interests in general, and are beginning to indicate similar although less serious results in the dairy industries.

Study of all available data as to world food conditions seems to indicate that the season now at its close in the northern hemisphere was an unusually favorable one. The wheat crop in sight is 19 per cent above last year, according to the best figures of the International Institute of Agriculture. Forage crops are heavier than usual. The American corn crop is one of the largest on record, and is now at maturity without having suffered a setback.

Wool and cotton figures are less certain, owing to holdover stocks, but the weight of evidence is that the supply is above the normal consumptive demand. This is not the worst of it, the world demand is far below normal because of the inability of Central Europe to buy, the turmoil in Italy and Southeastern Europe, and the Russian situation. This is a brief outline of the situation as seen by close students here.

Under these conditions, it is pointed out by experts here, dairy interests can feel well satisfied that they remain in as good a market condition as they do. This is due to two things: the lack of heavy production in dairy products, thoroughly proven by Bureau of Market figures, and the strength of the dairy organizations, especially of the milk producers. Market milk is the first line of both defense and attack in the dairy business, and the milk producers' associations are bearing the brunt of the fighting and succeeding with admirable success.

There is some reason to look for a halt in the general decline at an early date by reason of the fact that business interests, especially manufacturing and banking, are waking up to the reaction on general business sure to come from the great slump in values of farm products. This slump has already reached into the four or five billion dollar figure, taking the chief farm crops of the entire nation as the basis for figuring. This means a decline in spending power of six or eight hundred dollars per family, and this means that automobiles, pianos, furniture, farm implements, etc., will not be bought, which would have been bought if price levels had remained at the high level or shown only a gradual decline. When industry fully realizes this there may be looked for such support of the market as can be influenced through banking and speculative channels. Of course, this can not affect actual sales or actual consumption, but it will be a palliating feature, very surely.

⚜

Agricultural organizations in Washington are uniting in the farm credits conference this week. The sessions include representatives especially of cotton growers and of the southern states, where the slump in cotton prices has hit hard, and a few representatives of most of the other agricultural interests. The call was the result of a protest meeting two weeks ago in Atlanta, Ga. Dairy interests will not be represented here this week, owing to the various meetings at the Dairy Show.

⚜

Professor George L. McKay, secretary of the Creamery Butter Manufacturers' Association, was called to Washington the past week by the unusual situation which has arisen here by the effort of Health Officer Dr. W. C. Fowler to enforce an ancient butter law, fixing the standard of butter here at not over 12 per cent moisture and not under 83 per cent butterfat. The law was passed in 1898. Professor McKay had a conference with Dr. Fowler, and later with other officials of the District Government and with the Department of Agriculture. No announcement was made as to what adjustment was reached as to the butterfat standards. Professor McKay stated that it would be impossible to comply with the requirements, and that a serious effort to enforce the same would leave Washington without a supply of butter.

⚜

Mention was made last week of the visit here of Dr. Swaving and Professor Van der Burg, representing Holland dairy interests. The distinguished visitors inspected the Beltsville experimental dairy farm, and then left for Grove City to inspect the government creamery and cheese making plant there. From Grove City they were to go to Chicago. Dr. Swaving gave an address to the heads of departments at the Department of Agriculture. explaining the methods of manufacture of both butter and cheese in Holland, and explaining in still more detail the system of government inspection and marketing which places Holland dairy products in the markets of the world under the official approval of the Dutch government. It was evident that the real purpose of the visit here is to popularize and open the way for imports of Holland butter and cheese.

⚜

It is understood here that the Illinois Agricultural Association is planning a dairy division, and will enter the dairy marketing field for its members. Professor Larsen of South Dakota is said to be the choice of the committee in charge to head this enterprise. This will make the third cooperative marketing project of this association.

Southern Wisconsin Guernsey Sale

The first sale of the recently organized Southern Wisconsin Guernsey Breeders' Association was held at Janesville on October 14. A goodly number of both out-of-state and local buyers were in attendance and, taking all things into consideration, the sale was a large success. At a get-together meeting following the sale both buyers and sellers had only words of appreciation for each other.

The top price was $1,400 for Roselle of Fox Valley, with 508 lbs. fat in Class AA and on retest making 413 lbs. fat in 228 days, while her dam, Yeksa Dimple of Fox Valley, has 578 lbs. fat to her credit in Class EE. She was consigned by W. J. Dougan who had put her into sale condition and she was easily the typiest animal in the sale. Geo. M. Hendee of Connecticut was the successful bidder, winning out over Mr. Lewis and Mr. James of Wisconsin who sought to hold her in that state. Mr. Hendee took three other of the best animals. Besides these four that went to Connecticut, Minnesota took five, Iowa took three, Illinois and Montana took one each, and 42 remained in Wisconsin with buyers widely scattered.

The total sale amounted to $20,070, the 63 animals averaging $319 each. The following lists the prices of those selling for over $400, together with the name of the purchaser:

Geo. M. Hendee, Connecticut	
Roselle of Fox Valley	$1,400
Princess Hambro	400
Edgemoor Beauty Annabelle	420
L. A. Yaeger, Minnesota	
Rena of Lecbrook	$710
C. Nelson, Wisconsin	
Governor Shamrock's Little Beauty	$400
Geo. W. Hull, Wisconsin	
Imp. Wheaty II of Les Quarters	$410
Wm. Barber, Wisconsin	
Ladysmith of Grafton	$710
Ephriam Hette, Wisconsin	
Creamcup of Pleasant Point	$450
Art Halverson, Wisconsin	
Celena of Pecks	$490
C. Kiesling, Wisconsin	
Rosy of the Douvre	$400
W. D. James, Wisconsin	
Standard's Derina	$430
Geo. E. Richardson, Minnesota	
Bob's Melrose	$500

DON'T PUT OFF

Seeing your friends and having them join in for a club of subscribers.

Have You A Little Spare Time?

Have you a car—or a horse and buggy?

HOARD'S DAIRYMAN would like to offer you a proposition to look after our subscription interests in your community during your spare time.

It would be light, pleasant work among your old neighbors; and we can make it really profitable, too.

Write and tell us about the territory around you and how much you could take care of, and we'll make you a proposition.

Hoard's Dairyman, Fort Atkinson, Wis.

For Sale or Rent

Maple Grove Dairy Farm
Smithville - Ohio

Is for sale or rent. If not sold by Dec. 20, will be for rent. 212 acres, 50 head of registered Jersey cattle. Fertile soil and very fine buildings. No better location.

Address: Mrs. L. I. Buchanan, 904 Beall Ave., Wooster, Ohio.

The Improved Humane Stanchion

is the handiest, strongest, and most practical Stanchion on the market. Write to Humane stanchion Works, Baraboo, Wis., for literature on a complete line of barn equipment.

MORE and BETTER MILK

In Return for Peace and Comfort

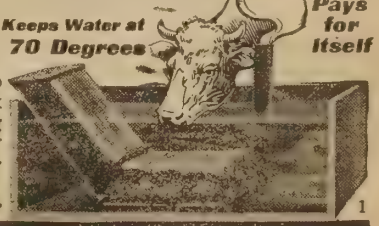
Convenience, cleanliness and comfort in the dairy barn save feed, time and labor and make the milk checks bigger. Give your cows safety and quiet, with pasture ease standing or lying, by installing Clay Sanitary Steel Stalls and Clay One-Hand 2-Way Stanchions. Better for the herd, for you and for your bank account.

CLAY Dairy Barn Equipment

makes dairying pleasant and more profitable. **Permanent construction** cuts up-keep costs. Strong, simple steel tubing—no dangerous corners. Easily cleaned. Stanchion closed or opened **both ways by one hand.** Fits any size animal. Hangs in center of stall—no sure-stops needed. Lock warranted cow-proof. All **CLAY** Equipment fully guaranteed.

FREE Barn Plans Our architects will plan your alterations or new buildings FREE. Let us help you make more money. Send name today—postal will do—for big catalog and Free Barn Plan Blank.

IOWA GATE CO., 201 Clay St., Cedar Falls, Iowa.



Don't Let Ice Water Freeze Out Your STOCK PROFITS

Your stock can't do well on ice water. Chilled stomachs retard gains and reduce milk yields. The NELSON Tank Heater burns wood, coal, cobs or straw.

NELSON Tank Heater

Soon Pays for Itself

Keeps Water at 70 Degrees

Heats twice as fast as any other heater. No welded seams to leak or rust, End of fire box and smoke pipe cast in one piece, extending above water line. Won't rust out. Clearance space for water to circulate under heater—ashes easily removed.

Write for Free Circular NOW.

HUDSON MFG. COMPANY, Dept. 31, Minneapolis, Minn.

Lowe's

Are you going to look on while he tears it down?

Are you going to let old man "Wear and Tear" have his way, destroying your buildings this Winter—or are you going to shut him off with a paint brush this Fall?

When you think what buildings cost these days; the cost of paint is nothing compared to the wonderful way it saves your buildings.

You know that the trouble with most of your neighbors is: that they don't paint until they *have to*. When you *have to* paint, your painting costs a lot more than it ought to. Costs more, because you *have to* use more paint and *have to do* more painting.

The time to paint your buildings is *before* they actually need painting. One coat will then do the work of two. So if you can't paint now, at least buy your paint. Send for circular on—"Figure Your Painting Costs with a Brush—Not a Pencil." Lowe Brothers' Paint is sold by the one best dealer in each town.

Whitewater Calf Industry

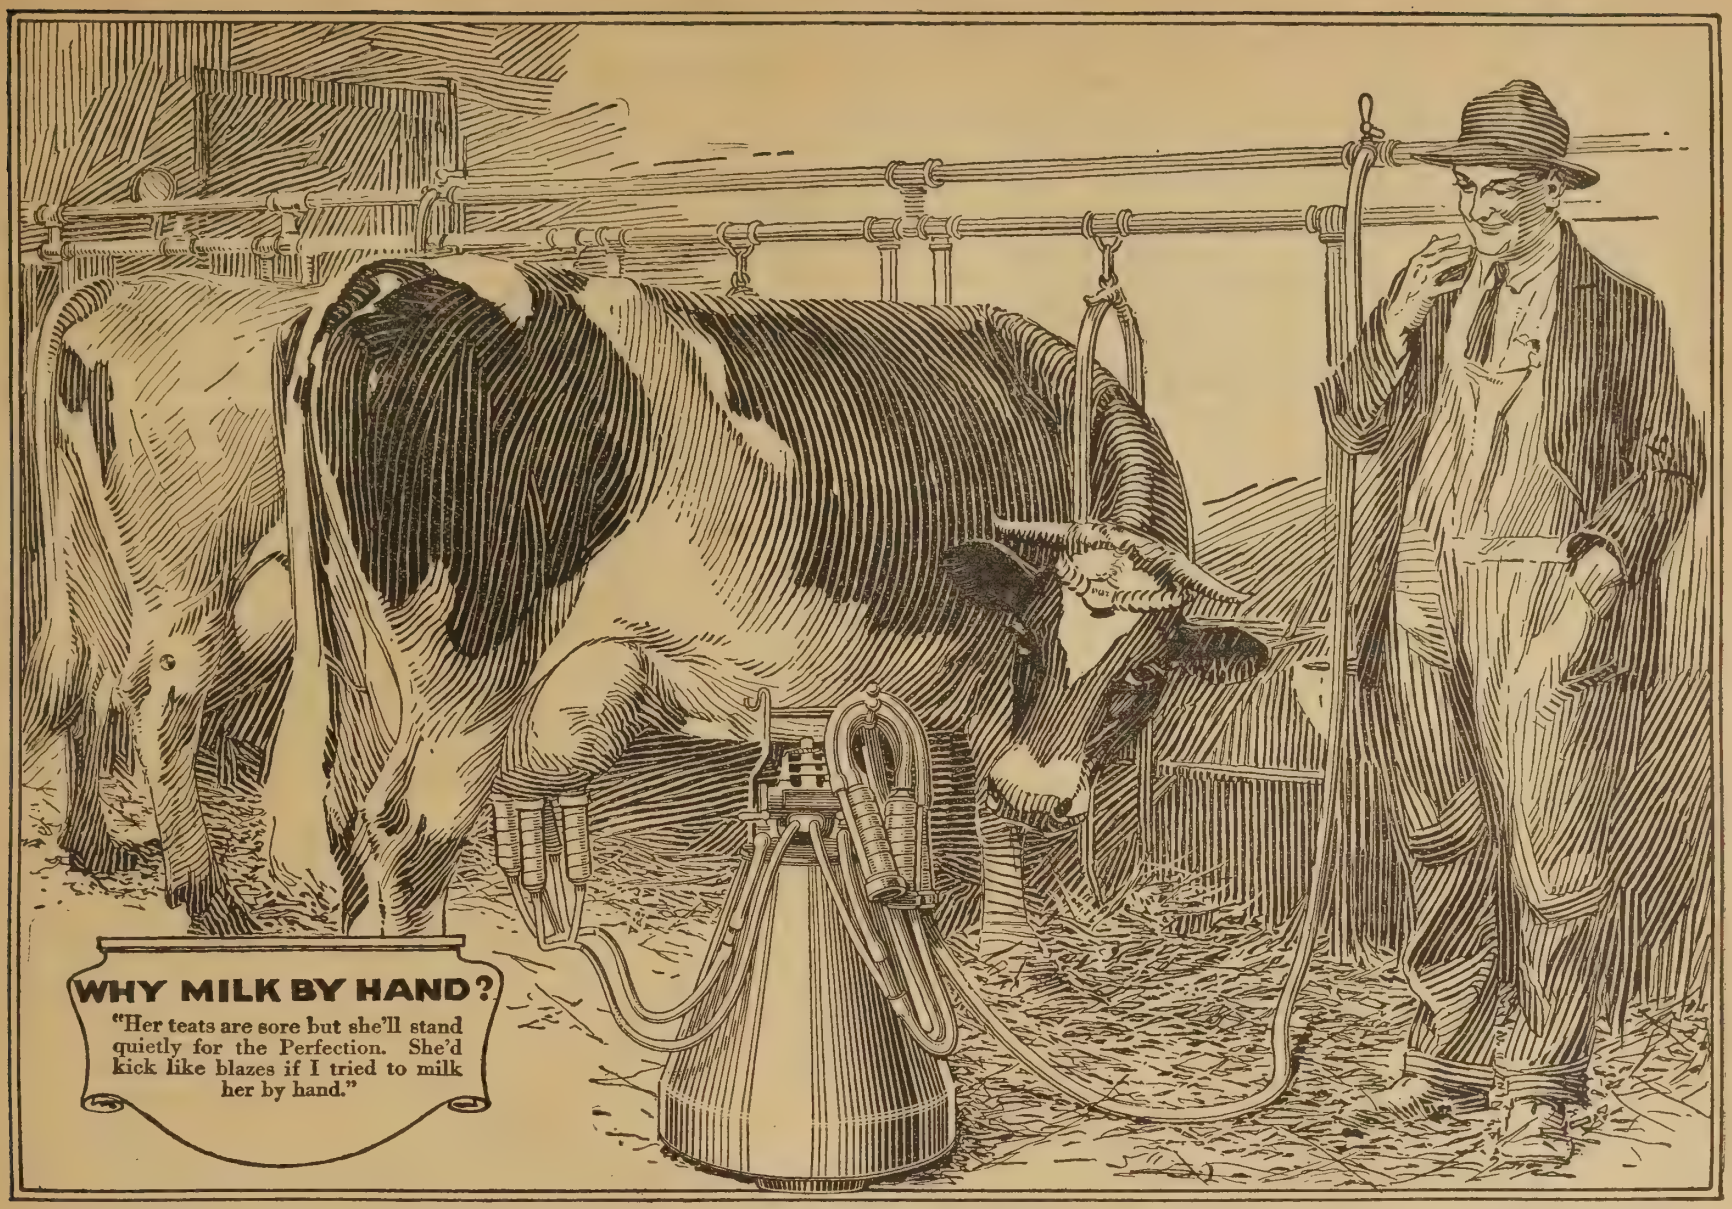
(Continued from page 599)

inserted a small advertisement in an agricultural paper. Replies were so numerous that he could have sold each calf a half dozen times. It was simply that the advertisement reached out beyond the local field where practically every farm produced more than enough calves to meet its own replacement needs. As there seemed to be a dearth of calves in certain less developed parts of the country, this individual began buying his neighbor's surplus calves and selling them by mail. Naturally, he advertised under the name of his farm. Seeing that he was building up a prosperous business, others began, after a few years, to copy his methods. At present there are perhaps fifteen or more individuals in this vicinity who are engaged in buying calves wherever they can get them and shipping them to mail order customers all over the country. A portion of them advertise under a farm name; others do not. But the business has long since expanded to the point where calves must be brought in from greater and greater distances. Large numbers of them come from the Milwaukee stock yards where they are picked by experienced men who judge them wholly on the basis of their appearance and promise of developing into likely animals.

Perhaps the only thing that introduces a suspicion of misrepresentation into the Whitewater calf industry is the fact that so many of these shippers continue to use a farm name in their advertising. This, of course, leaves them open to criticism but it appears to be a fact that in such instances the men own and operate farms bearing the names in question. Competition, moreover, is keen and this, perhaps, as much as anything else is responsible for the inclination to cling to the advantage which the use of a farm name lends in an advertising way. As in other lines of business, selling calves by mail—especially the offspring of grade cows—offers a field in which unscrupulous individuals may fatten. While such have not been unknown in Whitewater the business, for the most part, appears to have been in the hands of men who occupy positions of standing in the community. However, certain substantial citizens are frank to express regret that much of the advertising involved should carry the impression—while not actually affirming—that the calves offered are bred on Whitewater farms. Breeders of pure-bred stock in the vicinity naturally, also, feel that they have cause for complaint—especially since the calf industry, which at first was confined to grade animals, is now branching out into the handling of pure-breds.

Turning, now, to the other angle of this industry it will be seen, it is believed, that there is something to be said in favor even of selling veal calves from this section at double their stockyard prices to dairymen in other parts of the country. Naturally, thousands of calves from Wisconsin farms find their way to the Milwaukee stock yards. These calves represent the surplus by-product, so to speak, of an industry which has made Wisconsin famous as a producer of milk and milk products. Into the vicinity of Whitewater, for instance, one Septer Wintermute, an early breeder, brought a splendid bull as much as 30 or more years ago. He paid $1,000 for him—a top-notch price for that time. To this day the blood of Septer Wintermute's wonderful bull mingles in the blood of many of the grade cows to be found upon the farms of Walworth County. Similar conditions exist elsewhere. In a way, even the grade herds of Wisconsin are the result of years upon years of constructive dairy work no less than are the herds that have been built upon definite blood lines. It is undoubtedly true that many a calf in this region has been turned into veal that would have developed, under proper care and handling, into a splendid producing dairy animal. The chief misfortune of many calves that get to the Milwaukee stock yards is simply a lack of pedigree. Like many orphans of the human kind they are permitted no opportunity to show what they can do. When the condition of the dairy industry in certain parts of the South and West is considered, it must be evident that these calves—orphans though they be so far as antecedents go—can far better serve human needs in the form of producing cows than as veal.

It is interesting to note that hundreds of these grade calves have been distributed among the farmers of the South by bankers, big lumber companies, and other concerns that come in touch with rural life. One southern buyer recently sent in an order to a Whitewater calf shipper for fifty head. In his letter he stated, "The first calves you sent me a few years ago are now producing milk on farms in this vicinity and giving a splendid account of themselves. They are a marvel to the farmers of this community." So, even the calf which is without honor in her own country may find it thrust upon her when she begins to produce milk in a region where almost anything with hoofs, horns, and milk veins is looked upon as a cow. It is but another illustration of the fact that a comparatively valueless product in one region may become a valuable one in another.



A leading shipper stated that while he would not be positive in his assertion he believed that he had shipped calves to every state in the Union. "Most of them," he said, "go to the states where dairying is far from being as developed as it is in Wisconsin. We have some complaints, of course. One man wrote me recently that his cows were not producing as he expected. We told him this was a thing we could not guarantee as so much depends upon care and feed. I've chuckled several times over his reply to my letter. He said, 'He guessed he didn't have much cause for complaint, but that he thought he ought to kick a little on general principles.'"

To this statement the same shipper added these words which it is well to to record: "Even those who ship calves C. O. D. meet with few refusals to accept the animals after they have inspected them. *A calf never looks larger or finer than it does in a crate.*" Perhaps this last information is worth filing away in the back of one's head for future reference.

Flax Straw Useful

Don't waste the flax straw because there is a good market for it right now," says A. H. Wright of the Wisconsin College of Agriculture. "Wisconsin's flax straw is superior to that of the states farther west and commands a higher price because of its greater length."

Various uses are found for flax, but the chief are those using the so-called "green-tow" in the manufacture of rugs, upholstery, and carpets. According to Mr. Wright many inquiries are being made for sources of flax straw and the College of Agriculture, Madison, is offering to assist anyone in the sale of his straw by referring his name to manufacturers.

"On the fourth day of the test the teats of my Junior Three Year Old got so sore I could no longer milk her by hand. So I finished the test with the Perfection which she liked far better and was surprised to see a big increase in the milk flow. No more hand milking of test cows for me." —D. N. GEYER.

Cows Prefer Perfection To Hand Milking

UNDOUBTEDLY you have had cows with sore teats. Remember how hard they were to milk and how they kicked when you milked them by hand? If you were to see those same cows stand quietly while being milked with a Perfection and increase their milk flow, you would be convinced that cows prefer the Perfection to hand milking.

Hundreds of Perfection owners tell us that their cows prefer the Perfection to hand milking. They stand for it quietly and give more milk. Cows prefer Perfection's action because it is just like the calf's, a gentle suction followed by a downward squeeze, followed by a period of rest. And the Perfection can be adjusted to either hard or easy milkers.

You too will prefer the Perfection. It does the work of three men. It soon pays for itself in saving of wages. Get a Perfection for your cows and see how much better they like it than hand milking.

Find Out More About The Perfection

Send for a copy of our book "What the Dairyman Wants to Know." It's free. We shall also be glad to give you the names and addresses of Perfection owners near you. Why milk by hand? Cows prefer Perfection.

C. E. Ward's Holstein Herd

Palmyra, Wis., Nov. 1st

Having leased my farm, I am disposing of my entire herd of registered Holsteins. It includes 27 head, rich in Ormsby and Johanna breeding. Among them are 2 daughters of a 20.7-lb. cow, a daughter of a 22.5-lb. cow and a daughter of a 17-lb. 4-year-old.

There are several daughters of Sir Korndyke Bess Pietertje and Sir Johanna Coronna, both of them grandsons of S. P. O. M. All the females of breeding age are bred to Sir Johanna Coronna. He will also be sold.

Sale will be at the farm 4 miles north of Palmyra and 5 miles south of Sullivan. It begins at 1:00 p. m.

Everything tuberculin tested and guaranteed

Herd Sire Offered — King May Secret of Homestead No. 52964

He is sired by Pencoyd's Golden May Secret No. 39626, that sold for $10,000.00, and is out of Nella Jay IV, A. R., 3rd highest producer of the breed; milk 20,709.9 lbs., butterfat 1,019.2 lbs. Dam is Raymond's Tidy, A. R., milk 8,419.0 lbs., butterfat 435.6 lbs. at 2 yrs.

A number of the progeny of this sire are offered in the sale, and all females listed as bred, are bred to him. Animals sold subject to sixty-day retest.

Several cows with Advanced Registry records will be listed, also a number of cows now on official test. The best breed families are represented in the pedigrees, such as May Rose, Yeksa, Masher Sequel, etc.

A 35-lb. Bull Had 3 Sons — Buy One

The bull, Triumph Concordia De Kol, has 8 A. R. O. daughters. His dam was Lady Concordia De Kol, 35.08 lbs. in seven days and has three A. R. O. daughters. He weighed 2,700 lbs. and was a great individual. His get is remarkably sized, straight and strong.

Son No. 1—Prince Concordia Triumph 295965. Eighteen months old. His dam made 65 lbs. fat in one month, was a daughter of Segis Lyons with 18 A. R. O. daughters. This is a bull of great individuality ready for heavy service. He will make a great herd sire.

Son No. 2—Concordia De Kol Triumph 299880. Fit in every way to carry his sire's name. Sixteen months old, out of a dam now on yearly test and running strong.

Son No. 3—Eleven months old. His dam is a granddaughter of Sir Ormsby Skylark, sire of world's champion butter cow. He should make a sire of eminent perfection of type and production.

I've been breeding good Holsteins for 14 years and can recommend any of these. The price will strike you as very reasonable.

Can't tell you all about these in an ad. But I can send you a good fair description of each one if you'll ask for it.

Has put the proof Right in the pail

You don't have to "try" Purina Cow Chow. It has been tried and proven, over and over. For every 5c extra spent for Purina Cow Chow, average users get back about 12c extra. This is the way it figures out.

Spend $10.00 more—get $25.00 More

Suppose Cow Chow costs you $10.00 per ton more than what you are now feeding. That's 50c per bag—½c per pound. Each cow will eat 8 to 10 lbs. of Cow Chow per day, costing only 4c to 5c more.

Get 3 pints More Milk Per Day

Cow Chow will make you about three pints more milk per day per cow. These three pints, that you are not getting now, should sell for 12c to 15c wholesale—maybe more. These figures are really low, because many users report much larger gains.

Order at least two sacks for each cow in your herd, and you will never go back to the old way of feeding. The cows like Cow Chow and it keeps them in fine condition.

See your dealer. Write for "The Purina Cow," free.

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Selection and Care of Poultry Breeding Stock

One of the essentials for success in poultry-club work is good stock. This means standardbred stock, for this stock has been bred and developed for specific purposes and therefore best meets the needs of the boy or girl. A flock of standardbred fowls possesses a uniformity of appearance which the mongrel flock never has, and will arouse the club member's pride and lead to better care.

Moreover, standardbred fowls produce eggs and table carcasses which

A STANDARD BRED PLYMOUTH ROCK MALE

are much more nearly uniform in size, shape, and color, and which therefore bring better prices. It costs no more to feed and care for standardbred fowls than for mongrels, and there is often an added income possible from them, which may amount to a handsome profit from the sale of breeding stock or eggs for hatching.

Health and Vigor

Only by continuous selection for health and vigor is it possible to build up a flock which will produce fertile eggs, strong chicks capable of making quick growth, and pullets with sufficient stamina to withstand the strain of heavy egg production. The appearance of a bird is not always a sure indication of its vigor, but appearance and action taken together are a fairly reliable guide for picking out vigorous birds.

The comb, face, and wattles should have a good, bright color; the eyes should be bright and fairly prominent, and the head should be comparatively broad and short, having a fairly short, well-curved beak and showing no tendency to be long, "snaky", or "crow-headed". The bird should be alert and have a strong, vigorous carriage; the legs should be set well apart and strongly support the body, giving no indication of weakness or a knock-kneed condition. The bone, as seen in the shank, should be strong and not too fine for the breed, while the toes should be strong, straight, and not too long. The plumage should be clean and smooth, as a lack of condition often accompanies soiled, roughened plumage. The condition of flesh should be good, as a very thin bird is usually in poor health. Sick fowls or fowls which have apparently recovered from sickness should never be used by the club members for breeding if it can be avoided.

Object of Breeding

In selecting stock for mating, the club member must keep clearly in mind the purpose of the breeding. If it is the purpose to produce exhibition stock, it is necessary to select birds that are nearest the standard in color, type, and markings, or which when mated will combine their qualities so as to produce offspring most nearly conforming to the standard.

If the desire is to produce table fowls, a breed that has a standard type or a body shape suitable for carrying an abundance of meat should be selected. They should be broad and deep of body, have good length of back and keel, and especially a broad breast well covered with meat. If the desire is to breed for eggs, birds should be chosen, so far as possible, that are good egg producers or are the offspring of good egg producers and conform to the standard requirements for the breed. If hens are trapnested, it is easy to make the selection on the basis of good egg production. If trap nests are not used, it will be necessary to make observations of the stock several times during the fall, from August to November, in order to note which are the best layers as indicated by the time of molt and lateness of laying. For information how to make such a selection, see Farmers' Bulletin 1112.

Whatever the purpose of the breeding, progress will be made most quickly by picking out the best individuals in the flock and using them as breeders rather than by breeding from the flock as a whole. The selection of a male for the mating will be influenced largely by the character of the females used. If there is a general weakness in the females in any respect, this should be offset so far as possible by strength in that particular in the male used.

Time of Mating

Matings should be made at least two weeks before beginning to save the eggs for hatching. If less time is allowed, the maximum fertility is not likely to be obtained. It is often desirable to mate even further ahead than two weeks so that a few eggs can be incubated for 5 or 6 days to see whether they are fertile. If these eggs are not fertile, there is still time to change the male bird and thus be sure of fertile eggs for the earlier hatches.

Size of Mating

The breed influences the size of the matings. If the fowls are confined to a yard it is usually desirable to run from 12 to 15 females of the smaller breeds, such as the Leghorn; from 10 to 12 females of the general-purpose breeds, such as the Plymouth Rock; and from 8 to 10 females of the heaviest breeds, such as the Brahma, with 1 male. Where the fowls have free range and the male is strong and vigorous, it is often possible to obtain fertile eggs with a considerably larger number of females to each male. A vigorous Plymouth Rock cockerel on free range should give good fertility when mated to 20 females, while a Leghorn male under similar conditions can be mated to 25 or 30 females, with good results. If eggs for hatching are desired from a flock too large for a single male to fertilize, two or more males can be run with it, either at the same time or preferably by alternating the males on successive days. It is best, however, to use a mating small enough so that a single male can be used.

Age of Breeding Stock

Either pullets or hens and either cockerels or cocks can be used in the breeding flock. If cockerels or pullets are used, they must be well matured. Hens are better than pullets, as they lay larger eggs and give better fertility and stronger chicks. Yearling and 2-year-old hens are better than older hens. If pullets are used as breeders they should be mated with a cock rather than with a cockerel, while if a cockerel is used he should be mated with hens rather than with pullets. As a rule, well-matured cockerels will give better fertility than cocks.

Free Range for the Breeding Pen

When possible, free range should be provided for the breeding stock. It

POOR SPECIMEN FOR BREEDING STOCK—KNOCK KNEED

is better to provide it during the entire fall and winter before the breeding season, but, if this is not possible, free range just preceding and during the breeding season will be of great value. Birds on free range will get more exercise and therefore will be in better health and will give higher fertility, better hatches, and stronger chicks.

Maintaining Flock Fertility

Watch the breeding flock carefully and see that the fowls keep in good breeding condition. The birds and the houses should be examined to see that they are not infested with lice or mites. Either of these pests in any numbers will seriously affect or totally destroy fertility. Care must also be exercised to see that the male does not frost his comb or wattles. If these are frosted his ability to fertilize eggs will be impaired and may not be recovered for several weeks. On very cold nights when there is danger of the combs being frosted the males to be used as breeders must be placed where their combs will not freeze. This can be done by placing them in a box or a crate of suitable size partly covered by a bag or cloth. The breeding male should be examined occasionally after feeding to see that his crop is full and that he is not growing thin. Some males will allow the hens to eat all the feed, with the result that they get out of condition. If this happens the male must be fed separately from the hens at least once a day.

Housing Breeding Stock

The breeding stock must be provided with comfortable quarters. This means that the house must be draft proof yet well ventilated and dry. Room enough must be allowed so that the birds will not be crowded. If the birds are yarded, 4 square feet of floor space per bird should be allowed, but on free range from 3 to 3½ square feet per bird will be enough.

Feeding Breeding Stock

The breeders must be fed so as to keep them in good condition and so that they will produce eggs. Any good laying ration is suitable for this purpose, but it should not be extremely forcing, or, in other words, should not have an extremely large proportion of beef scrap, not more than from 10 to 15 per cent of the total ration. The birds should be kept in

Cow Waters Herself

with this wonderful new Libbey Automatic Water Bowl. Animal moves lever, opening water valve, when it starts to drink. Lever swings back, closing valve, when animal stops drinking.

15% More Milk

Milk is 87% water, and cows cannot give their greatest yield unless they have plenty of water constantly within reach. Farmers who use Libbey Bowls report an increase of 15% to 20%, which soon pays for the bowls.

Libbey Automatic Water Bowls

are the most sanitary and successful ever invented. Each bowl controls its own water supply, operated entirely by cow, and may be put at different heights, or in any stall or pen. No float tank required. Cannot overflow; cannot get out of order. Almost no water left in bowl to become stagnant. They save labor and feed and increase milk. Prevent spread of contagious diseases, as each cow has her own bowl and no water can pass from one to another, as with old-style bowls. Very simple and easy to install. Write for circular and prices, also FREE DAILY MILK AND FEED RECORD.

If interested in Stanchions, Stalls, Carriers, etc., ask for free General Catalog.

good flesh but should not be allowed to become excessively fat. All whole or cracked grain should be fed in the litter so as to force the fowls to exercise by scratching for it. As a supply of green feed is usually lacking late in the winter or early in the spring, sprouted oats, cabbage, mangels, or cut clover or alfalfa should be fed to the fowls.—ROB R. SLOCUM in Farmers' Bulletin 1116.

Juniors in Dairyland

The Harford County team went home from the state-wide dairy cattle judging contest for agricultural boy club members at the Maryland State Fair, Timonium, September 3, with first place honors, $150 in cash prizes, and a pure-bred Jersey bull calf.

As a result of this contest, the first of its kind ever held in the state, Maryland was represented in the junior judging contest for dairy cattle at the National Dairy Show in Chicago, October 8.

The Timonium contest was exceptionally noteworthy because of the interest aroused throughout the state in the dairy industry and because of the generous prizes and liberal support which the fair officials contributed to make it a success. Despite the fact that a limited period of little more than a month was given to prepare for the contest and that calf club work in Maryland has not been generally developed, sixteen of the twenty three counties of the state were represented in the contest and competed so closely for honors that prizes were distributed among thirteen teams.

THE HARFORD COUNTY JUDGING TEAM
From left to right: Edger Palmer, Joseph Hoopes, and Chas. R. Davis. They are backed up by Assistant County Agent, W. C. Snarr.

The contest was staged through the efforts of the University of Maryland Extension Service in co-operation with the fair management and only bona fide sons of farmers who were actual boy club members were admitted. It was superintended by G. E. Wolcott, specialist in dairy husbandry for the University of Maryland Extension Service, ably assisted by E. G. Jenkins, State Boys' Club Agent, P. W. Chichester, Assistant Boys' Club Agent, and all the county agents.

So far as premiums were concerned, the contest was rich with opportunities. Five team prizes, ranging from $100 to $150 were offered by the fair association. Individual prizes, ranging from $25 to $50, were offered to the boys making the best standing in judging each of the four dairy breeds—Jerseys, Holsteins, Guernseys, and Ayrshires—represented in the rings. As a sweepstakes prize, a pure-bred bull calf from each breed was awarded. And in addition to this the fair association bears all expenses of the team finally selected to represent the state at the National Dairy Show at Chicago and pays all expenses of the county teams to and from Timonium and during their stay on the grounds.

Junior Letters

Hoard's Dairyman Juniors:—I have four guinea pigs. My old one had three little ones. They are two or three days old. My two little chickens died.

There is a pig club here this year but I am too young to join.

We have five horses and three colts. One of the colts is pretty tame. I am going to buy a pure-bred Holstein heifer calf. We also have four cows and one heifer that we milk and another heifer which will be fresh soon, one yearling, five calves, four heifer calves and one bull calf. One of the heifer calves is a high grade.

Well, I will close, wishing some of the juniors would write to me. My address is R. F. D. No. 2, Union, Ia. Addie Curless.

Hoard's Dairyman Juniors:—This is my first letter to the juniors' page. We have 8 cows. Five are registered Holsteins and the rest are grades. We have a registered Holstein bull. His name is Aaggie Colantha Pontiac Rag Apple. I am 11 years old and in the 6th grade. I wish some of the juniors would write to me. My address is Route 3, Hillsboro, Ore.
Edward Spiering.

Hoard's Dairyman Juniors:—I have been reading the junior letters for some time and thought I would join. I am 14 years old. I have been plowing this last week. I have two sheep. One of them is an old one; the other one is young. I paid $10 for the old one last year and $6 for the young one about 2 weeks ago. If some junior would like to write to me my address is Janesville, Minn.
Theodore Winter.

Hoard's Dairyman Juniors:—I'm a little delicate boy 12 years old who has never been to school. I can read, though, and have read lots of good books. I have three brothers and three sisters. My father is dead. My brothers, 18 and 15 years old, and I run a dairy. We milk 12 cows and sell whole milk. I have two nice cows. Gave my baby sister one. Mamma lets all of us have cows and ponies. We have two good saddle ponies that we drive to the milk wagon. We have three good work horses and we boys run our 80-acre farm. We raise cotton, barley, kaffir and Sudan for hay and pasture.

Guess I've writen enough. Would be glad to have letters from some of the juniors.
Oklahoma. Martin Rutherford.

Hoard's Dairyman Juniors:—I have 13 ducks, but I had 18 and I lost 5 of them. They are growing fast. We have 8 cows and 5 calves. We have 18 hogs but the most of them are just little pigs. We have about 35 rabbits around here; about 30 of them are little ones.
Ohio. Eli Bontragh.

Hoard's Dairyman Juniors:—My father takes Hoard's Dairyman. I like to read the junior letters and the stories about Bob Ramsay and Jimmy Greene.

I am 13 years old, and in the first year at high school.

My mother and I have 22 rabbits in partnership. They are Belgian hares.

We have 9 cows. Three of them are pasturing on another farm. We are only milking three of them. Their names are Laurie, Katy, Dora, Black Beauty, Mollie, Lassie, Queen, Maude, and Nancy. We have two calves, too, and one yearling.

We have three horses. Their names are Judge, Desire, and Gipsy.

Our farm is about 55 acres of which 5 acres are not tillable. They are woods.

We have about 100 White Leghorn hens.

My address is Route 5, Bath, N. Y.
Ethel Perry.

Hoard's Dairyman Juniors:—I received the watch fob, button, and creed and thought them very nice. I am twelve years old and in the 7th grade. I walk three miles to school every day. We have seven Holstein cows and twenty-five three-week-old pure-bred O. I. C. pigs.

It has been very seasonable here and plenty of rain. The corn crops are good.

I wish some of the juniors would write to me. I enjoy reading their letters. My address is Lovettsville, Virginia. Best wishes to all the juniors. Wilford H. Spring.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

A model home, truck and dairy farm. Price, $20,000. H. E. BLAKESLEE, Gulfport, Miss.

Where dairy farming is profitable—There are localities in the South where, on account of the rapid development of industrial cities and towns, supplies of dairy products are short and prices are high. In these same localities long grazing seasons and winter cover crops cut down feeding costs and all conditions are exceptionally favorable for profitable dairy farming. Good improved farms can be bought at prices much lower than are asked for similar lands in other parts of the United States. Buy a Southern dairy farm now while prices are still low, make money and build up a valuable property. Forr full infromation write to J. C. WILLIAMS, Manager, Southern Railway Development Service, 1302 Pennsylvania Avenue, Washington, D. C. 14-spl.

Holsteins For Sale

12 registered yearlings coming 2 yrs. old, not bred, some from 20-lb. dams. $125 tested.

6 registered heifers coming 3 yrs. old, due to freshen early fall and winter. $190 tested.

1 yearling bull from 24-lb. dam and 33-lb. sire. $175 tested.

F. L. Jones, Maple View, N. Y.

Pabst Stock Farm's First Sale a Success

The Pabst Stock Farm is Wisconsin's largest Holstein breeding establishment and one of the largest in the country. Mr. Fred Pabst, the owner, has been years in building up his present herd, which numbers approximately 400 head. He has, heretofore, disposed of his surplus young bulls both at public sale and private treaty, keeping practically all desirable females in his herd. During these years, however, it has been one of his aims to build up a herd that would warrant a semi-annual sale as the outlet for all surplus—nothing to be offered at private sale.

That ambition was finally realized on October 9, the date of the Pabst Stock Farm's first semi-annual sale. This was entirely a bull sale, but at future sales a gradually increasing number of females will undoutedly be offered.

A sale of this character is a new departure in Holstein circles. It is in fact something new to dairy cattle breeders generally, and is by no means something to be lightly undertaken. There were many who prophesied an unsuccessful sale, but the fact remains that the Pabst Stock Farm put it across. They sold 36 young bulls—the surplus for practically a 6-month period—for an average price of $671, perhaps not as much as they would have brought at private sale, but a fair price, nevertheless. Furthermore, they sold them to one of the best sale crowds we have ever seen at any sale short of a state or national event.

Approximately 700 people representative of seven or eight different states were present and they filled the sale ring, a well arranged pavilion in one of the main barns, to overflowing.

Six bulls sold for four figure prices, bringing a total of $13,050 with the top at $3,000. Pabst Ivy Pontiac, a son of King Pontiac Champion from Pabst Maplecrest Ivy (32-lb. 3-year-old), brought this figure, going to the Mills Estate, Inc., of California on a wired bid. P. E. Ansted of Ohio was the last contending bidder.

Ten sons of Creator, the junior herd sire, brought a total of $8,715, outselling any ten others of similar quality and breeding.

Haeger and Mack did the selling with S. T. Wood in the box.

Following is a list of all animals bringing $350 or more and buyers of same:

Jefferson Co. Farm, Wisconsin	
Pabst Korndyke Clover King	$2,100
W. H. Rhoda, Wisconsin	
Pabst King Pontiac Lad 26th	$370
Louis Hoppe, Wisconsin	
Pabst Champion Hercules	$380
Fred Strobel, Wisconsin	
Pabst Geranium Clyde	$350
S. R. Dobberton, Wisconsin	
Pabst Clyde Mechthilde	$400
Andrew Frank, Wisconsin	
Pabst Korndyke Ormsby Hengerveld	$700
John Edwards, Wisconsin	
Pabst Woodcrest Pontiac	$1,850
John Meyers, Illinois	
Pabst Woodcrest Clyde Champion	$425
West Zeller, Minnesota	
Pabst Creator Mutual De Kol	$2,200
John Rufe, Wisconsin	
Pabst King Pontiac Lad 33d	$1,650

W. L. Huson, Wisconsin	
Pabst King Pontiac Lad 38th	$350
Ray C. Judd, Wisconsin	
Pabst Creator Ormsby	$2,250

New York Butter Market

NEW YORK CITY, OCTOBER 11:—Developments in butter markets throughout the country have been very unsatisfactory during the past week. The fact that the consumer will purchase nothing but fancy butter is the one thing that is demoralizing butter markets. As one well known butter dealer stated recently: "The condition of the market at the present time so far as demand for butter of high and low quality is concerned, is due largely to a peculiar mental attitude of the consumer. When seconds were quoted at three and four cents under the prevailing prices of extras and higher scoring butter, as they were in years past, the consumer did not feel that he was purchasing a low grade product as there was very little difference between the retail price of fancy and low grade butter. However, today there is a different story. Fancy butter is retailing at prices from eight to fourteen cents above the selling price of medium to undergrade butter. The consumer feels in purchasing the cheaper butter that he is getting an undesirable product, simply because of the price difference. If he but realized it he would know that much of the so-called undergrade butter is highly edible and the average consumer could not tell the difference between it and fancy butter if it were served to him at the table."

Chain stores which formerly sold practically no fancy butter over their counters in former years, now find that their customers are not satisfied with the grade of butter which they formerly sold. This has resulted in chain store organizations becoming purchasers of enormous quantities of fancy butter while they have ceased buying undergrades, which is one of the reasons why there are great accumulations of butter of medium and inferior quality. The arrival of large quantities of Argentine butter, which is uniformly poor, has served to cause greater accumulations of poor butter than if only our domestic supply were available. As the bulk of the Argentine butter is selling at 46@49c, it can be readily seen that similar grades of our domestic make must sell at similar prices. The situation as regards undergrade butter becomes more serious each day. Receivers are due to lose large sums of money as many have taken large quantities of such butter to account and must bear the loss in case there is a marked decline in the price of such butter.

At the outset last week, high quality butter was in very active demand. This resulted in an advance in price of 1c on Monday and a similar advance on Tuesday. From the latter day until Saturday there was no change in the price of fancy butter but it became more and more noticeable toward the close of the week that there was a sharp curtailment of trading. On Saturday, that condition resulted in a price decline of 2½c. Today, there was no change in quotations but the market has been far from active. In view of the fact that tomorrow is a holiday, being Columbus Day, it is surprising that there is no greater activity in the market. Established quotations at the close today are: Extras (92 score), 61c; higher scoring than extras (93 score or higher), 61½@62c; firsts (90—91 score), 55@60c; firsts (88—89 score), 50@53½c; and seconds (83—87 score), 47@49c.

W. B. LIVERANCE.

Coming Events

Louisiana State Fair, Shreveport, La., October 28 to November 7. W. R. Hirsch, Secretary.

Nov. 9—11, 1920, Wisconsin Buttermakers' Association meets in Madison. Secretary, H. C. Larson, Wisconsin.

Jan. 4—6, 1921, Wisconsin Cheesemakers' Association meets in Milwaukee. Secretary, J. L. Sammis, Madison, Wis.

A Snap of the Button and— *let there be Cream!*

That's all the work there is to separating with the *motor-drive Primrose* once the supply can is filled with milk. Electricity takes the place of human energy. The willing motor shoulders this task and turns the separator at the same uniform speed from beginning of the run to the end.

The *motor-drive Primrose* is a self-contained power unit and cream separator. Securely mounted on a substantial base which is an extension of the shelf at the top of the separator stool, the economical, tireless motor is ever ready for instant service. A snap of the electric switch button and the separator is put in motion. The motor is completely enclosed to exclude dirt and water.

If electric power is available on your dairy farm, the *motor-drive Primrose* should prove of more than passing interest to you. *Primrose* skimming efficiency plus electric operating efficiency makes an unbeatable combination.

Another 10,000-lb Herd

Eight years ago Richard G. Bishop of Ohio returned from an eight weeks' short course at Ohio State University, converted from a keeper of milking Shorthorns to a desire to breed Holstein cattle and get into the dairy business right. Being a partner with his father in the farming of the 146-acre farm, it was necessary first to convert the senior member of the firm to Holstein thinking. This took place in due time, the Shorthorns were dispersed, and the Bishops started in the Holstein business in March, 1912, with three grade cows. A few months later they added 8 more cows and two heifers. For five years they worked with grade milking machines until in 1917 the junior partner launched into pure-breds with a cow and a heifer calf. Eighteen months later two more pure-bred heifers were added to the herd. A pure-bred bull was used from the start and the heifer calves have been kept until now 25 head are in the herd, eight of which are pure-breds.

The Bishop herd is evidence that their owners are good breeders and care takers, and strong believers in regularity with the cows. Young Bishop said, "We believe that this work must be done regularly and our cows are always milked at the same hour twice a day if nothing else gets done." The reward for such work is that for the year ending June 1, 1920, this herd in the Union County Cow Testing Association finished with an average of 10,053 lbs. milk and 355.3 lbs. fat. Of the 12 cows there were only two full aged. It cost an average of $129.11 to feed these cows and the income above the cost of feed amounted to $189.25 per cow.

It is the practice on this farm to make home grown feeds the basis of the ration. These cows received alfalfa, silage, corn fodder, ground oats, and corn which was supplemented with a little oil meal and bran. Father and son take care of the herd and do all the work on this 146-acre farm. The high cow for milk in this herd was Sissy, a two-year-old grade that produced 10,964 lbs. milk, 360.8 lbs. fat and the high cow for fat was Betsy, another grade with 10,927.5 lbs. milk, 364.40 lbs. fat.

These men are growing into the pure-bred business instead of going into it and by successful care and management and wise breeding methods will some day have a real herd of pure-bred Holsteins.

H. C. BARKER.

BETSY, A GRADE, WAS SECOND HIGH COW IN THE BISHOP HERD

SISSY, A GRADE 2-YEAR-OLD HOLSTEIN, IN 1919 WAS HIGH COW IN THE BISHOP HERD

FRESH WATER FOR EVERY DRINK
The more clean, fresh water a cow consumes the more milk she gives. Make it easy for her to get fresh water.
The ACORN Drinking Bowl
permits her to obtain fresh water by simply poking her nose into the bowl—valve opens automatically giving fresh flow of water. Write for circular.

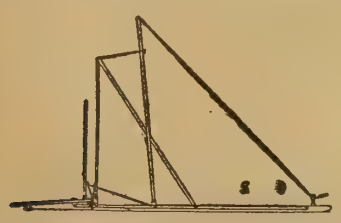
Inventions and Appliances of Interest to Agriculture

Mowing Machine

The new feature of this machine is a foot lever which enables the operator to raise the cutter bar a short distance, to avoid irregularities in



the surface of the ground, without stopping the action of the cutter.

(Moline Plow Co., Moline, Ill., U. S. Patent, 1,318,418.)

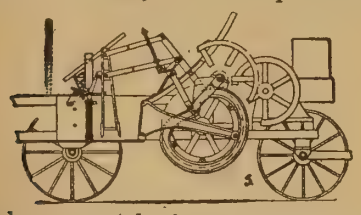
Hay Stacker

One objection to stackers of the "over-shot" type is that the hay is all delivered at one spot; to overcome this objection, the tines of the stacker shown here are made so that they can be shifted to the right or left to de-

liver the hay in either direction as required.

(Superior Hay Stacker Co., Linneus, Mo., U. S. Patent, 1,305,420.)

Hay Loader



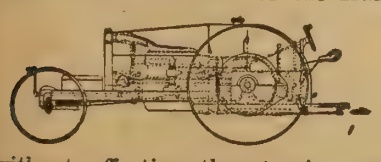
The elevator on this loader is so jointed that the end can be raised or lowered without altering the tension of the conveyor belt. It is lowered

when the wagon load is low and is raised as the load becomes higher.

(Rock Island Plow Co., Rock Island, Ill., U. S. Patent, 1,309,861.)

Baling Press

This press is simple, compact, and efficient. The improvement lies in the block guide, which is so arranged that the block, used to separate two



bales, cannot be improperly inserted, and thus cannot cause breakage.

(Emerson-Brantingham Co., Rockford, Ill., U. S. Patent, 1,308,397.)

Tractor

The improvements claimed for this tractor are: first, the draw bar can be shifted sidewise to overcome the torque of the machine; second, the steering mechanism has an extra long pinion which permits the wheels to follow the vibrations of the frame

without affecting the steering; and third, the power pulley is extra large and can be run slowly.

(Evans Mfg. Co, Hudson, Ohio. U. S. Patent 1,318,440.)

Canada. C. J. LYNDE.

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

What is a Corpus Luteum

Some of our readers are puzzled to know just what is meant by a "persistent corpus luteum" referred to in recent answers relative to barrenness in cows, so a word of explanation will be of interest.

"Yellow body" is the more common term for the object in question. It is found in the ovary of the female and results from clotting of blood following rupture of a Graafian follicle and escape of an egg or ovum at time of coming in heat or estrum. Bursting of the ripe follicle causes a wound which bleeds; then the clot of fibrin forms and a scar is preceded by formation of the yellow body which owes its color to deposits of coloring matter or pigment. Similar pigment or pigmentation is commonly seen on various parts of the cow's body, as every dairyman knows. Ordinarily the corpus luteum disappears shortly after the period of heat subsides, probably in from 18 to 20 days; but if the cow is bred and conceives, the yellow body is not reabsorbed and persists or remains throughout pregnancy, and even after that occurrence.

When a cow fails to come in heat, or when her periods of heat are constant or irregular, expert examination of the ovaries by way of the rectum may show that cysts are present or that a corpus luteum has persisted. The cyst is a collection of fluid in a large bleb or blister which rises well above the surface of the ovary or possibly involves the body of the ovary. It is the evidence of disease or degeneration and the abortion disease germ (Bacillus abortus, of Bang) is the common cause. That infection is also the probable cause of a persistent corpus luteum. Rupture of the cysts, by manipulation with the fingers through the wall of the rectum or through the vaginal wall, in certain cases which may also require the assistance of the knife, often is followed by the recurrence of normal periods of heat and that also may be the result when a persistent corpus luteum has been dislodged by similar rectal manipulation.

Such work can only be done effectively and correctly by a specially trained veterinarian. The bungler may do far more harm than good. For example, he may be unable to determine pregnancy and by dislodging a yellow body, the corpus luteum of pregnancy, will be likely to induce abortion.

Manipulation of the ovaries for rupture of cysts or dislodgment of yellow bodies is, however, only one part of the treatment of sterility. The womb in almost all instances is the true seat of disease and must therefore be skillfully treated by the veterinarian. That subject will be discussed in a subsequent article.

Obstructed Teat

We have a very good cow that came fresh about a week ago for the second time. Last year we noticed a small lump in the center of the teat where it joins the udder. This year it has enlarged so that we can get only a little milk every few minutes. What is the best thing we can do for this?

Lynden, Wash. C. B.

In such a case it is best to let a calf suck or dry off the milk secretion in the affected teat until the cow goes dry. Then an operation may be performed by a trained surgeon. It consists in cutting through the wall of the teat and dissecting out the growth. Great care has to be taken to prevent infection or the quarter may be lost. We have never found it safe practice to puncture such growths through the duct of the teat or to attempt removing them by pulling downward with a cutting cone-shaped instrument.

Mammitis

I have been troubled with a peculiar condition among my cows. The milk flow diminishes almost entirely for a few days and what does come has dark blotches in it. This has happened to four cows and two of them ate and chewed their cud as usual, while the other two were off feed for a day or so. This has not happened to all four at the same time but at intervals during the past year. When they come back to their milk flow they never milk as heavy as before. They seem to become gaunt. At present one of my best cows is troubled this way.

Winfield, Ia. C. M. L.

The disease is mammitis (garget) which may be due to one of many different causes. It is often a difficult matter to determine the cause so that it may be removed; but an investigation is necessary to that end, as prevention is far more important than cure. Some of the more common causes are: Infection by germs which causes the most serious attacks; coming in heat; chill; bruise; irregular, rough, or incomplete milking; lying upon cold, wet ground or upon bare concrete floors; prolonged, heavy feeding of protein-rich feed. Remove any cause of these that is found present. Keep cows from standing in water when hot from running and do not have them run home by dog or cow pony when their udders are distended with milk. Isolate and milk last all affected cows. Milk them three or four times daily at times of attack. Treat as often suggested here. If a graduate veterinarian can be employed it would be well for him to try the effects of treatment with mastitis bacterin.

For Barrenness in Cows, Mares and Sows, Use Hood Farm Breeding Powder

Astonishing Success in Making Barren Animals Breed — Indispensable After Abortion — Invaluable Where Cows do not Clean — Profitable to use on Every Cow After Calving.

Read what they say:

Hood Farm Breeding Powder is great and has been a God-send to me. I cannot be without it.

ABORTION IN CATTLE

CAN BE TREATED SUCCESSFULLY AND YOUR COWS MADE PROMPT REGULAR BREEDERS BY

STERILOID

STOP LOSING CALVES

TREATMENT: If STERILOID is used at the first sign of abortion the cow will go her full time and have a healthy calf. If your cows or heifers do not come in season, or fail to get with calf, use STERILOID. Cows get with calf after only one treatment. Write today for **FREE BOOK.** It explains the causes and symptoms of Abortion and tells how to treat Abortion, and make your cows regular, healthy breeders with STERILOID. Also contains letters from breeders who have used STERILOID successfully.

GUARANTEE: We will refund money in every case when STERILOID FAILS to make good. PRICE $1.00. Mailed Postpaid, in plain wrapper.

Seattle Milk Fight

HOARD'S DAIRYMAN:—Seattle's "Milk Fight" continues to be the center of interest to the Puget Sound dairymen of Washington State. The matter was further complicated when, on October first, one of the larger condensery concerns operating seven plants in the state announced the closing of two of their plants and a reduction from $2.90 per hundred for milk testing 3.8% to $2.50 per hundred for the same test. Seattle distributors are at present paying $3.65 per hundred for milk testing 3.6%, thereby recognizing a differential of $1.25 per hundred. Condenseries allow five cents per point over milk testing 3.6%.

In the face of this sharp decline producers are asking distributors to pay $4.17 per hundred for 3.6% milk, claiming that one market should have no effect on another. Distributors maintain that the differential is already too great, adding that eighty-five per cent of the milk produced in the Seattle shed goes into other than market milk channels.

In a letter sent to The Retail Milk Dealers' Association the mayor threatened to establish a central milk distributing station if the dispute between milk producers and distributors should interrupt the supply of the city. "The city is already engaged in undertakings which, in my opinion, are less justifiable than this would be under circumstances which will exist if the dispute between the producers and distributors is not settled without interrupting the milk supply of the city. This is not merely a temporary matter but it should be placed upon a permanent basis and accordingly prices must be stabilized. At the same time they must be fixed at such a figure as not to discourage production and shipment into Seattle," said Mayor Caldwell.

On Friday, October first, meetings with the producers and with the distributors by the mayor resulted in each side agreeing to abide by the decision of a milk commission for a period of one year, the commission to formulate a method for fixing the price to conform with market conditions prevailing at different periods of the year.

Each side expressed a desire to be represented on the commission. As now constituted it consists of Dr. F. E. Smith, Chief Dairy, Food, and Meat Inspector, representing the city; A. R. Priest, director of the Civic Affairs Bureau of the Chamber of Commerce and Commercial Club, representing the public; Joseph Passoneau, director of the Farm Markets Bureau of the State College, named by the mayor to act as advisor to the commission on the general problem of milk production and distribution which he has been studying in Seattle for several months; Thomas J. Owens, a dairy farmer residing at Kirkland and operating a producer-distributor business, representing the producers; and Glen O. Wallace, a milk dealer of Everett representing the distributors.

On Monday, October 4th, the commission began the collection of data. They will render a decision as soon as possible.

Little Extra Feed Makes Big Return

Further evidence that it is the well fed cow that makes the profit could be furnished, if necessary, by Elwin D. Myers, tester for the Sherburne County Cow Testing Association of Elk River, Minnesota. In his report for August to L. V. Wilson of University Farm, Minnesota, U. S. dairy representative, Mr. Myers says that as production had been very low, owing to the drying up of pastures, seven farmers out of 31 supplemented pasture grazing with additional feed. Mr. Myers vouches for the fact that the herds of the seven showed an average gain for the month per cow in butterfat of 5 per cent, while the cows of the other 24 herds which were not given any extra feed showed a decrease of 20 per cent.

"In most cases," says Mr. Myers, "the additional feed was small, two only of the seven farmers actually feeding grain, the other five feeding green fodder or running the cows on hay meadow. I feel positive that the seven herds would have shown a decrease similar to that of the 24 had they not been fed a little extra ration. On an average, the farmers who fed grain more than doubled their money in August on the additional feed that was used, besides putting their stock in better shape for late fall and winter months."

A demonstration plot of sunflowers near Carson, Grant Co., N. D., yielded 13 tons of fodder to the acre, while an adjoining field of corn yielded only three tons, according to R. C. Newcomer, agricultural agent in that county. Growing of sunflowers for fodder has been generally encouraged in the state by the Extension Division at the Agricultural College, and many good reports of yields are coming in from various parts of the state.

JEREY

The Queen of Dairy Cows

THE Jersey has been called the Queen of Dairy Cows. A better name would be the Queen of Dairy Profits. 200 years of scientific breeding has made her a butterfat producer without an equal in point of quantity and low cost. Never in the history of dairying have the advantages of the Jersey been so important to the farmer as they are today.

Year after year, records prove Jerseys to be the profit breed. The facts are worth a small fortune to any working farmer wise enough to be guided by them. Let us send them free.

The American Jersey Cattle Club
324-E W. 23d St.
New York

An Institution for the Benefit of Every Jersey Owner

Duroc-Jerseys Are Prolific and Profitable

They raise *big* families. Hardy, easy-feeding, quick maturing. That is why Duroc-Jerseys today outnumber any other breed in the United States. Out of *all* the hogs marketed in 1918, 51 per cent were Durco-Jerseys.

WRITE FOR BOOKLET—"DUROC-JERSEY HOGS ARE PROFITABLE"

published and mailed free by the largest swine record association in the world (over 10,000 members) for the benefit of hog raisers everywhere.

Dept. 300—PEORIA, ILLINOIS

Yearling Bull for Sale

Dropped June 21, 1919, solid fawn color, well grown, well bred toppy bull. Sired by a grandson of Mabel's Raleigh and Noble of Oakland. Dam is of Eminent breeding, R. of M. class AA—485 lbs. 15 oz. butter, adv. test 5.97%. This bull's pedigree is full of records and blue ribbons. For further particulars write,

W. M. KNIGHT, OAK GROVE JERSEY FARM

U. S. Accredited Herd. Eagle, Waukesha Co., Wisconsin.

Registered Bulls — $100 and Up

West View Farm offers registered Jersey bull calf, born April 15th, 1920 solid color and a good one. Dam now on test and making a good record. Double grandam made 609 lbs. butter in one year. Price $100.00 f. o. b. here. Also other bulls one to nineteen months old. Good ones priced right.

Registered Berkshire pigs eight to ten weeks old, $15.00 either sex. Also yearling sows. For size, type, and prolificacy you can't do better.

W. C. BROOKOVER, Route No. 1, Chandlersville, Ohio.

Dry Cool Storage Prevents Fruit Decay

That much improvement may be made in the home storing of fruits and vegetables by giving attention to the storage cellar or basement is pointed out by J. B. Keil, garden assistant at the Ohio Experiment Station.

The storage should be dry, cool, and well ventilated, he states. Spraying the walls with whitewash, to which an ounce of copper sulphate to one gallon of spray has been added, helps to destroy decay germs.

Cooling of the storage may be carried out in most cases by ventilation, windows being kept open during cool nights and closed in the daytime.

Fruit keeps in storage much better under uniform conditions of temperature, particularly apples. It is often possible to keep apples from three to four weeks longer than their regular maturing season by careful storing.—Weekly Press Bulletin, Ohio Experiment Station.

HOLSTEINS

We Are Now Offering

5 YOUNG BULLS, Pure-bred Holsteins, ready for light service, all nicely marked. Sire: Harkland Prilly Pontiac (171277), who is a 30-lb. son of Hark Prilly Colantha (192558). His sire, Tell Nudine Pontiac (110522). He carries 37½% same blood as K. P. Pontiac Lass (4418). These bulls are all out of A. R. O. dams with records from 15 to 27 lbs. We also offer a 4-YEAR-OLD BULL who is sired by a 26-lb. bull and out of a 26-lb. dam, average 4.82%. We guarantee this bull to be a sure breeder, gentle, nice to handle.

If you need a bull of this age you can't beat him and reason for selling him, we have 2 other aged bulls.

MAPLE LAWN FARM
C. A. Parks, Manager, Assumption, Ill.

My Consignment to the

Lake Mills Holstein Breeders Sale

October 27th

A Two-Year-Old Sire — Pine Row Pietertje Ormsby, No. 285761. Gentle and a sure breeder.

Sire of this bull is a son of Sir Pietertje Ormsby Mercedes from a 31-lb. granddaughter of Homestead Junior De Kol. The dam is now owned by John Irwin, has a 26.43-lb. record, is on yearly test, and is expected to finish with over 900 lbs. butter and 26,000 lbs. milk. Is a half sister to Pietertje Maid Ormsby.

This bull will make a fine sire for a good herd.

Two Females

Both of Show Quality and both winners at the Tri State Fair at Superior, 1920.

One a 4-year-old, and bred to Sir Ormsby Skylark Banostine, a double grandson of Sir Ormsby Skylark.

The other a heifer, sired by Sir Ormsby Skylark Banostine, her dam was picked by R. C. Pollock to be one of our foundation cows, so you know she is a good one.

The heifer is bred to the above bull to be sold — Pine Row Pietertje Ormsby — and will make a valuable addition to any herd.

Melvin C. Larson

Port Wing Wisconsin

Richland County Holstein Sale

Richland Center, Wisconsin

Saturday, November 6, 1920

A Quality Sale of 75 Registered Holsteins

The reference sires are leaders. Five of them have 30-lb. dams, one is a son and one a grandson of S. P. O. M.

Pabst Korndyke Arnold will be sold. His two nearest dams average 34.54 and all the dams in his pedigree average over 31 lbs. He is a son of Korndyke Segis Johanna, sire of Pabst Korndyke Cornflower, the world record heifer that sold for $30,000 in the national sale.

Other valuable consignments are: A number of large, fine looking cows due to freshen this fall from the noted reference sires.

Choice heifers from record dams.

Heifer calves such as you read about.

About fifteen bulls that are top notchers.

All cattle over six months of age have been tuberculin tested.

Wednesday, October 27th, 1920, Lake Mills, Wis.

Will be a Genuine Good Sale. We have Some Dandy Cattle. They are Choice, are Selected and Approved, and Guaranteed as Represented

We have the Dispersal of the Fred Alt Herd, Watertown, Wis. An accredited herd, of excellent type, and of the noted "Jones Breeding". ¶ A 26.08-lb. 4-year-old and her two daughters. ¶ A Yearling Daughter of a 20-lb. 3-year-old, sired by a 29-lb. bull. ¶ Two heifers sired by a Son of Canary Paul Fobes Homestead and Jessie Fobes 2d Maud Homestead, who is a twice 31-lb. daughter of Homestead Junior De Kol. ¶ A grand 22.36-lb. cow and her 10-month-old son. ¶ All the cows in calf to Sir Homestead Rose, a 30.18-lb. son of Homestead Junior De Kol.

Other Entries Include:

A dandy cow with 18.04 lbs. as a Junior 2-year-old, and who is a daughter of a 29.36-lb. cow.

Two sons of King Canary Oak De Kol, one from a 25.71-lb. dam, the other from a 28.92-lb. dam.

Daughters of a 31-lb. sire, King Korndyke Veeman Wayne, due right after the sale to a 32.68-lb. sire.

A 24.09-lb. son of King Pontiac of Brothertown.

A 23.65-lb. cow, two of her daughters and her sister.

A beautiful daughter of a 31-lb. cow, sired by a 35-lb. bull.

A Show cow, granddaughter of King of the Pontiacs.

Sons and daughters of the Show bull, King Segis Pontiac Isaac. A son of a 36-lb. sire. A dandy daughter of Sir Fan of Rock and bred to the 33-lb. Show bull, Woodcrest Clyde. A 19.25-lb. cow bred to "The Mighty Monarch", a 47.35-lb. son of King of the Pontiacs.

Some heifers from good record dams, sired by Senator Johanna White, one of Wisconsin's greatest Blue Ribbon Winners, and both bred to Johanna Kayewood Korndyke, a son of the 39-lb. cow, Kayewood Joyce Johanna.

You'll want them all.

Catalogs ready at Sale Time

Washington County
HOLSTEIN SALE

Fair Grounds, West Bend. Wisconsin
Wednesday, November 3rd
60 Registered Holsteins

Senior and Grand Champion Holstein bull, 1920, Wisconsin State Fair.
He was raised and developed in Washington County.

Individuality

This bull is a sample of Washington County Holsteins and of the ones to be sold in this Sale. Particular emphasis has been placed upon individuality in selecting these sixty head of Cattle.

Breeding and Production

A large per cent of the females of milking age either have good A. R. O. records or are from ancestors having creditable records. There are, too, quite a number of cows having splendid cow testing association records. Practically all the females of breeding age are in calf to such bulls as *King Veeman Pontiac Korndyke*, a 29.40-lb. bull whose dam also has 973.20 lbs. butter in a year. *Cedar Lawn Canary Paul 15th,* a 26-lb. son of this year's senior and grand champion bull at the Wisconsin State Fair. *Superba Prince Fayne Rag Apple,* a 31.54-lb. son of Rag Apple Korndyke 8th. *Sir Bess Ormsby Lass*, a 26-lb. son of Sir Pietertje Ormsby Mercedes 37th, Wisconsin's $100,000 bull and a bull who has 75% the same breeding as the $25,000 Sir Bess Ormsby Fobes, and a splendid son of *King Korndyke Colantha Ormsby.*

Entries of Special Merit

Two handsome heifers sired by Cedar Lawn Canary Paul, this year's senior and grand champion bull.

A son of a 25-lb. daughter of Cedar Lawn Canary Paul and sired by Harvest King Douglas, a 30-lb. bull.

Daughter of a 720-lb. cow and bred to a 31.52-lb. son of Rag Apple Korndyke 8th.

Son of Superba Prince Fayne Rag Apple, out of a 737.83-lb. cow.

Guarantees

All animals are to be exactly as represented by consignors and sold on a sixty-day retest guarantee.

50 Head Real Classy Holsteins

A dandy 29.31-lb. cow, daughter of Korndyke Abbekerk Johanna Lad and bred to King Korndyke Pontiac Alcartra.

A Junior Show Heifer, winner of many prizes this Fall, from a 19-lb. 3-year-old dam, sired by Senator Johanna White, a 30-lb. Show bull who has won more blue ribbons than most any other bull in the State, and in calf to a son of the 39-lb. Penn. State Champion.

A number of nice cows and heifers in calf to the two good bulls, Senator Johanna White and Johanna Kayewood Korndyke.

A 14.68-lb. Senior 2-year-old and a 16.58-lb. Junior 2-year-old bred to King Korndyke Pontiac Alcartra. Also some heifers sired by this bull.

Two heifers that will be worth a lot of money. They are both on yearly test, and are both in calf to a son of Pabst Korndyke Cornflower, the wonderful 38-lb. heifer, that lately sold for $30,000. One of these heifers has made 300 lbs. butter in 6 months, 10 days. Her dam is also on yearly test, and has made 13,379 lbs. milk and 531.25 lbs. butter in 8 months, 10 days. The other heifer has made 353 lbs. butter in 5 months, 22 days.

A fine, straight daughter of an 880-lb. cow, and in calf to a 30.45-lb. bull.

Fine heifers, straight as a string, one bred to a son of Sir Ormsby Johanna De Kol, some sired by Sir Pontiac Steijn Ormsby.

Show calves, and good ones too.

Work

HOARD'S DAIRYMAN:—Having been a "hired man" or farm hand a large fraction of my life before becoming a farmer, I read with interest any articles on the farm help problem.

There is no doubt but that the average hired man is more "particular" than he used to be twenty or thirty years ago, but so are other laborers. The standard of living has changed and none of us are satisfied with the comforts or conveniences of twenty years ago. Thirty-five years ago I began my apprenticeship as herder of cows at one dollar a week. Five weeks' work earned a suit of clothes made of shoddy material. Today a boy of that age could earn that amount of money in a day and a half, or in one or two weeks earn a better suit of clothes. At the age of sixteen I worked for twelve dollars a month. We were up before the sun and finished "chores" by the light of the lantern. Besides wages and board the hired men had their washing done, the latter to include not more than two pairs of socks and a work shirt per week. And yet farm hands at twenty and twenty-five dollars a month saved money and later bought land.

But that species seems to have disappeared from our little valley, and when baling or threshing time comes we do the only thing there is to be done—exchange work, and get the "women folks" to help some. Yes, on some of the largest ranches in our valley the older girls helped shock grain and bunch seed clover.

There seems to be little help for this problem until the people of the city realize that we ranchers, as employers, can not grant short hours that prevail in other lines of work, nor can we in any appreciable way lessen much of the hard, dirty work incident to farming. A berry grower has no trouble getting pickers for his berries. Pickers come with tents and autos and have a splendid vacation from the city, but the wheat growers' and the potato raisers' calls for help go unheeded.

Hugh Wiley, in the Saturday Evening Post, in his article, "Sweat or Die", sums up the case in these words: "Work is the cure. It is the only cure." Work, mind you, even such drudgery as cleaning stables or feeding cows (yes, even carrying silage from Dan to Beersheba) and not thinking of the "good light to read by" is the cure.

Facts in BLACK & WHITE

Purebred Holstein Cows Lead

After a 6-year study of dairy operations on over 20 farms in three different parts of Minnesota, Professor Cooper of the State Experiment Station finds that dairying is most profitable in the "Holstein Section" of the state.

In 1905 the average profit per cow was only $10.10. In 1909, it had increased to $38.45 per cow, or 43 per ct. on capital invested. Increase was due to improved herds, purebred Holsteins having been substituted for grade beef breeds. As soon as dairying is put on a systematic basis, the Holstein cow comes to the front. If facts and figures mean anything to you, send for our illustrated literature.

The Holstein-Friesian Association
101 Hudson Street, Brattleboro, Vermont.

Young Bulls Backed By Yearly and Seven Day Records

We have for sale a few young bulls, up to 11 months old that are sired by our senior herd sire Finderne Pride Johanna Korndyke. He is one of the best sons of King Segis De Kol Korndyke and from Finderne Pride Johanna Rue, former world record cow with 1470 lbs. butter in 1 year. Dam: three-fourths sister to an 870-lb. junior 2-year-old. Mostly white, $150. Herd under Federal Supervision.
BLUEBELL FARM, RICEVILLE, IOWA.

VERY HIGHLY BRED YOUNG Holstein-Friesian BULLS

and two heifer calves are offered for sale cheap. All are registered, tuberculin tested and sound. Write or see "LIVE FAIR" VIEW, Waverly, Iowa. Otto Brandenburg, Mgr.

Burgess Consignment Sale

October 27, Huntington, Ind.

50 Registered Holsteins

From the Herds of H. C. and C. E. Burgess, Ray Muker, I. F. Keisling & Sons, and Geo. P. Sneider

The Sale will Include:

Daughters of Col. Korndyke De Kol, a son of Pontiac Korndyke, whose first 17 daughters to be tested averaged 24.19 lbs. butter in 7 days as senior 3-year-old, with an average fat test of 4.26%.

That wonderful cow, Lenawee Calamity Pet will be sold. She has 5 seven-day milk records that average 765 lbs., the highest being 818 lbs.

There will be 8 cows bred to King Echo Sylvia Korndyke, a 40-lb. brother to the $106,000 bull.

King Quality Korndyke Fobes, the H. C. and C. E. Burgess herd sire, will be sold. His dam produced 32.5 lbs. butter, 717 lbs. milk in 7 days.

10 bulls ready for service are included, all of them from good record dams.

This is a wonderfully good opportunity to buy some real foundation stock at your own price. It is an opportunitv to get started with pure-breds that are heavy milkers and test high.

Every animal over 6 months of age tuberculin tested and sold subject to a 60-90 retest guarantee.

Sale held in the Huntington Co. Live Stock and Sale Pavilion

For catalogs address

H. C. Burgess, La Fontaine, Indiana

Auctioneer: W. F. Andrews, Beech City, O. S. T. Wood in the Box Lunch will be served.

Third Annual Sale

Porter County, Indiana, Holstein-Friesian Breeders' Association

50 Registered Holstein-Friesian Cattle

Consignment includes heifers and cows bred to or from sires of National note, such as:

Winterthur Ormsby

Seven nearest dams average:

Butter	7 days	35.84
Milk	7 days	630.23
Butter	365 days	1064.37
Milk	365 days	22491.54

Unaland Korndyke Hengerveld

Three nearest dams average:

Butter	7 days	29.03
Butter	1 year	1146.34
Milk	1 year	24151.80

Took second prize at Ind. State Fair 1918-19.

Creamelle Perfection

Grand Champion Indiana State Fair 1919. Breeding of the best blood lines.

King Korndyke Isabelle Veeman

His six nearest dams average: Butter 7 days, 32.77. Grand Champion Indiana State Fair 1918 and other fairs. A sire whose daughters are proving to be high producers.

Winterthur Sadie Vale Dosegis

His dam as a 2-year-old had a record of:

Butter	7 days	25.20
Butter	1 year	826.19
Milk	1 year	19116.00

Is a Grandson of King Segis Pontiac Alcartra and King Korndyke Sadie Vale.

Come to Porter County to get foundation cattle, where the Indiana State Champion cow is, where we have had 8 out of 10 best cows in the Cow Test Association in the State. Had the highest cow 8 months out of 12 in 1919.

Valparaiso, Indiana, October 30, 1920

Sale will begin at 12:30 o'clock sharp

Col. J. E. Mack, Auctioneer R. Austin Backus, Pedigree Man Chas. Ohlfest, Sales Mgr.

On Pennsylvania, Nickel Plate and Grand Trunk R. R. Auto Bus from Kouts and Wheatfield. For catalog write

Edinboro Lake Farm

Show Type HOLSTEINS Production

Six state yearly record champions 1918-19.

We offer bull calves by Sir Paul Veeman Hengerveld and Sir Ormsby Skylark Fredericka, out of yearly record dams with type.

Edinboro, Pa.

HOLSTEINS AT AUCTION

Send for information about the sales of healthy, reliable, registered cattle, held at Brattleboro, Vermont, the First Tuesday and Wednesday of every other month, Dec. 7-8, 1920; Feb. 1-2, Apr. 5-6, June 7-8, 1921. *Come to Brattleboro, the Holstein-Friesian Capital of America.* Address

The Purebred Live Stock Sales Company

57 BULLS

From four to eighteen months of age. All pure-bred, registered Holsteins carrying the blood lines, close up, of some of the greatest families of the breed. Send for new bull catalog just out giving description, pedigree, and price. If interested in females, ask for female catalog. Over 600 head in our herds.

WOODLAWN FARM, STERLING, ILL.

12 BULLS FOR SALE

Seven are ready to use. All are good individuals and nicely marked. Sires: King Segis De Kol Fayne 8th, a 25.63-lb. grandson of King Fayne Segis and Peidora De Kol Pontiac Pietertje, a 29.52-lb. grandson of King of the Pontiacs. Some have A. R. O. records. For pedigrees and prices write **C. I. Reamer, North Liberty, Ind.**

4 Holstein Bulls for Sale

All by King Segis Pontiac Cor-Will, 190512, whose sire is King Segis Pontiac, 44444, and whose dam is an A. R. O. daughter of Pontiac Korndyke. Also two fine young registered cows, one a granddaughter of Pontiac Korndyke. **Wm. N. Osborn, Wanatah, Ind.**

Have you talked with your neighbors about subscribing for Hoard's Dairyman? Why not do it now? Make up as large a club of subscribers as you can and send them in.

6 Good Cows For Sale

THE MINNESOTA KIND

They are all by a 36-lb. sire, are bred to a son of King Korndyke Colantha Ormsby, and are due to freshen this fall and winter. They are from 3 to 5 years old and absolutely straight and right. Lack of barn room forces us to sell. Write or come and see them.

E. J. Brosious, - Stillwater, Minn.

COME TO BISCAY

for your next purchase of pure-bred or grade Holstein cattle, mature or young stock. Large selection, also a few select male calves to offer. Located near station.

BISCAY SALES CO., BISCAY, MINN.

Sexauer Stock Farm

For Sale: A bull born Oct. 22, 1919. Outstanding individual, evenly marked in color. From a 27-lb. cow, 624 lbs. milk. He is sired by Woodcrest Pietje Clyde (33 lbs.) whose daughters, so far tested, averaged 19.25 lbs. as junior 2-year-olds. Write for other information and price.

John Sexauer & Sons, Belvidere, Ill.

Buffalo Creek Farm

Holsteins

We have for sale a bull calf born Dec. 11, 1919, evenly marked in color, from a 25-lb. cow that also has a good 10-month record. He is sired by a grandson of Sir Pietertje Ormsby Mercedes. Write for price and pedigree.

H. L. Bingham, Supt., Arlington Heights, Ill.

BULL CALF FOR SALE

Sire is a 27-lb. son of Johanna McKinley Segis, the 40-lb. bull that sold for $25,000. Dam is a granddaughter of Pearl of the Dairy's Joe De Kol with 78 A. R. O. daughters. Marking ⅛ white.

Long Distance Phone 389.

20 out of every 100 rationed *without cost*

ACCORDING to Government Experimental Stations, 20% of all grain fed *whole* to cattle is wasted. This is due to the fact that 20% of it is not digested.

But *ground* feed is entirely digested. Its use saves that 20% waste. The saving is equal to feeding 20 out of every 100 animals free. Also it means stock fattened several weeks earlier. Because it is more appetizing, the animals like it better, and digest all of it.

So use ground feed—feed ground the cheap, quick and easy way, with a Letz, the mill famous for its fine-cutting, its light-running, its durability, its capacity—famous for its patented self-sharpening, steel grinding plates, which cut, grind and pulverize all in one operation. These remarkable plates are guaranteed to outlast any 3 sets of ordinary plates.

The Letz grinds everything grindable—handles everything wet, dry or oily without heating or clogging—has hundreds of thousands of users to attest to its supremacy. Investigate.

Free. Two valuable books. One, our catalog; the other, a book on "Scientific Feeding." Every farmer and stock raiser should have them. Write at once.

POULTRY RAISERS *should write for important Letz literature on Feeding for EarlierPoultryProfits*

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Full Cheese Weights

Enjoining dealers in American cheese from refusing to pay cheese factories for quarter and half pounds, the Wisconsin Division of Markets Monday issued an order, effective at once, directing every cheese buyer in Wisconsin to pay for not less than the full amount which the cheese weighs at the time of weighing at the buyer's warehouse.

The practice existing for years in Wisconsin, under which approximately one million dollars are estimated to have been absorbed annually, was for the cheese buyers at producing centers, such as Plymouth and Marshfield, to pay for only even pounds and to either take the fractions of pounds without payment or make a flat deduction of 5/8 pound or 7/8 pound upon every box.

The cheese dealers maintained at the public hearing that the justification for failing to pay for fractions is the fact that cheese factories are marketing cheese which, because it is shipped too soon after making, shrinks in weight while in the hands of the dealer. The position of the Division of Markets, however, is that this loss should be offset by the payment of a lower price for such "green" cheese and that it is unfair to take fractions from every producer of cheese without regard to whether or not his cheese is in green condition.

The order, as issued, applies to all persons buying American cheese from the producers and to all selling agents of American cheese for the producers.

Violation of the order, unless it is set aside by the courts, is punishable by fine or imprisonment and—in addition—gives the party suffering loss from such violation the right to lay his case before the Division of Markets and recover twice the amount of his loss.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

A Message to the Cows

I'm thankful for the work you've done,
The summer record that you've made.
Hard work has mixed with dairy fun;
The milk has been of highest grade.
Our place has prospered—fortune smiled,
Our bank account is mighty fine.
And all your records have been filed,
Your work and mine!

I only know that through the year,
We two together, herd and me,
Have met each season, minus fear;
And faced the fights that were to be.
Each day the train has sped our wares,
Each hour the butter and the cream
Have won us wealth—have scaled those stairs
Which spell success of which men dream.

And now snow falls, the winter comes,
The meadows will not give you cheer;
Gone is the clover bee that hums—
The singing stream no longer here.
Snug in your barn I'd have you know,
I realize the part you play.
And while the fields are white with snow,
I give the herd its due, today.

The Dairyman's Philosophy

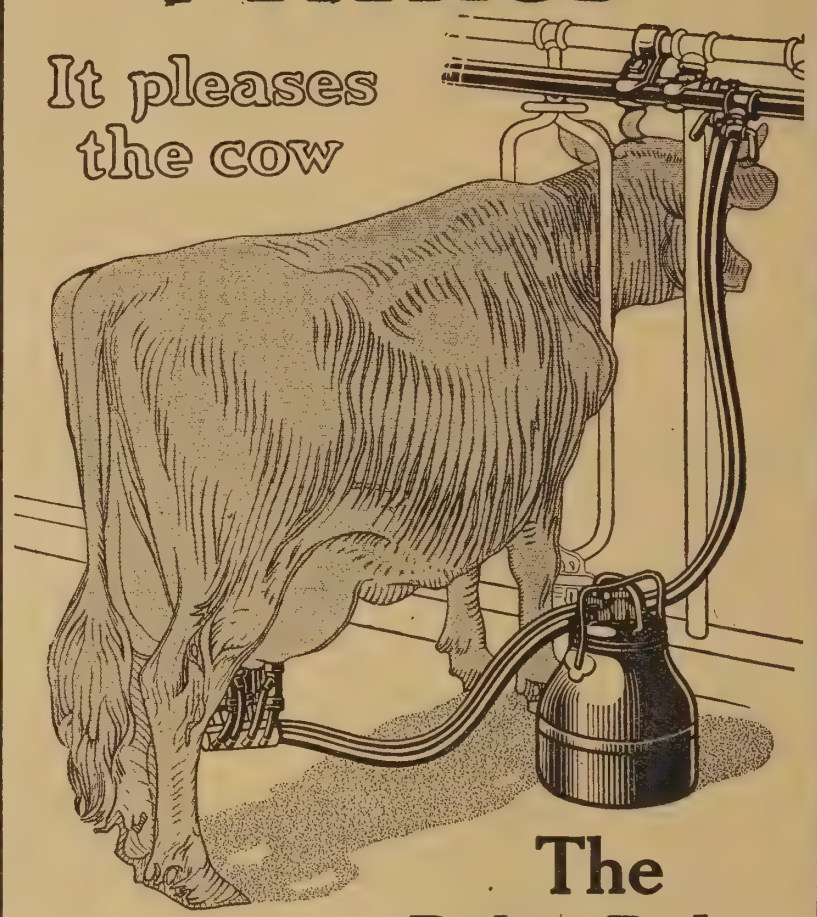
Don't think it's lonely in the country. The loneliest man on earth is the city man when things go wrong for a day.

Some folks must always get milk from a bottle that is left at their doorstep each morning. But milk is a blessing, no matter how you get it, or where.

"Brown has a wonderful baby."
"What makes you think so?"
"Well, the first word it ever said was 'Moo, Moo.' It's a true dairyman's daughter."

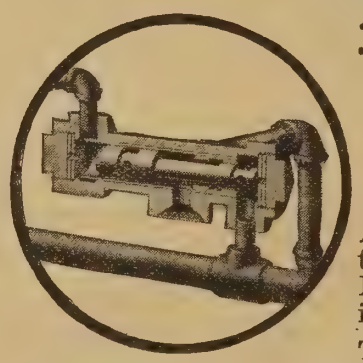
When it comes to paying wages, if you will only stop to think, the average farmer pays a higher rate and makes it more pleasant for the employee than any other employer on earth. And on top of all that, the man gets all the pure milk he wants to drink.

The New Cream Separator



The nervous waiting for it to arrive.
The wondering if it will really work.
The day the truck arrives.
The setting of it up in the dairy house.
The proud spirit of ownership.
The talk with the local agent.
The thoughts of next spring.
The unwillingness to wait.
The bringing in of five buckets of steaming milk.
The desire to have a try.
The super-knowledge of butterfat.
The sudden pang of past waste.
The profits that show in the pail.
The view of the cream.
The operation of the separator.
The willingness to admit that science knows.
The increased profits.

The arguments fly back and forth about milk. The prices are raised and raised again, and then lowered, and the newspapers are filled with stories. It is a most interesting topic. The only thing we know is that health and milk and growing children and sick people are inseparably connected with dairy farms.



Every cloud has its silver lining but some folks are so impatient they just can't wait for that side to turn out.

The De Laval Milker

It pleases the cow

The Pulso-Relay

(The Pulso-Relay is not shown in the part of the Milker installation pictured above. It is placed at regular intervals on the vacuum pipe)

Absolute regularity of action throughout a large Milker installation is very important and necessary.

The De Laval Milker is successfully used in large barns, and in several separate barns, only one power unit (the De Laval Pulso-Pump) being used. This is made possible by the invention of the Pulso-Relay; a small, simple device which is installed at regular intervals on the vacuum pipe.

This relaying of pulsations, maintaining absolute regularity, is made possible by the double pipe-line system. There is no interference anywhere between the continuous flow in the vacuum pipe, which draws the milk, and the pulsating movement in the pulsation pipe, which operates the Udder Pulsators. In this way, every cow throughout the installation is milked in the same regular, efficient way every day.

The De Laval Milker is a distinctly different type of milking machine. It is alternating, positive, uniform in action, and requires no adjusting of any kind. It is faster, more reliable and more sanitary than any other method of milking.

The De Laval Milker is sold with full knowledge of the fact that more is expected of it than of any other milker—due to the Company's reputation for service and satisfaction to users of De Laval machinery.

Write to nearest De Laval office for Milker Catalog, mentioning number of cows milked

AN ICE CROP IS NO FROST

The Winter Harvest Can Be Made to Yield Abundant Returns

C. A. LE CLAIR, WISCONSIN

FARMERS everywhere in that half of the United States north of a line cutting the southern boundary of Virginia and Missouri can harvest natural ice. It is a crop which does not take any fertility from the land and returns more to the acre than anything else a farmer harvests. The cutting of ice furthermore comes at a time of the year when other work is not pressing. Hence the cost of putting up the crop rests solely in the labor of gathering and storing it. In fact, in some instances, according to the women on the farm, no heavy charge against the ice crop can be placed for labor of gathering it. As one of them expressed it: "After the men folks have gathered up the year's supply of firewood I look forward to the ice harvest to keep them out of my way around the house."

Years ago quite a number of farmers looked upon the use of ice as more or less of a luxury. Today nearly all who have tasted of the joy of living concede it is a necessary commodity. Those who live in the country are beginning to see that, whereas city folks can buy perishable foods as needed, farmers must provide means of keeping a store of these things on hand. Thus the use of ice is actually more essential in rural communities than in cities. Nevertheless, although rivers, creeks, lakes, and ponds are everywhere to be found in the zone where natural ice grows within reasonable hauling distance of farms, there are still far too many who fail to harvest a profitable ice crop. In the New England states where dairymen ship milk and cream as much as five hundred miles to the city, few farmers are without ice harvesting equipment. In other sections of the country, farmers who will not dispense with ice in the summer haul it from town. Those who do this do not appreciate that the practice of carting materials from town does not as a rule tend to pay off a mortgage or help to make it possible to lay something by for a rainy day. To harvest an ice crop on the farm is just another way of cheaply bringing modern conveniences to add to the income and joy of living.

Once ice is used on the farm it can never be dispensed with. Whether dairy farmers sell whole milk or cream, the use of ice offers them a great advantage. Mr. J. B. Irwin of Wood Lake and Clover Farms, Minnesota, who sells bottled whole milk and cream of particular quality from his famous Holstein herd to the retail trade of the Twin Cities, employs plenty of ice to keep the product fresh for delivery. Immediately after the fresh milk is bottled, it is placed in crates holding a dozen bottles and the space between these is packed with crushed ice taken from a storage house just back of the milk house. The ice is renewed whenever necessary until the bottles reach the distributing station. As this dairyman says: "We have to credit a good share of the premium price that Wood Lake Farm milk brings to a generous use of ice. Our system of delivery would be impossible without it."

A farmer of Iowa County, Wisconsin, who produces some fifteen thousand pounds of thirty per cent cream a year, gets three and a half cents more a pound for his product by shipping it to Milwaukee than his local creamery offers. The use of ice makes possible this premium price for high grade cream. Aside from the advantage of having a supply for home use and other purposes on the farm, this winter crop offers a return of at least $450 a year.

In an eastern town, the superintendent of a milk and cream receiving station said of the value of ice on the farm: "From my experience here I can say that those of our patrons who do not use ice to cool their product and jacketed cans to haul it to the station lose as much as a dollar a day because of the discount we are obliged to make for sour goods. Other farmers who properly cool their goods sometimes bring in milk forty-eight hours old which is perfectly sweet."

The use of the old well as a refrigerator has passed. At best, well water seldom cools below fifty degrees Fahrenheit in summer, when most of the things we want cool should be kept at forty degrees. It is easiest and most economical to cool milk in the insulated tank which is held at about forty degrees by the use of ice. In using a well as a refrigerator, there is always the chance of spilling the beans, thus not only losing valuable produce, but also contaminating the water. Worst of all, the well is really not cool enough to give good results.

Amount to Store

The cost of securing a home supply of ice after the place of storage has been built amounts to simply the expenditure of labor necessary in putting up the ice, and breaking it out when it is needed. For the benefit of those who have or are making plans for putting up ice this winter, I wish to emphasize that it is far better to arrange for putting up more than enough rather than an insufficient supply of ice. In the northern half of the United States, the season for the daily use of ice extends from the first of May to about the first of October. For home use alone, from fifty to a hundred pounds a day will be needed on the average. To supply this, requires from five to ten tons of ice. On farms where cows are kept, it is well to figure on about one to two tons of ice per head additional, depending on whether cream or whole milk, respectively, is to be cooled. In addition, there should be made an allowance for shrinkage of the ice in storage of from one-fourth to one-half the ice stored.

Where twenty milk cows are kept and the cream only cooled, the total amount of ice that should be stored to meet all needs ought to be between forty and fifty tons. This would represent a block of ice approximately fourteen feet wide, sixteen feet long, ten feet high. To put up this amount would cost from twelve dollars to a probable maximum of fifty, depending upon the method of getting and storing the ice. In the South, where the farmers find it profitable to store artificial ice during the winter months when it can be manufactured cheaply, the cost of packing the summer supply frequently amounts to considerably more. The storage during the winter months of artificial ice for summer use is really economy of fuel in that it takes coal to make artificial ice. Hence, even beyond the zone where natural ice can be obtained, this practice is growing in popularity.

LIKE A VETERAN ICEMAN THIS FARMER IS USING A WOODEN PADDLE TO "CALK" THE PLOWED FURROWS WITH SNOW

This prevents water from the channel running down the furrows where its freezing would spoil many hours' work.

Ice House Construction

More than anything else, no doubt, a prevalence of wrong ideas as to the expense of erecting storage houses and the procuring of harvesting equipment has kept farmers from more generally putting up ice. Those who have had experience understand the simplicity of the equipment necessary. A serviceable storage place in the form of a structure having four firm walls and a good roof carrying a ventilator, and a few simple tools are all that is required for the successful putting up and storage of a good ice supply.

Fully ninety per cent of all who put up ice use insulating materials, such as sawdust, straw, and the like, to keep it. For this reason, a great deal that has been said and written about the details of constructing ice houses, having dead air space, cork, and other wall insulation, tends to prevent, rather than encourage, the storage of ice on the farm. Such structures are so costly that in localities where ice can be had for the making they are impractical.

After twenty years' experience in storing and handling ice under Wisconsin conditions, I have no hesitancy in saying that the most economical type of storage house for the average farmer is one built with a frame work of roughly hewn posts, such as in many cases can be secured from the woodlot. Two by fours spiked to these posts will form the plates and sills. The walls can be made by nailing a layer of rough boards to the inside of the studding and the outside can be finished with a layer of ship lath or siding. A door extending from the base to near the gable of the roof should be provided for facilitating the storage and removal of the ice. The roof should be built to provide a sweep of air beneath the eaves or through a ventilator so as to prevent an accumulation of moisture and an excessive radiation of heat within the house. If the roof is covered with a light colored type of roofing which will reflect the rays of the sun, radia-

(Continued on page 666)

IF AN ICE FIELD IS LAID OFF ON THE SQUARE AT THE OUTSET, PLOWING IS SIMPLIFIED AND THE CAKES BREAK OUT UNIFORMLY

ORDINARILY FARMERS CAN BUY ICE FROM CONCERNS HARVESTING BY POWER MACHINERY CHEAPER THAN THEY CAN CUT IT THEMSELVES

THE 1920 NATIONAL DAIRY SHOW

THE 1920 National Dairy Show held in Chicago October 7—16 was a great exhibition, well staged and effectively presented. In some respects it surpassed the thirteen which have preceded it. The dairy cattle in numbers and in quality worthily represented the five breeds; the record space of 100,000 square feet was occupied by dairy machinery with every improvement known to the world's leading manufacturers; the strictly educational exhibits excelled those of any previous year.

Yet the 1920 Dairy Show fell short of its mark—it failed to reach the dairy farmer. The show had everything but a crowd. It was like a great theater—well-rehearsed, with head liners aplenty—with no audience, a handful of people in the front rows and the galleries empty. The vacant seats unintentionally reproduced on the cover page of this issue bear mute testimony of the "small house" the important groups of cattle drew.

The big problem of the management of the Dairy Show is to get the dairy farmer to attend. Green County, Wisconsin, sent one hundred fifteen delegates by special train, an action all too conspicuous. Such delegations should be more common. When the Show was held at Springfield, Mass., farmers came in large numbers and the Dairy Show for the first time had an attendance to which it is entitled. It is generally agreed that Chicago is the logical place to hold this great national dairy event, but it is disheartening, at the end of fourteen years, to find so few farmers visiting this important and well presented dairy exhibition. We appreciate that dairy farming is a confining occupation and the lack of help makes it doubly hard for the dairy farmer to leave home. The educational exhibits, the display of dairy equipment, the well bred dairy cattle, the numerous meetings of national associations, the opportunities to meet men engaged in dairy farming and leaders in every branch of dairying, offered an occasion for the dairy farmer to gather useful information not excelled in any agricultural show in the world.

Something must be done to take the educational force of the show to the farm.

Since the inception of the National Dairy Show we have presented its meaning and its purpose to the dairy public. The following quotation taken from an editorial in the Chicago Tribune clearly indicates that the show has a real message. We quote:

"Go to the Dairy Show and see what applied science can accomplish in the perfecting of animal life and its products. It will help you to know what America is and what the West is. Chicago is the center of one of the greatest dairying regions of the world, one of the most progressive and useful of human industries, producing some of the most essential and valuable factors of civilized diet. You will see the competition of public and private agencies of the federal and state governments, the state universities, the great associations of breeders and dairymen, in the advancement of the industry. You will learn what the dairy means to agriculture and what it means to you and your children. You will learn a lot that will surprise and interest you and you will see in many beautiful examples what science has done for the perfection of dairy cattle."

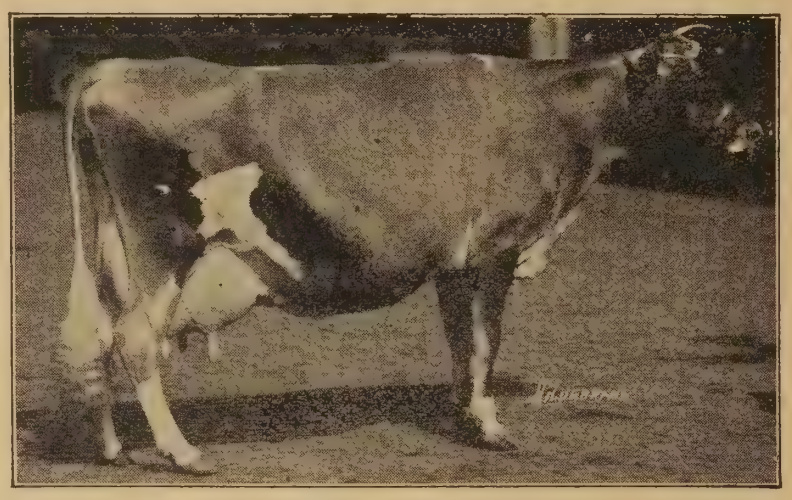
Foreign Exhibits

Two foreign governments took space for the advertisement of their dairy products. Argentina gave chief emphasis to its cheese and Denmark to its sweet, unsalted butter. The importance of foreign dairy products to the dairy industry of this country is apparent from the fact that during the past eight months 25,591,969 lbs. of butter have been imported, 13,775,434 lbs. coming from Denmark alone.

Judging Contests

Collegiate Judging of Cattle:—Teams of three students each from twenty-one agricultural colleges competed in the thirteenth national contest in judging dairy cattle. The states represented were: Connecticut, Indiana, Iowa, Kansas, Kentucky, Maryland, Massachusetts, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Carolina, South Dakota, Tennessee, Washington, and Wisconsin. The coaches served as a judging committee and were assisted by three breed judges for each breed. Three classes of four animals for each breed were judged, bulls, cows, and heifers.

The Kansas team led the contest with Iowa second and Kentucky third. Maryland won on Ayrshires, Nebraska on Guernseys, and Kansas on Holsteins and Jerseys. C. H. Young of Kansas was high man of the contest; D. C. Badger, Indiana, second; and W. H. Davis, Pennsylvania, third. R. W. Smith, Jr., of Massachusetts was high on Ayrshires; W. T. Gray, Nebraska, on Guernseys; E. J. Haslerud, Minnesota, on Holsteins; and G. M. Drumm, Kansas, on Jerseys.



The contest was conducted by the Dairy Division, Helmer Rabild acting as superintendent.

Collegiate judging of Products:—Five teams from as many states engaged in the products judging contest, winning in the following order: Ohio, Maryland, Iowa, South Dakota, and Indiana. Ohio won five of the seven awards, leading as a team on cheese and milk as well as in total score. South Dakota had the leading team on butter. A. H. Neu of Ohio made the highest rating in the contest; C. Farr of Iowa was second; and T. V. Armstrong of Ohio was third. J. H. Snyder of Maryland led in the judging of butter; Chas. Reynolds of Maryland in judging cheese; and C. Farr of Iowa in judging milk.

Boys' and girls' judging of cattle:—Fifteen states were represented in the contest in judging cattle by boys' and girls' club members. The contestants were selected for the various teams through competitions in their respective states. Two were girls. The states represented were: Delaware, Illinois, Iowa, Indiana, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Ohio, Pennsylvania, South Dakota, Texas, and Wisconsin. A class of bulls and a class of cows from the Ayrshire, Guernsey, Jersey, and Holstein breeds were judged. The placings and the written reasons were graded by a committee of two judges for each breed.

Missouri won the contest; Illinois was second; Texas, third; Maryland, fourth; and Indiana, fifth. Arthur Gwin of Missouri had the high score for the contest; Arthur Bennett of the same state was second; Clarence Doran of Illinois was third; and Jack Turner and Gilbert Wieting of Texas were fourth and fifth. Ralph McCardle of Indiana made the highest score on Ayrshires; Lowell Forbes of Missouri on Guernseys; Clarence Doran of Illinois on Holsteins; and Helen Greenlee of Ohio on Jerseys.

The contest was conducted by the Dairy Division.

SLY PUSS P, SENIOR AND GRAND CHAMPION JERSEY COW AT THE NATIONAL DAIRY SHOW
OWNED BY LONGVIEW FARM, MISSOURI

The Dairy Products Exhibit

The Dairy Products Exhibit was more successful than at any previous show, in that there were a larger number of entries in all products except American cheese and that the quality of the butter and cheese, particularly the Swiss and cottage cheese, was far above the average. This is the report of R. B. Stolty, superintendent of the exhibit.

There were fifteen entries from six states for whole milk storage butter, Carle Bergquist of Minnesota winning the gold medal with a score of 95. The hand separated storage butter had 48 entries from sixteen states. The gold medal was won by Julius Ramsey of Minnesota with a score of 95. The storage butter was shipped to Chicago on June 5th and held in storage until October 5th. It scored within one-half point of the fresh butter. The whole milk butter had 34 entries from ten states. John Jorgenson of Wisconsin won the gold medal with a score of 95½. There were 141 entries in the hand separated butter class from sixteen states, Carl N. Hansen of Illinois winning the gold medal with a score of 95½.

There were nine entries of dairy farm butter from eight states. The gold medal went to Sanitary Farm, Texas, with a score of 93½.

The honors for American Swiss cheese again went to Charles Knicker of Wisconsin with a score of 98. There were 18 entries from three states. There were nine entries of Brick cheese from four states, Wisconsin receiving the gold medal on the product of Jacob Disler with a score of 95½.

The American Cheddar cheese class was small, there being only 44 entries. Kielsmeier Co. of Wisconsin won the gold medal with cheese scoring 97½ and Hugh Barber of Oregon, second, on cheese scoring 97. There were ten entries of cottage cheese from five different states. The gold medal went to Carl W. Mork of Minnesota on cheese scoring 97.

Two judges were chosen, one from the East and one from the West. The butter judges were O. A. Storvick of Minnesota and C. W. Fryhofer of New York City; the American cheese was judged by E. L. Aderhold, Wisconsin, and Professor

HOLSTEIN CHAMPIONS AT NATIONAL, DOETJE NELLIE CONCORDIA, OWNED BY AITKEN BROS., WISCONSIN, AND CEDAR LAWN CANARY PAUL, OWNED BY BAIRD BROS., WISCONSIN

W. W. Fisk, New York; Fred Marty of Wisconsin judged the foreign cheese.

Two Educational Exhibits

Two educational exhibits of commendable merit were those from the University of Illinois and the boys' and girls' calf club of Winnebago County, Wisconsin.

In the former, cows were exhibited to show "what a good bull did". They were the daughters of the Holstein sire, Emblagaard Tritomia Homestead, owned and kept in service until his death by the University. The daughters exhibited are all very heavy producers and have exceeded their dams' records. The get of this bull averages to produce 3,907.7 lbs. milk, 160.65 lbs. fat more than their dams. This gratifying instance of a good bull being retained in service rather than slaughtered, as too often happens, was well worth while in an educational way.

The youngsters from Winnebago County, representing a membership of 100, showed their calves and explained the club work to inquiring visitors. The quality of the calves is attested by the red ribbon won in the open classes by Arthur Haese on his Brown Swiss heifer.

Department of Agriculture Exhibit

The Department of Agriculture rang the bell on exhibits this year. It put up the best educational display on dairy farming and manufacturing practices the writer has ever seen. A dairy farmer's week was well spent if he put in his entire time there. A dairy industry fully awakened to its opportunities would so quickly avail itself of the services proffered by the Department that its present facilities would at once prove wholly inadequate.

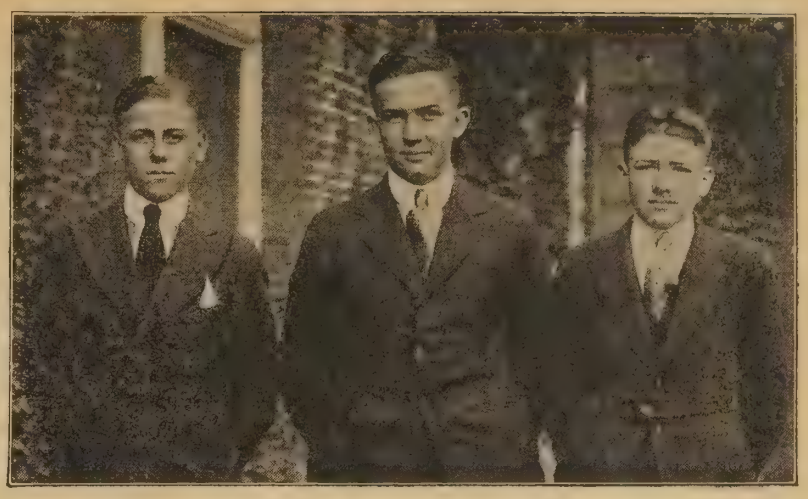
The recommendations made are practical and to the point. To illustrate their workings the Grove City community of Pennsylvania was reproduced in miniature and the actual results obtained there were shown. The Dairy Division holds that in the development of a dairy community "a profitable market is the first essential". A few years ago practically no dairy products were shipped out of Grove City. The creamery development there under the Division's assistance has built an industry which sent out $508,810 of dairy products in the year ending June 30, 1920. The market made by the creamery includes butter, condensed milk, casein, and five types of cheese. Where there was no community dairy organization there are now three breed associations, 387 tuberculin tested herds, two bull associations, 440 cows in testing associations, a cattle sales association, and boys' and girls' calf clubs.

The activity of the Grove City National Bank has so greatly benefited dairying that a bank booth was established at Chicago that Mr. E. B. Harshaw, cashier, might explain how other banks may help their communities.

Cow testing association charts gave explanation of this movement which has proved so profitable in record keeping. It was stated that 468 of these associations were in operation July 1 of this year. Statistics from 110 show the average production of cows within associations to be 246 lbs.; that for cows outside was said to be below 160 lbs.

A chart presented the wide differences in production in herds. Two herds in the same association the same year illustrated this. One averaged a production of 306 lbs. fat, the other, 155 lbs.; the average cost of feed for the first was $67.56, for the second, $61.72; the average income over cost of feed for the first was $74.92, for the second, $.62.

To further show the relation between production and profit, that the heavy milking cow is the money maker, figures from 100 testing associations with 16,416 cows were presented as follows:



Ave. butterfat production, lbs.	Ave. income above feed cost
100	$ 9
150	25
200	39.50
250	**54**
300	70
350	84
400	98
450	115
500	**126**
550	136
600	157

The following figures from 16,416 12-month records illustrated the fact that with the dairy cow, "the more she eats, the more she gives, and the more she gives the greater the profit."

Ave. cost of feed	Ave. income over feed cost
$40	$ 30
50	55
60	94
70	127
80	136
90	156

A summary of 11,130 twelve-month records indicates pretty clearly that the cow which freshens in the fall is the heaviest milker. The table below shows how much she out-produces cows calving in other seasons.

Season	Ave. lbs. fat produced	Ave. lbs. milk produced
Spring	236	5,775
Summer	234	5,863
Autumn	267	6,591
Winter	254	6,338

WINNING TEAM IN THE JUNIOR DAIRY CATTLE JUDGING CONTEST
Left to right: Arthur Bennett, Arthur Gwin, and Lowell Forbes, the Missouri team.

MORTON MAINS LORD BARRYLYNDON, SENIOR AND GRAND CHAMPION AYRSHIRE BULL AT THE NATIONAL DAIRY SHOW
Owned by Alta Crest Farm, Massachusetts

Information was given concerning the organization and operation of bull associations. On July 1, of this year, there were 120 of these organizations in use.

An old fashioned guessing contest was run—the same one which cuts the profits on farms where no records are kept. Twelve cows were shown whose yearly production is known and visitors were asked to choose which they would keep and which they would cull on appearance. The writer turned down a cow which it was shown has produced 15,000 lbs. of milk in a year. The readers of Hoard's Dairyman who did not guess at Chicago will have opportunity to find whether they can do better, for the pictures of the twelve cows will be reproduced in a forthcoming issue.

Catchy, attractive exhibits put across the "Use more milk" idea and told "why" and "how". The statistics on dairy products consumption in the United States as compared with that in other countries gave evidence of the need of increasing the use of butter and cheese in this country. The data below offers a chance for interesting comparisons on per capita consumption per year:

Country	Lbs. butter	Lbs. cheese
United States	17.5	3.8
United Kingdom	17.0	11.2
New Zealand	21.7	3.0
Australia	25.6	4.8
Argentina	1.7	2.9
Italy	2.5	4.8
Switzerland	12.1	26.4
Norway	14.0	7.1
Canada	16.3	3.0
Sweden	16.5	
Netherlands	16.8	13.2

Breed Associations Represented

Four of the national breed associations maintained headquarters at the show; the Ayrshire and Jersey organizations in attractive booths, and the Holstein and Guernsey in exhibits of their extension work.

With the Holstein-Friesian Association of America were six state association spaces, for New York, Illinois, Ohio, Minnesota, Michigan, and Wisconsin. The slogans of these states, as shown in their exhibits, are worth recording: New York, "the nursery of the breed"; Illinois Holsteins, "the safest investment for foundation stock"; Ohio advertised, "Two big eye-opener sales"; Minnesota Holsteins, "type—health—production"; Michigan Holsteins have "health, quality, production, and breeding"; Wisconsin, "the cradle of the breed".

The most striking association exhibit was that of the American Guernsey Cattle Club. Instead of the usual booth, the work of the Boone County Guernsey Calf Club of Indiana was presented. Fifteen Guernseys owned by fourteen club members were on exhibit as a suggestion of a means by which the breed may be introduced in a community and by which it may be used in building the community itself. Four of the first importation to Boone County were shown with six calves from

FIRST PRIZE GUERNSEY EXHIBITOR'S HERD, INCLUDING THE GRAND CHAMPION COW, IMP. MILDRED II OF LES GODAINES, OWNED BY JONES & McKERROW OF WISCONSIN

that importation and five calves of the second importation. In the open classes those shown won a third, a fourth, and a fifth prize.

The members themselves were present to explain the club work and tell how other clubs can be organized. They stated that scrub bulls are being supplanted by pure-breds from the club heifers and that there is a waiting list for these bulls. The exhibit was effective, being valuable to visitors to the show, to the Guernsey breed, and, perhaps most of all, to the club members themselves.

The Cattle Show

Six hundred eighty-two cattle were on exhibit at the 1920 National. The success of the cattle show in no small degree resulted from the state herd idea which induced a host of small breeders of Holsteins and Guernseys to bring in an animal or two. Not only did this greatly increase the numbers vitally interested in the awards but it virtually made the show by greatly adding to the entries.

When breeders declared when they finally got their cattle out of the stock yards in 1914—15 that they would never exhibit there again, experience with foot and mouth disease surely gave them good excuse. Another health condition which is in the long run quite as important has brought forth individual complaint but no united action. That is the lack of ventilation of the cattle barns. On such years as this, no animal is safe in the close, humid air of the barns. At least five head died, a number more were sick and taken to the hospital, while the general health of many more was not good. The judging arena and the barns should be ventilated. The expense would not be excessive. Breeders cannot afford the chances of cattle pneumonia in such quarters; for its future, the show should be where its surroundings are healthful.

Ayrshires

Ayrshires drew their full share of attention. No breed makes a better display in the show ring than the red and whites. Six herds contributed ninety-five head of well fitted representatives of the breed and made a showing which compared favorably with that of former Nationals. Wendover Farm of New Jersey made the heaviest winnings, being not only premier exhibitor but also premier breeder, an honor which had gone to the Adam Seitz herd of Wisconsin for the nine preceding shows. The championships went to three herds: Alta Crest Farms of Massachusetts taking senior and grand for males; Scitz, senior and grand for cows; and Wendover Farm, both juniors.

When the executive committee of the Ayrshire Breeders' Association met to select a judge for the 1920 windup show of the circuit they failed to agree upon a choice. Thereupon they elected to discover whether Scottish judges and those in America agree in their choice of type. When Hugh W. B. Crawford, a successful dairy farmer and breeder of Scotland, selected for the task of placing the ribbons, had finished his work, it was pretty clear that there is some disagreement.

There was no disputing the ranking given the aged bulls. Foulton Ambassador, Wendover's herd sire, excelled Auchenbrain Toreador, Middlesex Meadows Farm entry, more clearly than at the Eastern States Exposition in masculinity, depth of chest and middle, and at the walk. Auchenbrain Toreador is straight lined, stylish, and in excellent condition but is too much off the ground and too shallow in body to win. Cavalier's Lord Roseberry lacks virility and masculinity and is not strong enough in his top line to be a close contendor. Mr. Crawford credited Alta Crest Farms' two-year-old, Lessnessock Searchlight, an easy winner in his class, with being the "finest shouldered bull of the day", but saved his chief praise for Morton Main's Lord Barrylyndon Imp., from the same herd, a three-year-old which he placed over Foulton Embassador in the senior championship struggle, the most closely contended placing of the day. This bull he credited with a neater shoulder and the likelihood of his making a larger bull at maturity than Wendover's Springfield grand champion. A choice was wholly a matter of type, the winner being a little more American in his form, while Foulton Embassador is more like Scotch show ring winners. Wendover Ambassador had no competition in the senior yearlings but has the form to meet lots of it successfully. He won easily from Seitz's Cavalier's Sherry Redman, junior champion at Waterloo, but lost in the finals to the three-year-old. Mr. Crawford's choice in the junior yearlings left the excellent young bull, Southcraig Imperial, Middlesex Meadows' Springfield junior champion, in second place, a judgment in which few agreed.

The aged cows, nine in number, were a difficult lot, falling short of the average usually set by the breed. Ardyne of Hill Top, Wendover's Springfield grand champion, led the class not so much on her excellencies as because she lacked the faults of the others. For example, her stablemate, Westburn Royal Rose, said by the judge to be the "most handsome in the class" was deficient in udder and went to fifth place. Chapmanton Nell 3d, from the Seitz herd, the choice of part of the ringside, showed too much weakness in her pasterns, loin, and udder attachment to lead. She went to sixth place. Middlesex Meadows took second and third on White Heather of Highland and Maple Leaf Jean. Alta Crest won the four-year-olds, Seitz the three-year-olds, and Wendover the two-year-olds. Mr. Crawford seemed to place chief emphasis on teats in the choice for senior and grand champion female, selecting Seitz's three-year-old, Barclay's Nightingale. She has the least Ayrshire quality of any National champion of the breed in many years. Wendover furnished all four first prize junior females, the senior calf, Ambassador's White Heather of Wendover Farm, being chosen for junior champion.

The detailed winnings follow:

Bull 4 years or over—1, Wendover Farm on Foulton Ambassador; 2, Middlesex Meadows Farm on Auchenbrain Toreador; 3, Seitz on Cavalier's Lord Roseberry. Bull 3 years or over—1 and 2, Alta Crest Farms on Morton Main's Lord Barrylyndon and Howie's Topnotcher; 3, Aldebaran Farms on Friendlesshead Victor; 4, Simmons on Cavalier's Goldfinder. Bull 2 years and under 3—1, Alta Crest on Lessnessock Searchlight; 2, Seitz on Cavalier Silver Mint. Bull 18 mos. and under 2 years—1, Wendover on Wendover Ambassador. Bull 1 year and under 18 mos.—1, Wendover on Wendover Circulation; 2, Middlesex Meadows on Southcraig Imperial; 3, Seitz on Lady Geneva's Wonder Boy. Bull calf 6 mos. and under 12—1 and 4, Seitz on Cavalier's Sherry Redman and Cavalier's Cupbearer; 2, Alta Crest on Alta Crest Footlight; 3, Wendover on Ambassador's Circulation of Wendover. Bull calf under 6 mos.—1, Seitz on Cavalier's Ping Pong; 2 and 4, Wendover on Foulton Ambassador 2d and Wendover Ambassador 2d; 3, Aldebaran on Aldebaran Hugh; 5 and 6, Middlesex Meadows on Nona's Middlesex Chancellor and Middlesex Royal Champ.

Cow 5 years or over—1 and 5, Wendover on Ardyne of Hill Top and Westburn Royal Rose; 2 and 3, Middlesex Meadows on White Heather of Highland and Maple Leaf Jean; 4, Alta Crest on Barbeigh White Legs 5th; 6, Seitz on Chapmanton Nell 3d. Cow 4 years and under 5—1, 3, 4, Alta Crest on Douglas Hall Dandy 2d, Craigley Blue Bell, and Craigley Ann 11th; 2, Wendover on Nethercraig Buttercup; 5, Aldebaran on Craigley Ada. Cow 3 years, under 4—1 and 6, Seitz on Barclay's Nightingale and Howie's Glen of Valley View; 2, Alta Crest on Craigley Lilly 4th; 3 and 5, Wendover on Barclay's White Flora 3d and Nethercraig Snowflower; 4, Middlesex Meadows on Evamere's Bertha. Heifer 2 years and under 3—1, Wendover on Wendover Brown Canary; 2 and 6, Middlesex Meadows on Ringmaster's Britta of Brae Burn and Bargenoch Dewdrop 2d; 3 and 4, Alta Crest on Garlaff 2d and Inhytewollen Flower 2d; 5, Seitz on Cavalier's Silver Queen. Heifer 18 mos. and under 2 years—1, Wendover on Wendover Gay Lass; 2 and 5, Alta Crest on Tower Brown Lady 6th and Netherton Primrose; 3, Seitz on Cavalier's Creampot of S. C. 2d; 4, Middlesex Meadows on Middlesex Maid; 6, Aldebaran on Violet Finlayston 2d. Heifer not in milk, 1 year and under 18 mos.—1 and 6, Wendover on Wendover Crusader's Princess and Wendover Farm Spicy Lady 2d; 2 and 5, Alta Crest on Whitehill Lady Rose and Alta Crest Heather Bell; 3, Seitz on Netherhall Kathleen 2d; 4, Aldebaran on Aldebaran Blossom Again. Heifer calf 6 mos., under 12—1 and 4, Wendover on Ambassador's White Heather of W. F. and Ambassador's Yellow Kate of W. F.; 2 and 5, Alta Crest on Alta Crest Cheer and Alta Crest Fi Fi; 3, Middlesex Meadows on Alta Crest Mist; 6, Seitz on Cavalier's Lila Lee. Heifer calf under 6 mos.—1, 4, 6, Wendover on Nethercraig Purple Heather, Wendover's Ambassador Gay Lass, and Wendover White Lady; 2, Seitz on Cavalier's Ella; 3, Middlesex Meadows; 5, Aldebaran on Aldebaran Victoria. Cow having official yearly record begun at 5 years or over—1, Middlesex Meadows on Maple Leaf Jean; 2, Wendover on White Heather of Torr; 3, Seitz on Chapmanton Nell 3d. Cow having official yearly record begun under age of 5 years—1, Seitz on Barclay's Nightingale; 2, 5, 6, Wendover on Barclay's White Flora 3d, Netherton Brown Canary 5th, and Douglass Monarch's Princess; 3 and 4, Middlesex Meadows on White Heather of Highland and Thistledown Hobsland 2d.

Advanced registry cow with two of her progeny—1, Wendover on produce of Netherton Brown Canary 5th; 2, Seitz on produce of Beuchan Lady Lofty. Get of sire—1, Wendover; 2, Alta Crest; 3, Middlesex Meadows; 4 and 5, Seitz. Produce of cow—1, 3, and 5, Wendover; 2, Seitz; 4, Alta Crest; 6, Middlesex Meadows. Exhibitor's herd—1, Wendover; 2, Alta Crest; 3 and 5, Seitz; 4, Middlesex Meadows. Young herd—1, Wendover; 2, Alta Crest; 3, Seitz. Breeder's calf herd—1, Seitz; 2, Wendover; 3, Alta Crest. Dairy herd—1, Wendover; 2, Middlesex Meadows; 3, Alta Crest; 4, Seitz.

Senior and grand champion bull—Morton Main's Lord Barrylyndon. Junior champion bull—Wendover Ambassador.

Senior and grand champion cow—Barclay's Nightingale. Junior Champion Cow—Ambassador's White Heather of W. F.

KANSAS COLLEGIATE DAIRY CATTLE JUDGING TEAM, WINNERS IN 1920 CONTEST
From left to right: Coach H. W. Cave, R. H. Lush, G. M. Drumm, C. H. Young.

Guernseys

One hundred seventy-seven Guernseys—approximately 55 exhibitors from 9 different states—most of the entries up to the standard of what National Dairy Show entries should be, and with Wisconsin and Iowa the heaviest winners. That in brief describes the 1920 Guernsey exhibit.

The showing this year was a good one, including as it did representatives of some of the best herds in Minnesota, Iowa, Wisconsin, Illinois, Indiana, Michigan, Ohio, New York, and Vermont. It was a particularly good showing for the middle west states and if only the state herd idea would be pushed harder in the eastern states another year the Guernsey showing at the 1921 National could be made second to none.

This is the first time in the history of the show that there has been a class for state show herds and its effect on the entire show was marked. It brought out the small exhibitor with one, two, or three entries, just the man who should be encouraged to show his good ones. Five state herds were needed in order to insure the class, and the entries from Iowa, Wisconsin, Minnesota, Illinois, and Ohio just made it possible. When they were finally lined up the herds were placed in the order named, this in spite of the fact that both grand champions were from Wisconsin. Mildred II of Les Godaines, Jones & McKerrow's grand champion cow, as well as a few other good ones, were left out of the state herd because of a ruling which prevented any exhibitors from showing more than two animals in class.

Some of the ringside dope was upset in the very first class, the aged bulls,

and that upset in turn led to a second in the championship decision.

Among the six aged bulls the real fight was between Imp. Itchen May King, owned by F. E. Fox and Goodhand Kingston & Son, and Ladysmith's Cherub owned by D. D. Tenney of Minnesota. These two have been pitted against each other several times at previous Nationals and each time the latter has been the victor. This time the tables were turned and the Wisconsin entry took the blue by virtue of his better top, and the fact that he showed just a little better finish, this in spite of a slight lameness. The Minnesota entry's head did not please the judges as well, he showed a little low over the loins and poor at the hocks.

Cherub's Prince, owned by W. W. Marsh, Iowa, and F. J. Rueping and Chas. L. Hill, Wisconsin, was an easy winner among the three-year-olds. When it came to senior champions the battle royal was between the last named and the aged winner. Grace's Memento, Jos. Golinvaux's winning two-year-old, although a good one, did not have an outside chance with the older entries. The final decision was in favor of the aged bull, Cherub's Prince going down to defeat for the first time, and because of his rather plain head, throatiness, and his poorer back.

W. W. Marsh's Golden Laddie of the Prairie, a junior yearling, was junior champion but not good enough to beat the aged bull for final honors.

Both first and second places in the aged cow class went to Wisconsin entries and it so happens that both were formerly owned by Edgemoor Farm of California. Imp. Mildred II of Les Godaines, Jones & McKerrow's cow, stood first with Imp. Donnington Goldie 5th, Mr. Rueping's entry, pushing her hard for the place. The latter is a longer bodied cow and carries a much better udder, but she did not possess the same splendid type of body or the veining of the first, nor is she quite so good about the head.

"Mildred" was senior champion, winning over Engleside Pretoria Vrangue, Mountain Bros.' four-year-old; Adell of Burnham Beach, L. E. Hagemon & Sons' winning three-year-old; and Century Girl of Edgemoor, first prize two-year-old owned by Jones & McKerrow.

Honey Bloom of the Prairie, Marsh's wonderful senior yearling, undefeated in her class or for junior championship this year, lived up to past performances and was an easy junior champion. There were those, too, who would, perhaps, have made her grand champion, but her excellence was not enough to counterbalance the maturity and finished quality of the aged cow which was made grand champion for the seventh consecutive time this year.

Some splendid groups were out, chief among them thirteen gets of sire, and it is noteworthy that first, second, and third in this class went to the get of Cherub's Prince owned by Marsh, Ladysmith's Cherub owned by Tenney, and Imp. Kitchener's Express owned by Mountain Bros.—three sons of Imp Hayes Cherub 2d. Mountain Bros. of Iowa won three of the four cups offered, on best two-year-old bred by exhibitor, best produce bred by exhibitor, and best get bred by exhibitor.

H. H. Kildee of Iowa did the judging with James Robertson of Maryland acting as advisory judge.

Following is a complete list of awards:

Bull 4 years or over—1, Fox and Kingston on Imp. Itchin May King; 2, Tenney on Ladysmith's Cherub; 3, Jones and McKerrow on Bonnie Boy of Riverdale; 4, Mountain Bros. on Kitchener's Express; 5, Kingston on Hopeful of Edgemoor; 6, White on Starlight's Excelsior of Jean Duluth. Bull 3 years and under 4—1, Marsh, Hill, and Rueping on Cherub's Prince; 2, Jones and McKerrow on McKerrow's Chene King; 3, Woodbury on Pencoyd's Secret Marose. Bull 2 years and under 3—1, Golinvaux on Grace's Memento; 2, Woodbury on Rose's Golden Cherub of the Prairie; 3, Hughes on Betty's Prince of Prospect Hill; 4, Ebels on Starlight of Bon Ayre. Bull 18 mos. and under 2 years—1, Dairyland Farm on Lalla's Prince; 2, Wick on Daphne's Crusader; 3, Emmadine Farms on Emmadine's May King; 4, Donnelly on Folly Noble; 5, Mountain on Simplicity's Winer of Iowanola. Bull 1 year and under 18 mos.—1, Marsh on Golden Laddie of the Prairie; 2 and 4, Tenney on Cherub's Pearl Royal of Shorewood and Dots Cherub of Shorewood; 3, Sass on Pergue's King Ultra; 5, Fisher on Victor's Duke of Thorne Hill; 6, Jones and McKerrow on Dora's King. Bull calf 6 mos. and under 12—1, Golinvaux on C. C. Memento; 2 and 6, Marsh on Prince Charming of the Prairie and Blossom's Prince of the Prairie; 3, Sass on Pergue's Ultra King; 4, Kingston on Hopeful's Steadford of Muskego; 5, Van Huss on Dividend's Kitchener; 7, Mountain on Lilly's Express of Iowanola. Bull calf, under 6 mos.—1, Woodbury on Deanie's Marose of Appletree Point; 2 and 4, Kingston on Warrior of Muskego and Aristocrat of Muskego; 3, Marsh on Excelsior of the Prairie; 5, Hagemon on Floridale Gen. Washington; 6, Mountain on Lydia's Express of Iowanola.

Cow 5 years and over—1, Jones and McKerrow on Mildred II of Les Godaines; 2, Rueping on Donnington Goldie 5th; 3, Babson on Colongue of Ellerslie; 4, Kingston on Sonack of Hillstead; 5, Conklin on Cifs; 6, Jones and McKerrow on Bordeaux of Courtil Bree. Cow 4 years and under 5—1, Mountain on Engleside Pretoria Vrangue; 2, Frissell on Susie of Skillet Creek; 3, Dairyland Farm on Velma of Mapledell; 4, Sass on Pergue's Coltie Lass. Cow 3 years and under 4—1, Hagemon on Adell of Burnham Beach; 2 and 3, Mountain Bros. on Ingleside Pretoria Queen and Simplicity's Glenwood of Iowanola; 4 and 6, Woodbury on Fisherman's Ellerslie and Duchess of Prospect; 5, Jones and McKerrow on Kate of Aurelian Farms. Heifer 2 years and under 3—1, Jones and McKerrow on Century Girl of Edgemoor; 2, Mountain on Lady Ruth of Iowanola; 3, Nelson on Boone's Daisy; 4, Tenney on Cherub's Ultra May Rose of Shorewood; 5, Mountain on Imogene of Iowanola; 6, Kingston on Itchen Queen of Edgemoor; 7, Jones on Boone's Bright Rose. Heifer 18 mos. and under 2 years—1 and 2, Marsh on Honey Bloom of the Prairie and Golden Locks of the Prairie; 3, Jones and McKerrow on Eidelweiss of Edgemoor; 4, Mountain Bros. on Frolinda's Lavetta of Iowanola; 5, Gilbert on Imogene of Sarnia; 6, Kingston on Lillian of Edgemoor. Heifer not in milk, 1 year and under 18 mos.—1, Marsh on Princess Pretoria of the Prairie; 2, Kingston on Wonder Girl of Muskego; 3 and 4, Jones and McKerrow on Spring Maid of Edgemoor and Dancing Girl of Edgemoor; 5, Emmadine on Masher's Gladys of Emmadine; 6, Woodbury on Nancy's Betsey of Belleview. Heifer calf 6 mos. and under 12—1 and 3, Marsh on Sensation of the Prairie and Honeydew of the Prairie; 2 and 4, Jones and McKerrow on Hopeful's Miss of Sunny Slope and Ultra Rosie of Sunny Valley; 5, Steele on Lassie of Maple Wood; 6 and 7, Mountain on Kitchener's Pet of Iowanola and Polly May Betty of Iowanola. Heifer calf under 6 mos.—1, Tenney on Shorewood Lady La Verne; 2, Jones and McKerrow on Chene King Northern Lady; 3, Woodbury on Appletree Point's Dolly Dimple; 4, Morris Crane; 5, Marsh on Mayflower of the Prairie; 6, Kingston on Wonder Dame of Muskego. Cow having official record begun at 5 years or over—1, Jones and McKerrow on Mildred II of Les Godaines; 2 and 3, Kingston on Sonack of Hillstead and Violet of Tal Val. Cow having official record begun under age of 5 years—1, Reuping on Donnington Goldie 5th; 2, Mountain on Ingleside Pretoria Vrangue; 3, 4 and 5, Jones and McKerrow on Bordeaux of Courtil Bree, Kate of Aurelian Farms, and Governor's Ella of McKerrow Farm; 6, Sass on Pergue's Lady Crescent.

Get of sire—1, Marsh; 2, Tenney; 3, Mountain Bros.; 4, Woodbury; 5, Jones and McKerrow; 6, Kingston. Produce of cow—1, Marsh; 2, Woodbury; 3, Jones and McKerrow; 4, Mountain Bros.; 5, Kingston; 6, Sass. Exhibitor's herd—1, Jones and McKerrow; 2, Mountain Bros.; 3, Kingston; 4, Woodbury; 5, Ebels. Young herd—1, Marsh; 2, Woodbury; 3, Mountain Bros.; 4, Emmadine Farms. Calf herd—1, Marsh; 2, Jones and McKerrow; 3, Mountain Bros.; 4, Woodbury; 5, Kingston; 6, Emmadine. Dairy Herd—1, Jones and McKerrow; 2, Mountain; 3, Woodbury. State herd of ten animals entered by State Breeders' Association—1, Iowa; 2, Wisconsin; 3, Minnesota; 4, Illinois; 5, Ohio.

Senior and grand champion bull—Itchen May King. Junior champion bull—Golden Laddie of the Prairie.

Senior and grand champion cow—Mildred II of Les Godaines. Junior champion cow—Honey Bloom of the Prairie.

VOGEL'S COLLEGE BOY, SENIOR AND GRAND CHAMPION BROWN SWISS BULL AT THE NATIONAL DAIRY SHOW
OWNED BY HULL BROS., OHIO

Jerseys

This was not Jersey year at the National. The show at Shreveport drew a number of good herds which would ordinarily have been at Chicago. Also, the breed has not adapted the state herd idea which was so great a factor in the success of two other breeds. A dozen herds furnished one hundred fourteen animals but failed to equal the quality characteristic in previous years. Longview Farms of Missouri, heaviest winner at the Dairy Cattle Congress, met the winning herds from the Eastern States Exposition in many interesting competitions. The Missouri herd took fourteen of twenty firsts and five of the six championships. Belleview Farms, Connecticut, drew three blues and a junior purple; and M. E. and E. F. Pyle of Ohio, J. K. Dering, Illinois, and Inderkill Farms, New York, one blue ribbon each. H. G. Van Pelt of Iowa served as judge with John A. Lee of Kentucky his advisor.

The bull classes were weak; three aged sires starting the judging without a good one in the ring. Either the second or third would have been as popular in first place as the judge's choice, Sans Alois Meces King, a plain, straight bull from the Pyle herd. The three-year-old, Chief Raleigh, won his class for Longview over Gypsy's Gamboge Lad, a longer, smoother, better rumped bull owned by C. F. Sturhahn of Connecticut. The winner has the depth, openness of frame, and the clean dairy type to rate him over the $23,000 Eastern States Exposition champion. Fashionable Fern Lad, Longview's Dairy Cattle Congress champion, easily led his class. He later maintained his Waterloo record but had no clear title over the three-year-old which gave him close competition. For the first time in three shows Longview's yearling, Manora's Fairy Lad, was placed over W. A. Brewerton's Raleigh's King Thornbury, a stronger bull of better lines and more substance, heart, and promise. The ringside would have liked the winner better below second money than above. Longview's senior calf, Wolff's Chieftain 2d, junior champion at the Congress, again successfully claimed that honor.

HELEN GREENLEE OF OHIO
High contestant on Jerseys in boys' and girls' dairy cattle judging. She was high member of the Ohio team.

The real show began with the aged cows. Only seven came in, yet the absence of a large ring was unnoticed. Sly Puss P, Longview's recently imported twelve-year-old, defeated Majesty's Crocus, Belleview Farms' hope for the senior purple; the Eastern States winner, Bagot's Crocus, owned by Sturhahn; and Westfield Girl, A. M. MacClenahan's Colorado cow which won over Sly Puss at Waterloo. The four stood in the order of their mention. Sly Puss P is one of the best show cows seen in many seasons. At twelve years she is straight, strong, and her udder unfaulted. She calved a few hours after the class and even under that handicap was outstanding as champion of the show. The second cow was too low to the ground and too heavily fleshed to win. Her udder has less quality and balance than that of the winner. The third cow was very thin from heavy milking and lacked the rib and strength of the two above her. The Waterloo senior champion lacked the size, the depth, and openness, and the quality of udder to improve her rating. In the four-year-olds Raleigh's Star of Peace, Longview's Congress winner, placed over Belleview's blue ribbon winner at Springfield, Oxford Majesty's Gipsy 2d; in the three-year-olds Rochette's Noble Nina won for Longview; Belleview's two-year-old, Sybil's Gamboge Katherine, lead her class; Sociable Sybil, Inderkill Farms' only entry, was the best senior yearling; and Sybil's Oreolo, junior champion at Springfield for Belleview, took the same honor at Chicago. Longview's calves won the two groups.

The detailed winnings follow:

Bull 4 years or over—1, Pyle on San's Alois Meces King; 2, Belleview Farms on Majesty's Oxford Laddie; 3, Crystal Brook Stock Farm on Brampton Beauty Heir. Bull 3 years and under 4—1, Longview Farm on Chief Raleigh; 2, Sturhahn on Gypsy's Gamboge Lad.

Bull 2 years and under 3—1, Longview on Fashionable Fern Lad; 2, Ravine Farm on Thornbury Peter the Great; 3, Dering on Raleigh's Bright Prince; 4, Sturhahn on Sybil's Gipsy King; 5, MacClenahan on Maj. Feather Lad. Bull 18 mos., and under 2 years—1, Dering on Fairy's Duchess Chief; 2, Pyle on Financial Rose's Sans Aloi. Bull 1 year, under 18 mos.—1, Longview on Manora's Fairy Lad; 2, Brewerton on Raleigh's King Thornbury; 3, Pyle on Sans Aloi Greatness; 4, MacClenahan on Financial Dainty's Prince; 5, Dering on Raleigh's Oxford Chieftain. Bull calf 6 mos., under 12—1 and 2, Longview on Wolff's Chieftain 2d and Blue Feather's Raleigh; 3, Crystal Brook S. F. on Bright Radiator; 4, Sturhahn on Majesty's Broadland Pride; 5, Pyle. Bull calf under 6 mos.—1 and 4, Longview on Star's Fairy Lad and Buttercup's Butter Lad; 2 MacClenahan on Bosnians Raleigh Duke; 3, Dering; 5, Ravene Farm on Jolly Golden Jolly; 6, Pyle.

Cow 5 years or over—1, Longview on Sly Puss P; 2 and 5, Belleview Farms on Majesty's Crocus and Gambonia; Sturhahn on Bagot's Crocus; 4, MacClenahan on Westfield Girl; 6, Crystal Brook S. F. on May Beautiful Fern. Cow 4 years and under 5—1 and 3, Longview on Raleigh's Star of Peace and Fountain's Nema; 2, Belleview on Oxford Majesty's Gipsy 2d; 4, Sturhahn on Majesty's Gamboge Buttercup. Cow 3 years and under 4—1, Longview on Rochette's Noble Nina; 2 and 3, Belleview on Sybil's Oxford Dora and Green Farm Sybil; 4, Sturhahn on Zellina's Sybil; 5, Longview on Raleigh's White Lily; 6, MacClenahan on Western King Flora Dora. Heifer 2 years, under 3—1, Belleview on Sybil's Gamboge Katherine; 2, Sturhahn on Sybil's Finance; 3 and 6, Longview on Raleigh's Red Feather and Raleigh's Queen Manora; 4, MacClenahan on Jubilee Oxie; 5, Dering on Eulinda of Cedar Crest. Heifer 18 mos. and under 2 years—1, Inderkill Farms on Sociable Sybil; 2 and 4, Longview on Raleigh's Blue Feather and Raleigh's Queen of the Night; 3 and 6, Belleview on Green Farm's Sybil's Sister and Sybil's Gamboge Bounce; 5, Crystal Brook S. F. on Larkin Farm Primula. Heifer not in milk, one year and under 18 mos.—1, Belleview on Sybil's Orelo; 2 and 3, Longview on Raleigh's Royal Fairy and Raleigh's Golden Brightness; 4, MacClenahan on Princely's Sweet Rose; 5, Sturhahn on Bagot's Gamboge Sybil. Heifer calf 6 mos. and under 12—1 and 2, Longview on Raleigh's Miriam and Raleigh's Pretty Maiden; 3, MacClenahan on Majesty's Cowslip Feather; 4 and 5, Belleview on Royal Majesty's Blanchette on Sybil's Golden Ceyba; 6, Crystal Brook S. F. on Brampton Bright Beauty. Heifer calf under 6 mos.—1 and 2, Longview on Raleigh's Starling and Raleigh's Royal Maid; 3 and 5, MacClenahan on Majesty's Feather Lad Dora and Majesty's Feather Lad Pet; 4 and 6, Dering.

Get of sire—1 and 3, Longview; 2 and 4, Belleview; 5, Pyle; 6, MacClenahan. Produce of cow—1, Belleview; 2, 3, and 4, Longview; 5, Dering; 6, Pyle. Exhibitor's herd—1 and 2, Longview; 3, Belleview; 4, Sturhahn; 5, MacClenahan; 6, Crystal Brook S. F. Breeder's young herd—1 and 2, Longview; 3, MacClenahan. Breeders' calf herd—1, Longview; 2, MacClenahan; 3, Dering. Dairy herd—1, Longview; 2, Sturhahn.

Senior and grand champion bull—Fashionable Fern Lad. Junior champion bull—Wolff's Chieftain 2d.

Senior and grand champion cow—Sly Puss P. Junior champion cow—Sybil's Oreolo.

Holsteins

Greater uniformity was the outstanding characteristic of this year's showing. There were fewer ill conditioned, poor individuals—tail enders—than at any previous National, this in spite of the fact that there were 81 different exhibitors there,—49 of them with only one entry. This does not mean that winners of other years would have been outclassed had they been present; they would not. Minerva Beets in her prime would have beaten the best aged cow there, but she would have had to win over more topnotch cows than she ever met in a single ring.

MARYLAND DAIRY PRODUCTS JUDGING TEAM, SECOND IN THE CONTEST

Left to right: Clayton Reynolds, high man in cheese judging; J. T. Snyder, high man in judging butter; E. F. Holter (alternate); J. R. Graham; and J. F. Gamble, coach.

This improvement can be traced directly to the state herds and their encouragement of the small exhibitor, which in itself is reason enough for their continuance and increase. Although over 200 Holsteins from nine different states and Canada were shown, but five state herds were entered.

Among the nine aged bulls, the closest competition was between Cedar Lawn Canary Paul, Baird Bros.', Wisconsin, entry, Johanna Bonheur Champion 2d owned by the U. S. D. Barracks of Kansas, and Iowana Mercedes Homestead, the head of the Iowa State College herd. These three met two weeks before at Waterloo, placing in this order—Kansas. Iowa, Wisconsin. This time the order was somewhat reversed with the Wisconsin entry first, the Kansas bull second, and the one from Iowa third.

Baird Bros.' herd sire is very much of a dairy bull—one of the kind that you like better each time you see him. In spite of this scale, he has a world of quality and it was that quality together with his pronounced dairy type that brought him the blue in spite of one or two serious faults of conformation. The Kansas bull, touted by many as a winner, is an excellent individual, but he is too small and compact, nor did he possess quite the quality of number one. Iowa's entry, a splendid, upstanding type of bull, was sore behind and did not show to advantage.

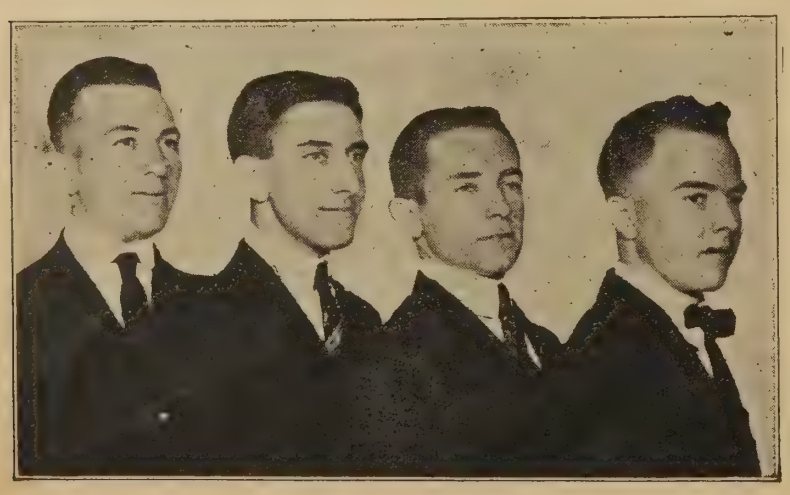
Wisconsin's bull was later senior and grand champion.

The closest competition for junior championship was between Matador Segis Walker Piebe, Carnation Stock Farms' junior yearling, and Sir Inka Superior Segis, the winning senior calf. Both are excellent youngsters, the former to be faulted just a little at the tail setting, the other at the shoulders, and either would have found favor as a junior champion with a part of the ring followers. The judge's decision favored the Minnesota Holstein Co.'s senior calf, largely because of his greater masculinity.

"What a ring!" was the almost universal comment when the judges started work on the aged cows. The 17 entries made what was, undoubtedly, the best Holstein aged cow class ever seen at a National Dairy Show. It was a showing that was a real credit to the breed.

Aitken Bros.' undefeated Doetje Nellie Concordia, and Irene Sarcastic De Kol, the Kansas entry that has shown so well all along the circuit, were both there and it was soon evident that they would be fighting for first place. The former is an extraordinarily good 12-year-old cow with plenty of stretch and real dairy type. Her udder showed a little meaty and heavy in one quarter and she does not have quite the finish of the other, but the judges were less pleased with the Kansas entry's udder, and they criticized her somewhat for a lack of openness of conformation. Princess Concordia Segis 2d, owned by M. Breen & Son of Iowa, that stood fourth in the final line-up, was one of the most striking looking cows of the class. She carried one of the very best shaped udders we have even seen on a Holstein cow anywhere, but Judge Moscrip was not entirely satisfied with its attachment and the cow, within two or three hours of parturition, did not show in form that warranted her going higher.

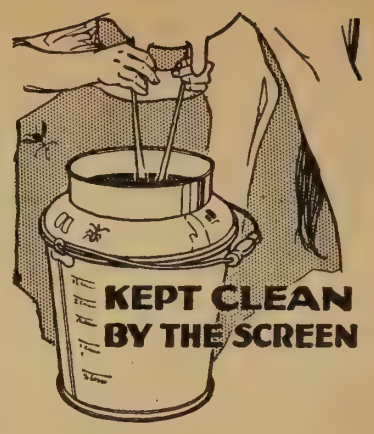
Doetje Nellie Concordia was afterward grand champion female with Josephine Johanna Oak De Kol, the winning two-year-old owned by J. P. Phillips of California, her strongest competitor. Had the two-year-old been just a little more rugged in conformation and not shown quite so quartered an udder she would have defeated the aged winner. The old cow was later grand champion.



Baird Bros.', Wisconsin, winning senior calf, Nockdair Canary Parthenia, was junior champion with Far Oaks Inka Homestead, the Minnesota Holstein Co.'s senior yearling, a close second.

Five state herds lined up for the last class of the black and white show, Wisconsin, Minnesota, Kansas, Illinois, and Indiana. They were placed in the order mentioned with Minnesota a very good second.

W. S. Moscrip did the judging with Peter Small of Ohio advisory judge.



Following is a complete list of awards:

Bull 4 years or over—1, Baird Bros. on Cedar Lawn Canary Paul; 2, U. S. D. Barracks on Johanna Bonheur Champion; 3, Iowa State College on Iowana Mercedes Homestead; 4, Cass Farm Co. on King Aaggie Hengerveld; 5, Bell on Colony Posch Newman; 6, Haley & Lee on Count Plus Inka Sylvia. Bull 3 years, under 4—1, Mayowood Farms on Johanna Glenda Lad; 2, Morgan Bros. on King Korndyke Isabelle Veeman; 3, Wapsimoor Farm on Sir Wapsie Flossmor; 4, Hetts on King Fan Segis. Bull 2 years, under 3—1, Clarinda State Hospital on King Pietertje Fayne Ormsby; 2, Schroeder on Sir Hengerveld Pietertje Ormsby; 3, Mayowood Farms on Ondine Homestead Posie; 4, Hetts on Juliana De Kol Lyons; 5, Lashbrook on Sir Walker Segis Homestead; 6, Stubbs on King Forbes Genista Homestead. Bull 18 mos., under 2 years—1, Loeb Farms on Charlevoix Marbury; 2, O'Leary on East Troy Sir Ollie; 3, McCoy

OHIO DAIRY PRODUCTS JUDGING TEAM—WINNERS OF FIVE OF THE SEVEN AWARDS MADE

Left to right: A. H. Neu, high contestant; H. J. Kline; R. C. Regelsberger (alternate); and T. V. Armstrong, third high man of the contest.

No Dirt or Impurities can drop into the milk when a Non-Spill Sanitary Dairy Pail is used. A closely woven brass sieve with a non-splash rim protects the milk from contamination. The switching of the cow's tail cannot throw dirt into the pail. Flies or germ-laden insects cannot fall or crawl into the milk.

This New Pail is Spill-Tight. If it is kicked over a valve automatically closes the outlet. No milk can be spilled. This non-spill feature alone will pay for the pail several times over in one summer season by saving the milk when the cow kicks.

It Is Strong, Durable and Will Last many seasons. It is made of heavy charcoal tin plate, and holds 3 gallons. It is absolutely sanitary. Every part can be taken out and washed *clean.* Nothing is hidden or unreachable.

Your local dealer has it or will get it for you. It's a Schlueter metal product.

Dealers: Write for our special proposition. Your customers will want Non-Spill Sanitary Dairy Pails.

Non-Spill Sanitary Dairy Pail Co.
4636 N. Broadway : St. Louis

FOREMOST AMONG BETTER GRINDERS
Crush and grind all the grains that grow; fine for hogs or coarser for cattle feeding. Corn in husk, Head Kafirs, and all small grains.
Strength, Durability and Service radiate from every line of these Masterful Grinders. Simple but effective in adjustment.
LIGHT RUNNING—LONG LIFE—EXTRA CAPACITY CONE-SHAPED BURRS
10 sizes—2 to 25 H. P. or more. Also Sweep Mills. It pays well to investigate. Catalog FREE.
The N.P.D. Bowsher Co., South Bend, Ind.

The Pioneer Gambrel Roof
Attractive Design. Strongly Built. Adjustable Top for filling. Easy to put on. Sizes to fit any Silo. Price will Surprise you. Can fill orders promptly. We also manufacture Silo Chute. Very strong. Easy to put on.
PIONEER MFG. CO. MIDDLEBURY, IND.

Heifer 2 years, under 3—1, Phillips on Josephine Johanna Oak De Kol; 2 and 4, Miller on Zella Rose Ormsby and Miss Canary Lunde Korndyke; 3, Bloomingdale Farms on Jennie Jewel Model; 5, Minnesota Holstein Co. on Far Oaks Miss Homestead Rue; 6, Cass Farms Co. on Aaggie Hengerveld Daisy Homestead. Heifer 18 mos., under 2 years—1 and 3, Minnesota Holstein Co. on Far Oaks Inka Homestead and Far Oaks Fannie Homestead; 2, Bridgeport Holstein Co. on Miss Konigan Pontiac Prilly; 4, U. S. D. Barracks on Johanna Bonheur Segis De Kol; 5, Haley and Lee on Aggie De Kol Sylvia; 6, Trieloff Bros. on Belle Gem Longfield 2d. Heifer not in milk, 1 year and under 18 mos.—1, Grahamholm Farm on Grahomholm Colantha Segis Kaan; 2, Kansas State Agricultural College on Canary Paul Inka; 3 and 5, Jefferson Co. Farm on Inka Coloma Beauty and Princess Beauty Coloma; 4, Minnesota Holstein Co. on Star Segis Pontiac Superior. Heifer calf 6 mos., under 12—1, Baird Bros. on Nockdair Canary Parthenia; 2, Minnesota Holstein Co. on Miss Inka Homestead; 3, Halbach and Sons on Alice Hengerveld Bess Ormsby; 4, Williams Bros. on Bonair Princess Ormsby; 5 and 6, Cass Farms Co. on Fayne Gletka De Kol and Bessie Alcartra Pink. Heifer calf under 6 mos.—1 and 4, Haley and Lee on Mary Ann Sylvia and Sarah Anna Sylvia; 2, Grahamholm Farm on Grahamholm Winana Beets; 3, Halbach and Sons on Esther Bess Pietertje Ormsby; 5, Minnesota Holstein Co. on Miss Ideal Homestead; 6, Spaulding on Queen Segis Piebe Mercedes; 7, Cass Farms Co. on Mirand Grace De Kol. Cow having official yearly record begun at 5 years or over—1, Minnesota Holstein Co. on South Side Inka De Kol; 2, Morgan Bros. on Pietertje Aaggie Grace Beets; 3, Galt and Spencer on Johanna De Kol Fairmont Maid; 4, Bell on Schilling Colantha Langtry; 5, Aitken Bros. on Jenny Wren Pietertje. Cow having official yearly record begun under the age of 5 years—1, Cass Farm Co. on Lulu Baby Girl; 2, Rock River Farms on Pabst Pontiac Madrigal; 3 and 4, Haley and Lee on Ourville Rhetta Colantha and Calamity Snow Mechthilde 2d; 5, Randolph on Whitehurst Colantha Homestead; 6, Aitken Bros. on Johanna Ferncliff McKinley. Advanced Registry cow with two of her progeny—1, Minnesota Holstein Co. on South Side Inka De Kol.

Get of one sire—1, Aitken Bros. on Get of Terracelawn Hengerveld Segis; 2, Haley and Lee on Get of May Silvia Pontiac Cornucopia; 3, Minnesota Holstein Co. on Get of Piebe Laura Ollie Homestead King; 4, Hargrove and Arnold on Get of King Pietertje Ormsby Piebe; 5, Cass Farms Co. on Get of Fayne Bessie Homestead; 6, Bridgeford Holstein Co. on Get of King Segis Alcartra Prilly. Produce of one cow—1, Cass Farm Co. on Produce of Clothilde Hountge Boone; 2, Minnesota Holstein Co. on Produce of South Side Inka De Kol; 3, Aitken Bros. on Produce of Doetje Nellie Concordia; 4, Haley and Lee on Produce of Nettie Abbekerk; 5, Haley and Lee and Miller on Canary Colantha Walker; 6, U. S. D. Barracks on Produce of Buffalo Ella.

Breeders' calf herd—1, Minnesota Holstein Co.; 2, Haley and Lee; 3, Cass Farms Co.; 4, Hargrove and Arnold. Exhibitors' herd—1, Cass Farms Co.; 2, U. S. D. Barracks; 3, Haley and Lee. Young herd—1, Minnesota Holstein Co.; 2, Cass Farms Co.; 3, Haley and Lee; 4, Bridgeford Holstein Co. Dairy herd—1, Aitken Bros.; 2, Haley and Lee. State herd—1, Wisconsin; 2, Minnesota; 3, Kansas; 4, Illinois; 5, Indiana.

Senior and grand champion bull—Cedar Lawn Canary Paul. Junior champion bull—Sir Inka Superior Segis.

Senior and grand champion cow—Doetje Nellie Concordia. Junior champion cow—Nockdair Canary Parthenia.

Brown Swiss

J. P. Allyn of Wisconsin, whose Brown Swiss herd was formerly a consistent ribbon winner, was back in the ring this year, serving as a judge with G. C. Humphrey of the same state. Seventy-seven head from seven herds made up many good classes. Hull Bros. of Ohio took a dozen blues and the bull championships; W. O. Bohart of Montana won two firsts; and five class winnings and the female championships went to E. A. Bower of Ohio. Other exhibitors were M. T. Cottrell and Riley Riedy of Illinois and Frank Stefl and Arthur Haese of Wisconsin. The latter, a member of the boys' and girls' calf club of Winnebago County, entered his junior calf and was awarded second place.

Vogel's College Boy added another grand championship ribbon to the list he has won for Hull Bros. The two-year-old, Ethel B's Miliator, and the junior champion yearling, Prince of Lake View, both from the same herd, made good competition. Bohart won the two calf classes.

Swiss Valley Girl 9th, in a class of nine aged cows, led her sister as she did at Syracuse and Waterloo. Riley Riedy's Fairview Laura 2d was in third money with the two Hull cows easy leaders. Betty of Lake View, Bower's 1919 grand champion, shown as a four-year-old, repeated her last year's winning. She is a bit deeper, better sprung, and is superior to either of the two top aged cows in udder. She was dry. The junior champion was the yearling from Bower's herd, Lou Anna of Lake View. The breed's best showing came in the groups which were large and sufficiently close to give many difficult placings.

The awards by classes were:

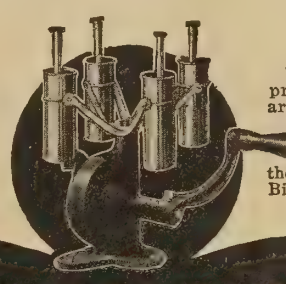
Bull 3 years or over—1, Hull Bros. on Vogel's College Boy; 2, Bower on Nick's Prize Master; 3, Bohart on Sunny Hill Bob; 4, Cottrell on Nick's Swiss; 5, Stefl on Flora Dinvire's Gr. Son. Bull 2 years and under 3—1, Hull on Ethel B.'s Miliator; 2 and 3, Bohart on Beauty C.'s N. M. and Zella A. W. Bull 1 year and under 2—1 and 3, Hull on Prince of Lake View and Sarnen; 2, Bohart on Tassa's M.'s Nick; 4, Stefl on Tilleda Boy. Bull calf 6 mos. and under 12—1 and 3, Bohart on D.'s Dick and Beauty 2d's Dick; 2, Bower on General of Sedgeley; 4, Hull on Jerry of Lake View. Bull calf under 6 mos.—1 and 4, Bohart on Master A's Bob and Bozeman Boy; 2, Hull on Gold King; 3, Bower on Dutch Boy; 5, Stefl.

Cow 5 years or over—1 and 2, Hull on Swiss Valley Girl 9th and Swiss Valley Girl 7th; 3, Riedy on Fairview Laura 2d; 4, Stefl on Agnes S.; 5, Bohart on Master's Beauty C. Cow 3 years and under 5—1, 3, 4, 5, Bower on Bettie of Lake View, Fairview Maxine, Elsie of Lake View 3rd, and Ethel of Lake View; 2, Bohart on Master's Bernice. Heifer 2 years and under 3—1, Hull on Forest Girl 7th; 2, Bower on Silver Girl; 3 and 4, Stefl on Snow Bell and April Sunshine. Heifer 18 mos. and under 2 years—1 and 2, Hull on Nettie of Lake View and Sophia of Lake View; 3 and 4, Bohart on Katherine's Heifer and Bob's Mascot. Heifer not in milk, 1 year and under 18 mos.—1, 5, 6, Bower on Lou Anna of Lake View, Magnolia B. 2d, and LaMark; 2, Bohart on Nick's Alice C.; 3 and 4, Hull on Lucile of Lake View and Loretta of Lake View. Heifer calf 6 mos. and under 12—1, 3, and 4, Hull on Dottie of Lake View, Merney of Lake View, and Vogel's Valley Girl 6th; 2, Bohart on Dick's Charm; 5, Stefl on Tracy. Heifer calf under 6 mos.—1 and 4, Bower on Kate of Bower Farm and Kathryn of Bower Farm; 2, Haese on Edelweis Girl; 3 and 5, Hull on Miliator Nan of Lake View and Lottie H. of Lake View; 6, Bohart on Dick's Nellie B. Cow having official yearly record begun at 5 years or over—1 and 2, Hull on Swiss Valley Girl 7th and Nan of Lake View; 3, Riedy on Magnolia D. Cow having official yearly record begun at 2 years and under 5—1 and 4, Bower on Bettie of Lake View and Elsie of Lake View; 2, Hull on Swiss Valley Girl 9th; 3, Bohart on Master's Bernice.

Get of sire—1, Bower; 2, Hull; 3 and 4, Bohart. Produce of cow—1 and 2, Hull; 3, Bower; 4, Bohart. Exhibitor's herd—1, Hull; 2, Bower; 3 and 5, Bohart; 4, Stefl. Young herd—1 and 3, Hull; 2, Bohart; 4, Stefl. Breeder's calf herd—1, Hull; 2, Bohart; 3, Stefl.

Senior and grand champion bull—Vogel's College Boy. Junior champion bull—Prince of Lake View.

Senior and grand champion cow—Bettie of Lake View. Junior champion cow—Lou Anna of Lake View.



$6.95 BUYS A CREPACO Babcock MILK TESTER

Don't Keep Boarder Cows!

Appearances are deceiving. The cow you think is best may be unprofitable. The man who **knows** is the man who succeeds. The Crepaco Babcock Tester shown below will point out the unprofitable cow. It will enable you to buy cows with open eyes. It will enable you to secure adequate remuneration for your milk and cream.

Free Glassware, Etc.

For $6.95 we furnish a high grade, accurate, 4-bottle testing machine, one acid measure, pipette, two brushes, one bottle acid, and instruction sheet. Everything complete for testing.

Free Instructions Furnished

With each machine printed instructions are furnished which are plain and simple. A child can make the tests. Write for Big Dairy Catalogue.

THE CREAMERY PACKAGE MFG. COMPANY.
68 W. KINZIE ST. CHICAGO.

"Dandelion Butter Color" Is Big Prize Winner

Be sure and use Dandelion Brand Butter Color and give your butter that June golden shade which brings top prices—pleasing the eye and tempting the palate.

The High Scores of 1920

In many of the State Buttermakers' Shows, first awards were won by users of old reliable "Dandelion Brand." You can't miss by giving a trial to the butter color which helps 90% of the successful buttermakers of America.

Never gets rancid. **Doesn't affect flavor.**
Doesn't color the buttermilk. **Leaves no sediment.**
Colors more butter to the gallon.

Dandelion Brand Butter Color is purely vegetable and fully meets requirements of all Food laws—State and National. Ask your jobber for prices.

WELLS & RICHARDSON CO., Inc. BURLINGTON, VERMONT

EDITORIAL COMMENT

THE Illinois Agricultural Association cites in one of its weekly news letters an experience which shows distributors and consumers the necessity of laying plans for stabilizing and for better marketing of farm products. The Illinois Agricultural Association states: "On Monday, September 13, producers received an average of 16 cents a dozen for sweet corn; on Wednesday 8 cents, and on Friday 9½ cents. The same three days the average retail price at 25 stores in the Loop and suburbs was 50 cents on Monday and 45 cents on Wednesday and Friday."

It should be borne in mind that there is a wider variation on vegetables than on other farm products but this experience does point out the opportunity of marketing farm products more efficiently.

GOOD FEEDING PAYS

As a general practice, no matter how high the prices of feedstuffs or how low the price of milk, it pays to supply the dairy cow with an adequate quantity of feed. If we survey the dairy field, we find that the farmer who feeds his cows well is the one who has made the most money.

Now and then we hear men brag that their cows require comparatively little feed and that it does not pay to purchase any mill feeds for balancing the roughages of the farm. This may be true when there is an adequate supply of good clover and alfalfa hay and corn silage and the prices of mill feed high and milk cheap, but taking it by and large it is a mistaken idea that using mill feeds for supplementing home grown roughages is unprofitable.

We appreciate that the prices of feed and milk may be out of proportion. They have been in the past and they are today, but the best way for the dairy farmer to meet this situation is not by scanty feeding. It is better to sell some of the cows, especially the poor ones, and feed the remaining ones so that they will produce profitable flows of milk.

We have never observed the time, not even during the war, when a dairy farmer was justified in keeping poor cows. Some people held that it was patriotic to keep cows that would not return the cost of the feed. We considered it unpatriotic because these poor cows were consuming good feed and yielding low returns.

The supply of milk in this country can be increased or decreased at least 25% simply by the kind of feeding and care given the cows. If this be true, then why not dispose of the poor cows, and they are estimated to be one-third of our total number, and feed the other two-thirds better rations. To do so would be to practice good business methods; to feed all the herd scrimpingly is poor business.

'MPLAINT OR ACTION, WHICH?

Why is it so many dairy farmers appear indifferent toward their own in· stry? Hundreds of persons at the pres··t time are e··rnestly endeavoring to organize and keep in operation milk producers' associations and co-operative marketing companies. All these people so engaged find indifference and, in some cases, opposition to such undertakings among the dairy farmers. If the evil practices of marketing farm produce are to be minimized or eliminated and better ones established, the producers must be willing to unite for the purpose of directing or controlling the marketing of their products.

For the past few years the Milwaukee Milk Producers' Association has been taking care of the so-called surplus milk by manufacturing it into cheese and of late it has been manufacturing the skimmilk into powdered milk. Considerable capital has been required to establish an institution of this character and to place the milk producers in position to get the full market price for their products.

We are informed by Mr. G. R. Rice, secretary of this association, that there are 3,000 shippers and of that number only 612 have purchased stock. On the average, 6,000 cans of milk are shipped to Milwaukee daily, and it has been shown that since the organization of the Milwaukee Milk Producers' Association, the average price for milk has been 10c more per can. This is an income of $600 a day. In the manufacture of the so-called surplus milk, there has been an average daily loss of $54. Many of the shippers see the loss of $54 but can not see the gain of $600 a day and hesitate to take stock because there has been a loss. In other words, these men are not willing to lose $54 a day in order to gain $600 a day. This is indeed difficult to understand.

We dare say that the men who are unwilling to purchase stock are the very ones to complain the most regarding the ill treatment of the farmers. These men have no right to complain about unfair treatment when they are not willing to work with their fellowmen for improving marketing conditions.

When will all the dairy farmers see that if they are to direct their own enterprises it will be necessary for them to put something into their business besides talk and complaint?

RETURNING TO THE FARM

The past year our attention has been called to a number of men engaged in agricultural college and experiment station work who have returned to the farm. These men received what farmers would call an excellent salary. We might say the average salary would probably be in the neighborhood of $3,000 per year. It undoubtedly seems strange to the man who works on a farm and feels that he has about the poorest paying position on earth, and the hardest, why any person receiving a compensation of $3,000 per year would return to the farm because he thought there were better opportunities there for making money.

This, however, is the case. The advance in the cost of living, including rent, food, clothing, and everything the consumer must buy, has made a salary of $3,000 a year look small, and these men see no opportunity of laying aside a portion of it to provide for old age.

In conversation just recently with a person who receives $4,500 a year and lives in Washington, he advises that he just meets his expenses.

We present these facts to our readers so they will see that the farmer is not the only one who is feeling the pinch of high prices, and while positions seem easy and provide attractive salaries in the city, there is another side which the farmer fails to consider. It is human nature for an individual to feel his position or occupation is the least remunerative, the most irritating, and the hardest.

Many of the men who have returned to the farm the past year or two have undoubtedly done so for two reasons. Some prefer farming to educational or investigational work, but the most of them have returned to the farm because they believe it offers better opportunities for making and saving money.

COLLECTIVE BARGAINING

Representatives of co-operative milk producers' associations who have met and fixed prices of milk have been hauled into court under the Sherman Anti-Trust Act. In every instance they have been found not guilty because it was not proven that any of the representatives of these associations violated the Sherman Anti-Trust Law; and further, it is recognized by the best informed men that farmers have a right to sell their products collectively, provided they do not attempt to form a trust for arbitrarily controlling prices. Corporations that manufacture wares set prices. The farmers have the same privilege, but it is not recognized by all classes of citizens.

The raisin growers of California have had a rather interesting experience in marketing their product. The men who purchased their raisin crop until the co-operative organization was formed in 1912 attacked the growers upon four points: first, on the percentage of crop controlled; second, on refusal to sell to raisin packers and speculators; third, on guaranteeing to the grocery trade a stable price to prevail throughout the year; fourth, on fixing prices on raisins through the plan of a "firm-at-offering" price. The raisin growers were sustained on the right to control ninety per cent of the acreage and on the right to refuse to sell to packers or speculators. They lost on the claim to establish a guaranteed price to wholesalers to be effective throughout the year and lost on the "firm-at-opening" price. The Co-operative Raisin Growers' Association is not particularly injured in being unable to guarantee a price to the wholesalers or by abandoning the "firm-at-opening" price plan. The Department of Justice now brings action against the raisin growers for violating the Anti-Trust Law. The whole trouble could have been avoided had the Raisin Growers' Co-operative Marketing Association organized on the non-profit sharing co-operative plan.

In order to put an end to this contention and to permit representatives of dairy organizations from being drawn into court, farmers should urge their congressmen and senators to vote for the Volstead Bill which will be brought before Congress when it convenes. This Bill will make it lawful to practice collective bargaining so long as it does not violate the Sherman Anti-Trust Law. This Bill provides penalties if trust methods are used in fixing prices or attempt is made to corner the market on a particular farm product. It will permit the representatives of co-operative organizations to sell the products of their members collectively and to arrive at a fair market price for them. The Volstead Bill should be enacted into a law, for collective bargaining is essential to successful co-operation.

SWISS CHEESE

Market prices of Swiss cheese vary more than for any other dairy product. This is due to a large extent to the wide variation in the quality of Swiss cheeses. According to the New York Produce Review and the American Creamery, fancy imported drum Swiss cheese recently sold at 75c per pound. An eastern manufacturer of Swiss cheese who is able to produce a quality nearly equal to imported cheese is receiving 65c per pound. The cheese manufacturers of the Middle West are receiving from 50c to 55c for fancy to extra fancy. No. 1 Swiss cheese is selling for 40c to 45c and No. 2 Swiss cheese for 23c or less per pound.

There is a large opportunity for improving the present practices of manufacturing Swiss cheese. It has been and is now a process which is an art more than it is a science. For more than ten years the Dairy Division of the U. S. Department of Agriculture has carried on experimental work with Swiss cheese attempting to perfect the process of its manufacture and it has been successful. The Dairy Division has made the process of Swiss cheese making a science and less of an art.

Those engaged in the manufacture of Swiss cheese and patrons delivering their milk to Swiss cheese factories should interest themselves in the process of manufacturing cheese as is now advocated by the Dairy Division. We are sure they would produce more uniform quality of cheese and that it will place this phase of our dairy industry upon a much more secure basis. This is highly desirable when we consider the wide variety in the present quality of Swiss cheese produced in this country and that prices vary from 23c or less per pound to 75c per pound.

Milk Cooling Station for Alabama

Is it practicable down here to establish a cooling station to cool milk so it could be shipped 200 to 300 miles and then bottled and retailed? Can you supply me with specifications for plant sufficient to handle 1,500 gallons milk daily?

Gallion, Ala. W. C. H.

This inquiry was referred to R. S. Smith of the U. S. Dairy Division, who replies as follows:

"We are taking the liberty of answering inquiry in two ways even though you may desire only the answer pertaining to the shipping, bottling, and retailing of raw milk.

"This office is at present conducting studies on the shipment of milk in the South, and, from the data already secured, we would advise against the shipping of raw milk from 200 to 300 miles, and then bottling it for retail delivery, for the following reasons:

"1. Milk received at the country cooling station would vary in age and condition according to the distance the producers are away and whether deliveries are limited to once a day, thereby necessitating the storing of milk over night on the farm.

"2. Milk held overnight on farms in that climate, unless properly iced, would hardly be in a salable condition after a 200-mile shipment, even though it might be cooled properly at the cooling station before shipping.

"3. The present method of shipping properly pre-cooled milk in baggage or express cars in jacketed or special insulated cans, is not practicable for distances of 200 to 300 miles, because of the rise in temperature and spoilage that might occur especially in hot weather.

"While the preceding reasons have been given as causes for our belief that the shipment and bottling of raw milk is impractical for such a distance we are of the opinion that under changed conditions of shipment and with the pasteurization of the milk as an added safeguard, before or after it is bottled, the establishing of a cooling station would be practicable.

"In order to make such a system practical the following points are suggested:

"1. That the farms producing milk be located within an area that would allow the milk to be collected at the farm or delivered to the cooling station twice a day. This would eliminate improper cooling and storage of milk on the farm, which is a problem that faces so many southern milk producers.

"2. That the cooling station be equipped with facilities for sterilizing the milk cans before they are returned to the producer and that all such cans be thoroughly washed and sterilized after each use.

"3. That the cooling station be equipped with proper milk cooling and storage facilities and that sufficient ice is available at all times for the producers and for use in the cars during shipment.

"4. That some type of insulated refrigerator cars be used for the shipment and that ice be placed in abundance on the cans of milk and in the bunkers. Such refrigerator cars should be properly pre-cooled and then used in rotation when possible, to avoid the expense of totally pre-cooling.

"5. Upon arrival at the city milk plant, the milk should be immediately pasteurized by the holding, or "in the bottle" method, (145° F. for 30 minutes) and immediately thereafter cooled to below 50° F. After the milk is bottled and ready for delivery it should be kept cold by keeping an abundance of cracked ice over the bottles.

"By following out this general outline, we believe that the cooling of milk at a country station and shipping it to a pasteurizing plant 200 to 300 miles away where the milk will be properly pasteurized and subsequently properly handled, that the business will be practicable.

"Another solution might be suggested if it were decided to pasteurize the milk at the country station before shipping. This would necessitate the return shipment of empty bottles and washing them prior to their return as well as sterilizing them prior to filling. Milk could be delivered in the city at wholesale in cans sealed after being filled at the country station and immediate delivery of the bottled milk could be made upon the arrival of the train, thus eliminating the handling at the city plant prior to delivery. The conditions of shipment would, of course, be the same as for the raw milk shipment as previously stated. It would necessitate the delivery of the pasteurized milk in the city within 24 hours after the pasteurizing process, in order to conform with some health department regulations and to insure satisfaction. This would be possible if the pasteurization process at the country station could be so arranged that the shipment would arrive in the city and the delivery be completed, all within the specified time."

Calves on Whole Milk—Bringing Cows to Milk

What is the best system of feeding pure-bred Holstein calves from time of birth until one year old? We can get all kinds of grain but have no skimmilk so will feed whole milk. We have good corn silage and legume hay available.

I would also like to know how you care for and feed heavy milking Holsteins the first three weeks after calving to bring them to a maximum milk flow.

Crompton, R. I. H. Bros.

Even though whole milk makes a very expensive feed for calves, we are sure that, particularly with pure-breds, it pays to be rather liberal with it for the first ten or twelve weeks. It is not necessary to feed heavily of whole milk for this entire period, but it is so difficult to give calves a good start without milk that it is profitable to feed some quantity of it. The feeder can begin to decrease the amount of milk by the time the calves are four to five weeks old, when they should begin to consume hay and a grain mixture.

Give as much hay as the calves will pick over and supply a grain mixture of ground corn and oats with oil meal. Let the calves eat as much of this as they will consume. Gradually decrease the amount of milk until the calves are on the hay and grain alone. There will be some differences among the calves and it will be necessary to continue some of them on milk longer than others. Silage should not be fed to calves until they are six months old or more.

It is a mistake to crowd a cow into full milking in too short a time. When Holsteins freshen in good condition, it is wise to take at least three weeks in getting them onto full feed. At first give them only hay, a little succulent feed, and a limited supply of a light grain mixture such as 200 pounds of ground oats, 200 pounds of bran, and 100 pounds of oil meal. After a few days, some heavier feeds may be included and the amount of feed gradually increased. So long as the cow increases in milk flow, the feeder can add to the amount of grain fed. He should watch this carefully and, as soon as the cow fails to respond to even slight additions to the grain mixture, cut down the grain supply slightly.

The feeder should not be over anxious to get the last pound from his cows. Rather, he should keep them at a safe maximum and depend upon a liberal milk flow throughout the year rather than an extra heavy production during the first few weeks.

Some idea of what may be considered a full feed for heavy milking cows may be gained from the fact that commonly a cow receives as much of a legume hay as she will consume and silage at the rate of 35 or 40 pounds per day. In addition she receives a grain mixture at the rate of about one pound for each three or three and one-half pounds of milk produced.

Cause of Tuberculosis—Drying Up Cow

If it is not too much trouble would like to ask you how tuberculosis originates in dairy cattle. I read that it is caused a great deal by poor ventilation in the barns in winter time, but here in California they are outside all the year around and I hear there is a great deal of it here. Some say it is caused by the cows lying out in wet corrals on the cold winter nights, while others say it is caused by eating dry, dusty hay the year round. Have they found any cure for it? Are there any figures as to what state has the most tuberculosis in its cattle?

In a string of 30 cows, how often does there need to be a fresh cow come in to keep up the regular quantity? A great many dairymen blame the milker when the quantity shrinks.

Venice, Calif. T. H. C.

Tuberculosis is caused by a germ and is not directly due to poor ventilation or the condition under which cows are kept. However, a poorly ventilated barn will put the cows under such a strain that they are less able to resist the disease, while a poorly lighted barn does not permit the sunlight to kill the tubercular germs which may be in the barn. While we recognize tuberculosis as a germ disease, yet we do insist, as a prevention against tuberculosis and other animal diseases, that the barn should be well ventilated, the stable kept clean, and that it has a sufficient number of windows to permit the disinfecting properties of sunlight to enter and to render the barn sanitary and neat appearing. Tuberculosis is not caused by cows lying out in wet corrals on cold, wet nights, or by the feeding of dusty hay. All these things are undesirable, however, and may render less effective the cow's resistance to the infection.

There are no figures available as to what state may have the most tuberculosis. There are certain states in which more testing has been done than in others and sometimes the assumption is made that these states may have the greater amount of tuberculosis. Where the tuberculin test is not used there may be as many, if not more, tubercular cattle than in those regions where it is in general use. There has been no survey made of states to indicate the actual amount of tuberculosis that may be in all the herds. The only data we have is on those herds where the owners have voluntarily applied the tuberculin test.

In a string of 30 cows, assuming that all are of approximately the same production, it will be necessary to have from two to three cows freshen each month. This is not always practical and, indeed, there are seasons of the year when all cows will go down somewhat in production. In our Midwest country, this will occur during the hot months of July and August and possibly extending into September. Ordinarily our cows go to pasture in May and during the latter part of that month and during June they receive excellent pasture which induces a large flow of milk. Indeed, there are so many factors involved, such as the natural productivity of the cow, the weather, feed available, etc., that it is very difficult to more than attempt to approximate an equal production of milk from month to month. Even with the best laid plans, there is quite liable to be a considerable variation from month to month in the expected production.

It is unquestionably true that the milker may dry off a cow faster than she should dry off. This may be due to the fact that he is not naturally good at milking, or it is possible that he may neglect the work, do it inefficiently, and possibly fail to milk out his cows completely at each milking. We are inclined to believe, however, that where the milker is reasonably efficient and reliable that the greatest occasion for failure of milk flow is lack of proper feed and care, combined with the natural and inherent characteristics of the cow herself. There are certain cows that seem to have a short milking period. This is sometimes due to their inheritance and, in other cases, may be due to the fact that they have become accustomed to this through the kind of handling and milking they have had in the past.

The large producing cow is ordinarily a persistent milker and we sometimes fail to recognize her because she may not give a large quantity at first but she will maintain the pace for a full ten to eleven months. Another cow may give a large quantity for a month or two and then drop off rapidly in production.

Disk Tractor Plows

Have you ever had any experience with disc tractor plows? Part of my land has quite a number of solid rocks a few inches below surface and we are having considerable trouble losing plows with tractor plowing. With the type of tractor I have it is almost impossible to put on a clutch release. My tractor is an old style I. H. C. 8-16 with rigid plows and wood break pins.

Lake Mills, Wis. W. P. W.

I did extension work in Alabama from 1915 to 1917, during which time I had considerable experience in fall plowing of the stiff limestone and clay soils of that state. During dry periods after harvest it is almost impossible to use a mold board plow in these soils. However, by the use of the disc plow, we were able to do excellent work. I do not see any reason why the disc plow could not be used with the I. H. C. 8-16 tractor. In fact, I have asked the disc plow manufacturers to all of our tractor demonstrations here in Pennsylvania and they have demonstrated their plows with very excellent results and farmers are beginning to employ these plows.

We have somewhat the same difficulty of encountering solid rock here on the College Farm at Pennsylvania State College and I have recommended the use of disc plows to the farm superintendent. While he has not yet employed these plows, I believe that he will try a couple out next season. R. U. Blasingame.

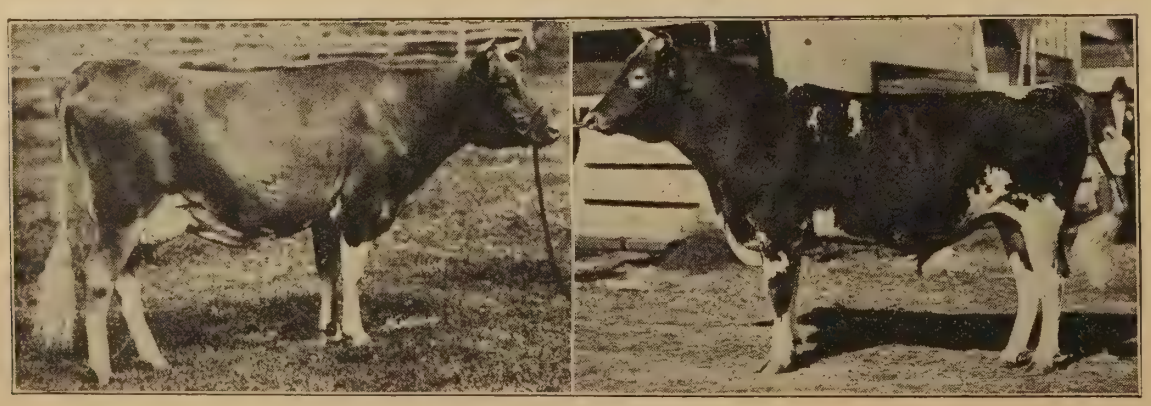
Pennsylvania College of Agriculture.

PLAY THE GAME

HELEN S. K. WILLCOX, NEW YORK

NEW YORK STATE and neighboring dairymen found themselves facing one more crisis in their eventful history when, on the first of October, manufacturers of their raw product declined to accept further amounts at any price. In other words, the manufacturers, for the steenth time, sought to create an impasse in the dairy world and to break the Dairymen's League once and for all by attending strictly to their own important profits while utterly disregarding the producer's very existence, where that existence depended, as it does in many thousand cases, on the monthly dividends from the herd. The manufacturers proceeded to weep crocodile tears by the billion over the sad situation in which they were obliged to place their dear patrons. They assured us, the tender-hearted Bordens and the so nice and non-native Nestles', that it really hurt them far worse to administer our annual punishment and third degree than it hurt us to receive same—the idea delicately conveyed being that the martyr manufacturers hate like sixty to keep on treating us rough. But under the circumstances, inasmuch as 85,000 of us, rather an awe-inspiring number of brain and brawn as it were, are getting too independent and heady, therefore when half an excuse offers, as in the present instance of too much made-up milk well, all together now! Kill the League!

And the hard part of it is that almost half of our great dairy membership so far has fallen for the adverse propaganda of our long-feared and masterful milk buyers, and at this writing is still holding up the work of the proposed pool, which pool requires 50,000 signatures or contracts out of the 85,000 to make it a fair go.



The members of the League who refuse to enter into the agreement give many reasons for their stand, any of them perhaps possible of occuring, but none of them probable. They fear that the handling of so much money will turn the heads of our hired officers in touch with it and there may be an absconding therefore of wealth untold—to come out of the poor dairymen. Then these pessimistic ones argue that pooling will level each man to his neighbor's standards, or lack of them, with a resulting lowering of the quality and eventful price paid for the product. Of course it is true that John Doe over in Delaware County or down in New Jersey or Pennsylvania will get the same amount per hundred pounds for his milk as I will in Chenango County, whereas John perhaps was receiving a bit more at his creamery than I at my shipping station, or vice versa; but the idea is that it might be better for every dairyman, for the space of one year's try-out, to take a lower price in order that in succeeding years he and his mighty band can ask and get a higher price, fair and legitimate and profitable, instead of reducing the League, so far tried and true blue, to nothing again, where each man will be defenseless and alone—the helpless pawn once more of these same Bordens and Nestles and all the rest who pretend, like the wily fox of story fame, to love us dearly—if we will only permit ourselves to drop our powerful club, the League, and meekly be gobbled up.

And as for the lowering of milk standards in regard to purity and cleanliness, the League has never had this part of our job in hand, that being the pet duty of the various boards of health in our distributing centers and overseen by local buyers of milk-fat. But it is conceivable that in time the League would take this necessary part of dairying under its wing, as perhaps it has already where acting as buyer, and would insist upon and maintain a standard high enough to satisfy and please the most fastidious and particular—under our own brand, Dairymen's League products. In that event, every member would be regularly inspected as Bordens have done and as the New York Board of Health has done, in order that our League milk might be advertised and sold as the purest and best produceable anywhere. Such a standard is right and necessary and it goes without saying that we would be well paid for our extra pains and trouble—because we are the League and we, if we aren't to become sausage for the foxes, will be in a position to pretty nearly get what we go after. But we won't get our price or become the leading and most progressive and prosperous dairymen of this or any other country if we choose to pick too many little flaws in the present scheme of saving the pieces, or if we prefer to kid ourselves into the belief that the manufacturers, et al, have our future interests at heart more than the organization formed when we were at bay, of you and me and our next-door neighbor, and which naturally now seeks to solve huge difficulties in the only possible way for fairness and equality to all.

But in the face of such obvious truths, nearly half of us refuse to be convinced of the genuineness of our own motives—for we must keep constantly before us the fact that we are the League—and instead we desire to assume that we are going into new and untried fields where a noose surely awaits the neck of every man who takes a fatal step and signs his John Henry irrevocably—for a year. We refuse to be convinced by the examples in signing set by nine out of ten of the leading and largest dairymen in every community—the very men who have the most to risk and who have rarely been known to take a step which involves probable losses. We refuse to listen to the advice of the great Farm Bureau which as fast as possible is fostering just such co-operative associations and mutual and national organizations to the glory and increased profits of farmers everywhere. We refuse to be influenced by the five years' experience of the California citrus-growers whose prosperity and success were recently chronicled in detail in these very pages and who operate under an ironclad contract of twenty years' duration, which so far has put their product, Sunkist oranges and lemons, into every home in America and has made their growers financially independent. We refuse to be convinced that pooling one's product, where it is a question at present of taking care of an inevitable surplus at a certain time of year, is neither fool-hardy nor risky, and the fact that our chief competitors, the Danes, have put this scheme into practice for several years past and have become rich farmers thereby has no weight with minds accustomed to suspicion and pessimism and who balk at progress in any form which differs with the old and worn-out.

Theodore Roosevelt once advised in time of stress and durance vile to speak softly but carry a big stick. The dairymen of our fathers' time did not always speak softly when the milk buyers had them by the scruff of the neck and each month shook every penny obtainable from each little for-himself-alone patron. But whether they spoke softly or not, cut no ice whatever with the strong and very profit-hungry foxes, for the victims could not call in the aid of neighbors who were in the selfsame boat and none of whom had never heard of carrying a big stick to bring cruel and greedy profit-eaters to terms. But we, the sons and daughters, finally made up our minds that the richly fat corporations buying our milk were foxes in truth, and if anybody saved the new generation from their lust, it would have to be ourselves who did it. So we proceeded to do it without further ado, and, beginning with five years back, we joined in packs, as the dealers had shown us how, to defend ourselves from their wily attacks—and the big stick we carried was and is called the League.

Our big stick has served us pretty thoroughly several times in the past, but heavens! how mad it made our hunters! They fairly foamed at the mouth to see us handle them easily after one or two scrimmages to the death, and they vowed they would break our club, the League, if it took them four generations to do it. And I'll say they are still trying, and trying harder than they ever tried, this fall of 1920. They are writing subtle advertisements in the big New York dailies to poison the minds of our

GUERNSEY CHAMPIONS AT THE MARYLAND STATE FAIR

Gerar Etta, winner of the highest award among the females, is owned by Louis McL. Merryman of Maryland and Audacity of Edgemoor, purple ribbon male, is herd sire at Brooklandwood Farms, Maryland.

How Much Does Milk Cost You?

If you're feeding whole grain, milk production is costing you too much. Vitex is a year round mixed feed that lowers feeding costs, increases the milk yield and keeps the herd healthier. It contains 24% protein, the element milk cows need.

WISCONSIN DAIRY FEED

is made from high quality milk producing ingredients such as cottonseed meal, oil meal, gluten feed, wheat bran, etc. It is mixed by a special process that makes each sack run uniform. You can gauge your feeding exactly—no chance of waste or under nourishment. The even run also makes Vitex a safe feed for mixed herds.

4-ALL A Meat and Strength Builder

For horses, hogs, sheep and beef cattle. As scientifically mixed as Vitex. It keeps horses in condition and fattens meat animals at big saving over grain ration.

Ask your feed dealer or write us.

markets as usual, and they are buying up newspaper space in all the dairying sections by the pageful in an endeavor to get under the hide of the ignorant and fearsome farmer who has not yet signed the pooling contract and who welcomes the repetition and then some faults or weaknesses found in the new plan—but the only workable plan nevertheless.

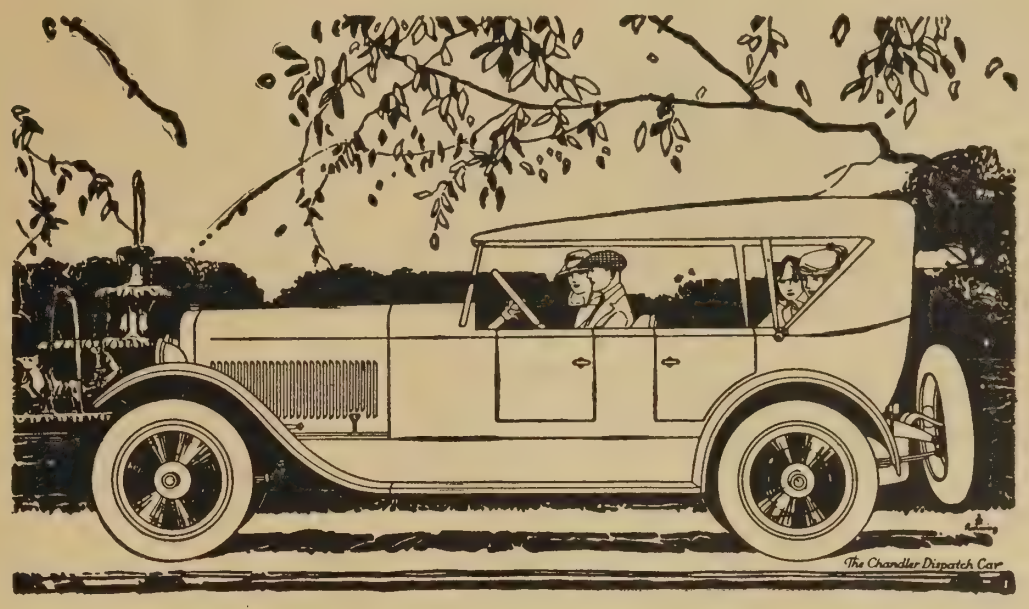
They are fiercely hoping that they can scare enough of these doubters into breaking the League at this critical test, then yum! yum! won't the silly fools make a good breakfast when they have deserted the pack and the pack itself has been scattered to the four winds!

It does seem odd and almost unbelievable that some of us want to insist that we will fail in this great venture, instead of working and boosting and making sure by every possible and practical plan that we won't. In other words, if we refuse to get behind this co-operative method of disposing of our milk, in so many ways we announce to the world that we are quitters—mean little quitters who turn around and knife our rescuer in the back because we think, after saving us, he is going to turn about and play a trick on us after all. So we raise quibbles and questions and find fault with this term and that and intimate that the old way of milk-selling wasn't as bad as it was painted anyway. We guess we aren't going to sell our milk for what Bill Bowers gets, for our milk is cleaner and better and so on, and we are out for the extra penny to be had today through past efforts of the League instead of the extra dollar to be had under the rules of co-operation only—tomorrow.

And we own ourselves to be just naturally a little contrary and ultra-conservative and far from public-spirited when we balk at joining with the rest of the boys in a mighty effort to save the whole pack instead of merely parts of it as has been done in the past; and we acknowledge once and for all that we distrust the other fellow, the remaining 84,000 of us, and that progressive co-operation as it is being put into practice more and more is a step beyond our grasping.

The title to these frankly reproachful words is—Play the Game. It can not be expected that the entire 85,000 milk producers will unanimously join in a 1920 millenium of each thinking in step with the other, but it would seem that we, the League, might muster 50,000 of us to try out the pooling plan which, if we unitedly support it, has the greatest possibilities yet for permitting us to handle our own business at the natural end, and with higher standards and profits than we have ever known. Some day, if we decide to act the parts of sensible and thoughtful men and women instead of being scared at bogey men conjured up by our enemies in sheep's clothing, we will see our League butter and cheese and canned and dried milks demanded by the particular consumer in every little hamlet in the Union and abroad. And why? Because we will produce milk as one man, in the cleanest, most efficient, and profitable ways known to science and common sense, and our milk will be handled by one great middleman—ourselves—instead of by forty different competing ones all of whom must get as much or more out of it today as the maker himself. And we will be so formidable and yet so right and our products so good and so necessary to human welfare by virtue of national advertising patterned after that most effective kind adopted by Sunkist growers, that our public will just naturally increase their consumption, even as with oranges and lemons, and our problem will not be to sell our milk at a loss during the summer surplus, as now, but we will be surely confronted with the pleasurable task of producing yet more and more milk to feed a milk-educated America—as every intelligent friend of the dairyman has preached and preached and preached for, lo, these many years.

And if we pool together and work enthusiastically and with faith in each other and in our cause, the price to the consumer will be lowered instead of boosted, as now follows every raise in our own price, and yet we will receive our own costs and profits into the bargain. Of course all this is a step in advance of our plans for the present, the plan of pooling merely being to sell the milk at the producing end, but the handling of it entirely, from producer to consumer, will logically follow as the day follows the night—and then good-by to constant trouble in the shape of our old fox-like enemies, the middlemen, forever.



And all this is known and appreciated by our dear and only friends, the buyers, even though we rather blindly fail to quite see our opportunities as they are presented to us this fall. So they are fighting desperately to maintain their old hold on us and are trying by every clever means at their power to keep that vital two-thirds from keeping faith with the nearly victorious pack. The middlemen can see their end clearly if we find our capabilities and strength are yearly growing, and they want us to think that we can't safely handle our own business—can't safely co-operate and stick together, and that others had best have a finger in the pie.

The Morning Sun of Binghampton,

CHANDLER SIX

Famous For Its Marvelous Motor

Thousands Choose the Chandler For Its Known Superiority

THE thousands who are buying Chandler cars every month do not choose the Chandler just because of the fairness of its price. They choose it for its real worth. They choose it because they know what a good car it is.

More than eighty thousand owners have expressed their preference for the Chandler because of its marvelous motor, the one motor that for seven years has been constantly refined and developed to a state of approximate perfection. They have shown preference for the sturdiness and stability of its entire chassis, and for the comfort and beauty of its bodies.

The Chandler today leads distinctly because of its known superiority.

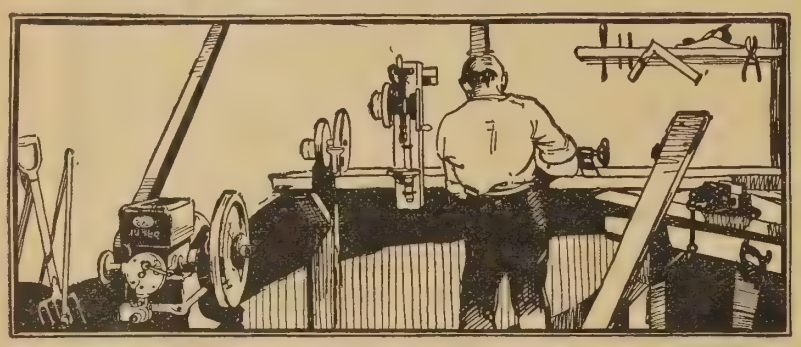
THE CHANDLER MOTOR CAR COMPANY
CLEVELAND, OHIO

FOR SALE AT BARGAIN
Northern Illinois Stock Farm

Extensively developed dairy cattle and hog farm. Twenty-five miles from Chicago loop. Fully stocked with fine quality, popularly bred cattle and hogs. Completely equipped with new, modern buildings for raising of pure-bred stock. If interested, write E. A. W., Room 804, 111 W. Monroe St., Chicago.

JUMBO FARM ENGINES



Because they always start easily and give economical, dependable power, more than 100,000 Jumbo Engines are regarded as paying investments by their owners

Save Repair Bills and Valuable Time

Now is a good time to rig up a small power repair shop with a few feet of line shaft and belt, some hangers and pulleys, a small drill press, an emery wheel and a Jumbo Engine to drive them. This simple repair outfit will enable you to make many emergency repairs next season when minutes of delay mean dollars of loss in crop values. Jumbo Engines are built for farmers by men who know farmers' problems. 1¾ to 12 h. p.

Organization Work in New York

H. H. LYON, NEW YORK

ORGANIZATION work continues in New York State. The wool pool has seemed to hesitate at times, but is certainly progressing. The reports of it from other states are encouraging. Here we now consider it assured, but hardly likely to include a major portion of the clip of the state. If we get forty per cent this year the situation is not bad. A half million pounds now seems assured with a possibility of more.

The effect of pooling, taking the country over, now appears to be the elimination of the wool speculator, and this is admitted by them every now and then. Moreover, there is said to be practically no storage of wool in either New York or Boston. Big prices are not looked for by farmers but fair returns are.

The Farm Bureau

Omitting for the moment the really big organization movement, the pooling in the Dairymen's League, we come to the farm bureaus and the federation. Has the federation of farm bureaus done anything for New York is a question by some. An answer, not infrequent, is a counter question, what has New York put into it? Perhaps six thousand dollars, they say, but the West has invested largely. They are entitled to more. They have more to put in it is true, but are we getting what we pay for? Evidently our state leaders think that we are. Even on our slender investment we are members of it, and not without influence. We need a national organization. There is none other that can do the same necessary service that the federation can.

Granting this, we must continue to be numbered in the federation even if we are able to pay only a small share. With small payments we get less out, but we may come to the point where we can pay more and then get more. Anyway the federation needs New York. It needs some of our men. Our conditions may be a little adverse in some ways, but adversity is good for folks usually, and we send representatives that are needed in the councils. We need to be a bit patient here at home and a little patience may be exercised elsewhere. Farm bureaus started here and we are going to stay by them I am sure.

Last year our membership fees were advanced from one dollar to two. It is proposed to retain the two dollar fee another year but to increase if possible our membership from about 60,000 to 70,000. There has been some talk of making membership five dollars, and this is undoubtedly the aim by another year after the next. If this can be done and the membership continued we will have money to work with. To us it looks like a big undertaking, but our leaders claim to be optimists. If the thing is what we need, as it looks, then go ahead and get it.

The G. L. F. Exchange

We have often commented on the G. L. F. Exchange, another feature of our organization work. Like all others it has its critics. It is not yet on a complete working basis although it is doing much. Funds have been subscribed and more can be had if proper use can be shown. Local organization under the Exchange is now going on. There is little that can be accomplished for the farmer unless there is some local machinery. Take the feed line, for example, which is the one that farmers first think of when the Exchange is mentioned. It looks as though little can be accomplished unless thorough local arrangements are completed.

As regards seeds, the farm bureau has been instrumental in securing for us better qualities. Now the G. L. F. Exchange is understood to be taking up this work of good seed, indeed has been doing it for some time as the Grange Exchange. No attempt is made to compete in relation to price, but only on quality. It is true that we are much better protected as regards quality by the laws of the state than formerly, but the Exchange will continue in the line of good quality. It is my conviction that we should patronize the Exchange as far as we can in order to support it. I doubt if we will loose very considerably on price, and I feel pretty sure that our seed quality may be worth any variation in price.

In common with others we are holding a county meeting to determine what we shall do locally to distribute seeds, feeds, and other commodities. It was this approaching meeting that set me to thinking along these lines of organization and to writing about them. It now appears that the Exchange is fully manned at headquarters. Mr. Hall, who has so efficiently managed the Grange Exchange, will remain in charge at Syracuse where the office has been and where a large

NASILLA, GRAND CHAMPION BROWN SWISS COW AT THE MINNESOTA STATE FAIR. OWNED BY F. P. MINETTE & SON OF MINNESOTA

Through an error in the report of this fair the issue of Hoard's Dairyman for September 24, page 391, gave credit to Believe, a cow from the same herd, for winning highest honors in her breed.

warehouse has been purchased. There will be a traffic manager, who has already been appointed. He will route the cars and look after the claims, etc. Seeds will be selected by experts in the field, and will be purchased by an experienced commercial man.

Coming now to feeds, an expert of twenty years' experience has been located in Buffalo in the Chamber of Commerce building where he will watch the markets, make purchases, and register sales. Grains are expected to be purchased from farmers' elevators in the west, and several mills are anxious to connect up on the sale of by-products. The Exchange is understood to be in position to compete with any concern in the feed line in a wholesale way. Of course it matters not how expert or how well paid are these men in charge unless sales can be made. Now that farmers are furnishing capital it is up to them to see that the Exchange sales are made.

How the Local Exchange will Operate

To make the situation as clear as possible, I hope to relate what was done at this county meeting. First we had an address by Director Webb of Cortland County explaining the above facts. Questions followed in answering which it developed that a county committee is needed. In this we continued the committee which had charge of raising our $30,000 of capital. These were the farm bureau president, the county league president, and the master of the Pomona Grange. This committee is to select a man or some men who will visit locals as needed, explain to them and help them to organize if they desire. Among the methods locally is that of selecting a committee, perhaps of five men, who may incorporate or not under our membership co-operation law. These men may appoint a purchasing agent or they may employ a man, dealer or otherwise, to handle feeds and other commodities.

These men are to be certified to the Exchange, or their appointee certified, by the county committee. Whoever is certified in this way is expected to enter into a contract with the Exchange. In this contract the Exchange is withheld from giving others the prices given the certified party, although others can secure cars of feed from the Exchange. On the other hand, the local committee is not, under ordinary conditions, permitted to purchase of other wholesalers. It is to be a support of the farmers' organization. In case no warehouse is established locally cars of feeds may be purchased at a price one dollar a ton above that quoted where a warehouse is maintained. If a warehouse is provided others may buy in car lots at a dollar a ton advance, and this dollar goes to the party maintaining the warehouse.

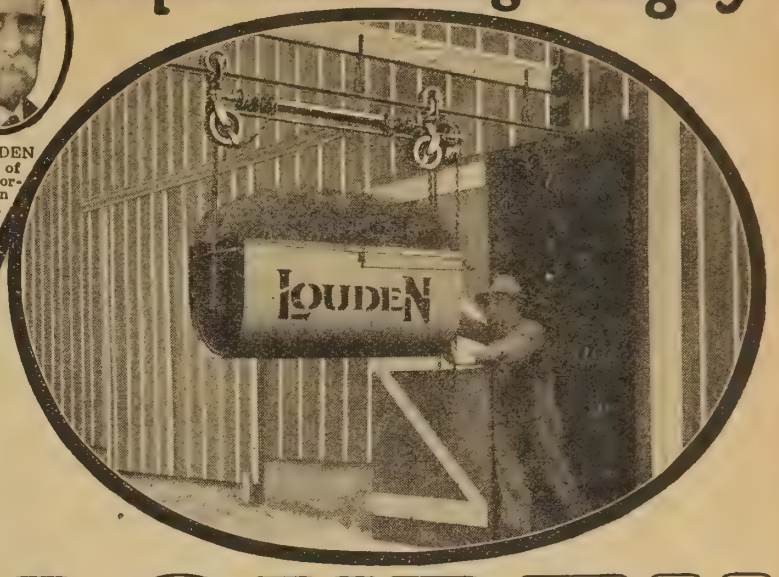
The party or parties conducting the warehouse may buy in as large amounts as they desire, stock up when low prices prevail and charge market advances. On the other hand they will be expected to drop with the market even if they lose money in so doing. It would seem as though the warehouse plan rather than the car door method would have the preference, but that depends upon local conditions. No very costly storage would be needed usually, but if there is storage there should be a switch. It will take some time to get all this arranged, and in many cases the car door plan may have the preference for this fall and winter. I have been told that some railroads will rent space in the freight depot, but I feel a little skeptical of this. There is ample room in many of the old freight depots.

In the contract between the Exchange and the local it is provided for its continuance for ten years, but it may be terminated in any June if a notice has been filed at a certain date considerably in advance of this. Much depends upon the loyalty of the farmers. Dealers are likely to hold prices pretty close while this plan is being worked over, and there may be cases where they will get in lower quotations than the farmers give, simply to put their organization out of business. The Exchange would seem to have one advantage in not being obliged to maintain a selling force traveling on the road. In any new effort of this sort of a co-operative nature there is much to be worked out, but it looks as though there might be good to come out of it. It is to be hoped that farmers will stay by the Exchange until it comes to an assured success.

To go back a little, it is well to state that the county man will be paid by the Exchange, say five dollars for a meeting and ten cents a mile for his auto. He will be employed only for the few days in which his services are needed. When the year comes around it is expected to pay six per cent on the investment, and then obtain a reserve fund of some magnitude. Finally profits are to be returned on the business after expenses, dividends, and reserve are taken care of. These profits go to both stockholders and those not stock-holders who have done business with the Exchange, but such profits are to be distributed in double the amount to the former class over that paid the non-members. The law requires that all may purchase if they wish.

Peat for Fuel

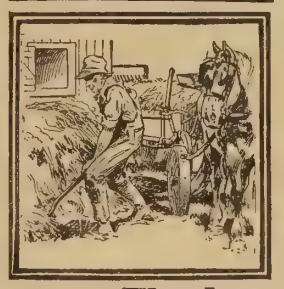
The rise in the price of coal has created interest in the utilization of the large deposits of peat in this country, and this interest has brought out the invention of machinery for the digging of peat and its preparation for use in manufactures. In speaking before the American Peat Society at Madison recently, Mr. Herbert Garnett discussed the possibilities of peat as a fuel and described the new methods of handling it.



Machines are now available that will dig the peat to a depth of seven feet and spread it out on the field to a depth of four inches. Peat contains 80% water, but this is reduced by open air drying to 20% in 90 days and it can then be burned. The blocks are crushed to the usual coal sizes and the fuel is said to cost about $2.25 per ton at the swamp. It is suitable for use in all classes of stoves and furnaces with the possible exception of coal base burners. It burns with a long flame, is smokeless, does not form cinders or clinkers, and the only residue is a fine, light ash.

Mr. Garnett also discussed the type of new machinery developed to prepare peat for factory use. Plants are nearing completion in Minnesota where the peat is further dried and crushed to a fine dust. The pulverized fuel is said to be very efficient in the production of steam, but needs special machinery for feeding the large boilers.

Adequate records are necessary to the efficient management of any business. The farmer, to be successful, must be a business man as well as a grower of crops and producer of live stock. As a business man he should have suitable business records.



WM. LOUDEN
Originator of modern labor-saving barn equipment.

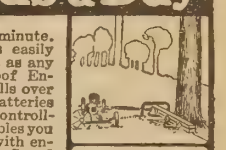
Stop Barn Cleaning Drudgery

LOUDEN
Litter Carriers

Take all the drudgery out of barn cleaning. There is no other job on the farm that the boy, the hired man, or even the farmer himself hates worse than to clean the barn with the time-wasting, back-breaking, dirty, old-fashioned wheelbarrow. The treacherous, slippery plank keeps you from going hub-deep into the slush—but it's a real job to stay on it.

Cleans Barn in Half the Time

The Louden Litter Carrier removes the manure from behind the animals and dumps it directly into a spreader or some out-of-the-way place. Cleans the barn in half the time. A 12-year old boy can do the work quicker and easier with a Louden Litter Carrier than a husky man could with the old-fashioned method.



The same labor-saving features and high quality workmanship which have been built into Louden Litter Carriers, are found in Louden Feed Carriers, Sanitary Cow Stalls and Stanchions, Animal Pens, Hay Unloading Tools, Power Hoists, Manger Divisions, Ventilators, Barn and Garage Door Hangers, Water Bowls—"Everything for the Barn." 224-page catalog giving full details, sent on request. No obligation.

Butter Prices Lower

Sluggish Movement of Undergrades Affects Prices of Fancy Grades —Conditions Unsettled

[Report by U. S. Bureau of Markets]

Butter markets broke sharply early in the week ending October 16 and closing prices ranged from 1½c to 5¼c lower in the different markets than at the close of the previous week. The greatest declines occurred at Chicago, where the feeling in centralized butter in carload lots was especially weak. For some time the spread between prices of 92-score and 86-score butter has been growing wider, and with undergrades failing to move at still lower prices fancy butter had to come down.

Holders of Storage Butter Worried

The situation during the week has been very serious. While the stocks of butter in storage are mostly in firm hands, and the majority of holders will be inclined to carry their stocks for some time yet before disposing of them at a loss, the trade feels considerable uneasiness. Dealers generally feel that if prices are lowered at this time, consumption will be improved on the undergrade butter and the market will be cleaned up in such a manner as to permit improvement later. One sign that tends to back this opinion is the continued use of privately owned stocks of butter by jobbers and chain-stores operators, some of whom will soon be in the market for new supplies.

Storage Stocks Heavy

The Bureau of Markets preliminary storage report released the first of the week showed holdings of creamery butter on October 1 to be 113,333,000 lbs., as compared with 121,816,000 lbs. last year on that date. According to this report the 15,000,000 lbs. shortage of September 1 was reduced during September to 8,500,000 lbs.

The American Creamery Butter Manufacturers Association's report for last week shows a decrease of 1.2% in the make under last week, and an increase of 19.1% over last year. This covers the output of 85 factories. Many other factories report output holding up well. Current receipts at the five markets were slightly lighter than the previous week but ran about 10% heavier than the corresponding week a year ago. Some condensery butter is arriving but no great quantity is evident on the open market.

The average wholesale prices on 92-score butter at five of the principal markets, for the week ending October 16, were as follows: New York, 59.8 cents; Chicago, 55.5 cents; Philadelphia, 58.4 cents; Boston, 59.4 cents; and San Francisco, 58.5 cents. For the corresponding week last year the average prices were 68c, 64.1c, 67.5c, 64.4c, and 62.5c, respectively. The receipts of butter at these markets were 7,619,753 lbs. as compared with 6,635,550 lbs. for the corresponding week last year and 8,243,341 lbs. for last week.

Trading Slow on Cheese

Further Drops Anticipated Before Movement of Stocks Approaches Normal—Storage Report

[Report by U. S. Bureau of Markets]

The week ending October 16 closed with cheese markets still weak and unsettled. On Monday at the Plymouth (Wis.) Cheese Exchange all styles except Double Daisies declined, sales of Twins being at 1½c lower than the previous week. There were further reductions in actual selling prices each day, until by Saturday some dealers at primary markets were willing to shade their original prices from 1½c to 3c. In distributing markets the weakness at country points was also felt, and while comparatively little buying was done, prices declined under continued pressure to sell.

To sum up the situation, the general feeling was that further price reductions would be necessary in order to stimulate trading, for many buyers have held out for lower markets, with the result that wholesale business especially has been rather slow. It is plainly a fact that dealers do not care to see any accumulation on the markets under existing conditions, and as no one is eager to store at prevailing prices it seems evident that price reductions must occur in order to keep goods moving.

For the United States as a whole storage holdings on October 1 were approximately 55,006,000 lbs., which represents a reduction of about 5,500,000 lbs. during September. While in 1919 storage holdings were excessive, it is of interest to note that stocks on October 1 were approximately 5,000,000 heavier than on September 1, just the reverse of this year. The high point for holdings during 1920, both for the four distributing markets and the country as a whole, seems to have been reached about September 1.

The average wholesale prices on American cheese, style Twins, for the week ending October 16, were as follows: New York, 27.9 cents; Chicago, 25 cents; Boston, 29.1 cents; San Francisco, 28.3 cents; and Wisconsin primary market, 25.6 cents. For the corresponding week last year the average prices at these markets were: 30.5c, 29c, 31.5c, 30.3c, and 28.6c, respectively. The total receipts of American cheese at these markets were 2,979,752 lbs., as compared with 3,565,855 lbs. for the corresponding week last year and 3,188,187 lbs. for last week.

Current Feed and Hay Prices

Markets Chaotic as Price Declines Continue

[Report by U. S. Bureau of Markets]

One of the worst declines experienced in the feed market took place during the week ending October 16. Gluten feed manufacturers reduced their price $5 per ton, with guaranty extended to December 1. Cottonseed meal was quoted lower practically every day, and new low prices were established for this commodity when 36% meal was offered around $37 Memphis and 43% meal at $38 f. o. b. Texas common points. Middlings, because of an oversupply, were offered $1 per ton less than bran.

Bran was in fair supply and did not follow the price trend of other feeds. Quotations were as follows: Minneapolis, $29.50; Kansas City, $29; Chicago, $33; Atlanta, $38; Philadelphia, $39; New York, $38.50; and Boston, $39.50.

The cottonseed meal market is in a demoralized condition, with 41% meal quoted as follows: Kansas City, $45; Boston, $52; and $50 at New York, Philadelphia, and Minneapolis.

Heavy offerings of linseed oil meal caused a decline of $5, $52 f. o. b. mill being asked in northeastern territory. Quotations were: $60.50 at St. Louis, $64 at Chicago, $59 at Philadelphia, $57 at New York, and $56 at Boston.

Gluten feed was quoted at $44.25 in St. Louis, $52 in Minneapolis, $43.75 in Chicago, $52 in Baltimore, $45 in Philadelphia, and $51.60 in Boston. Prices on hominy feed varied while middle west markets quoted around $38. Omaha quoted at $30 to $32. Yellow hominy was offered in Chicago at $33, with holders showing an inclination to consider lower bids.

Dullness still characterizes the hay market. No. 1 timothy is quoted at $34 in St. Louis, $25 in Minneapolis, $29 in Chicago, $32 in Memphis, $34 in Philadelphia, and $39 in New York. Mixed clover and timothy ranges from $18 in Kansas City and $21 in Minneapolis to $24 in Chicago and $34 in New York. Clover is about the same as mixed hay in markets quoting both.

No. 1 alfalfa is quoted at $21 in Omaha, $25 in Kansas City, $28 in Minneapolis, $30 in Chicago, $31 in Memphis, and $36 in Atlanta.

Fond Du Lac, Wis., Holstein Sale

The Holstein Breeders' Sale Co.'s first fall sale held at Fond du Lac, Wis., October 15, was more of a success than the average would indicate. Eighty-eight animals sold for a total of $19,795, but this included well over 20 bulls of all ages and breeding, several of which sold for less than $100.

Good animals sold for good fair prices. W. H. Wilson topped the sale with a 31-lb., 4-year-old daughter of Rag Apple Korndyke 8th that Adolph Lehner bought for $1,500.

Mack, Pohlman, and Wolff did the selling with F. H. Everson in the box. S. H. Bird managed the sale.

Following is a list of all animals selling for $300 or more and buyers:

J. F. Kasierski, Wisconsin	
Tomah June Hengerveld	$300
Bessie Oak Lodge	525
Alfred Backhaus, Wisconsin	
Tomah Lucy Pietertje De Kol 2d	$350
Mutual Netherland Konigen	390
Edward Missling, Wisconsin	
Tomah Aurora De Kol Johanna	$355
G. H. Scovel, Wisconsin	
Tomah Johanna Sarcastic 2d	$300
F. H. Jones, Wisconsin	
Tomah Bertie Brookside DeKol 3d	$340
T. C. Wilsie, Wisconsin	
Pearl Pauline Johanna	$350
Model Ann Fobes Pontiac	420
Magnet Johanna De Kol	385
Klazerina Pontiac Longfield 2d	300
D. W. Merrill, Wisconsin	
Snowball De Kol Colantha	$380
Robt. Byrnes, Wisconsin	
Piebe Wayne Clover Lawn	$550
H. E. Braatz, Wisconsin	
Snowflake De Kol Piebe Champion	$455
C. L. Finder & Son, Wisconsin	
Cora De Kol Jewel	$310
W. L. Holbrook, Wisconsin	
Canary Segis Johanna De Kol	$330
T. J. Pinkerton, Wisconsin	
Beauty De Kol Butter Boy	$310
Erich Mueller, Wisconsin

Adolph Lehner, Wisconsin	
Fairview Milla Korndyke 2d	$1,500
J. B. Cain, Wisconsin	
Knopi Snowflake Piebe	$300
Knopi Olive Homestead	460
Trutchell Bros., Wisconsin	
Lady Champion Johanna	$300

Avoid the Use of old Rye

Many farmers have had the unhappy experience of planting old rye. Unlike wheat the vitality of the rye germ seems to decline after the first year much more rapidly than most other grains. Therefore, rye that is over a year old should not be used for seed.

Coming Events

Nov. 9—11, 1920, Wisconsin Buttermakers' Association meets in Madison. Secretary, H. C. Larson, Wisconsin.

Dec. 9-11, 1920—International Farm Congress meets at Kansas City, Mo.

Jan. 4—6, 1921, Wisconsin Cheesemakers' Association meets in Milwaukee. Secretary, J. L. Sammis, Madison, Wis.

Farmers' National Congress, November 16 to 19, at Columbus, Ohio. A. P. Sandles, Sec., Columbus, Ohio.

Price Reduction
James Barn Equipment

Reductions in prices of James Barn Equipment, averaging 20 per cent, are now effective to and including November 15, 1920, for shipment prior to February 1, 1921. Prices are guaranteed against decline to date of shipment.

Following are the reasons on which this reduction is based:

(1) We are in whole hearted agreement with all those who believe that industry, as well as the general public, will be tremendously benefited if prices in all lines can be brought to a lower level.

(2) There is, however, nothing in the present situation that justifies reduction of prices of James' equipment.

Steel, malleable, fuel, power, all overhead items and labor cost as much as ever before.

Nor can we see any present evidence of reductions in wage rates, nor in cost of raw materials during the coming season.

(3) To reduce James' prices, we must, therefore, find some means of reducing manufacturing and selling costs through increased efficiency. We believe this increased efficiency can be brought about.

To do our part, we have reduced our prices for the period to and including November 15 to that level to which the public believes prices are to come.

It is our hope that on November 15, these reduced prices may be continued.

Whether that will be possible depends on whether increased sales brought about by this reduction will be enough to materially reduce manufacturing and selling costs.

If the increased sales are not sufficient, it will be necessary to restore prices to the previous higher level.

James Manufacturing Company, Fort Atkinson, Wisconsin

The James way

Labor Saving Equipment for the Dairy Barn

First National Jersey Cattle Sale

Shreveport, La., Oct. 28 to Nov. 7, 1920

About a year ago, during the progress of the State Fair of Texas at Dallas and the State Fair of Louisiana at Shreveport, many of the Jersey cattle breeders of the South urged some special demonstration of the breed in their territory. They felt that the entire dairy industry in the South was taking on new life and that some added stimulus at this time was both desirable and likely to be highly beneficial to that whole section.

Some officials of the American Jersey Cattle Club were at Dallas and Shreveport, and were impressed by these considerations as presented by the Jersey breeders of the South. They brought back to club headquarters a keen desire to do something that would meet the wishes of southern Jersey breeders. The board of directors of the American Jersey Cattle Club appropriated $2,000 for Jersey premiums for a National Jersey Show to be held either at Dallas or Shreveport. On account of the dates of the State Fair at Dallas conflicting with those of the National Dairy Show at Chicago, it was thought best to have the National Jersey Show at Shreveport, La., during the state fair.

Louisiana Jersey breeders have added to the club's two thousand dollars, one thousand more raised by subscription, and the State Fair of Louisiana has appropriated three thousand dollars. This makes a total of six thousand dollars for Jersey premiums, the largest amount in premiums ever offered for Jerseys at any fair. The premium money has been distributed over twenty-six classes, and with a few exceptions there are eight premiums in each class. Most of these premiums run from $45 for the first to $5 for the last. In two cases—for Register of Merit cows—they run from $50 for the first to $15 for the last. In the case of exhibitor's herd they run from $100 for the first to $10 for the last. For breeder's young herd and calf herd they run from $170 for the first to $20 for the last. The distribution of the premium money in eight premiums in so many classes gives a great many exhibitors a good chance to get into the money, and should bring about one of the finest Jersey shows ever staged.

The Southern Jersey breeders have expressed themselves as very desirous of having herds come from the North and the East. They said: "Perhaps these herds will take the most premiums, but we do not wish to be selfish in this matter; we want those herds here as an object lesson to all southern breeders of what Jerseys are, and as standards for southern breeders to aspire to."

It has been in the minds of the directors of the American Jersey Cattle Club that this first National Jersey Show may be followed by other National Jersey Shows in the South, as they feel that the South offers a very promising territory for the development of the dairy industry. Whether their ideas along this line will develop or not will depend altogether on the success of the first National Jersey Show. Its success will depend upon the patronage given it by the southern breeders. If they turn out in such numbers as to prove irrefutably that the South is interested, and that it is ready and willing to do its utmost to benefit by the great show that is staged for 1920, it will be the greatest encouragement to the American Jersey Cattle Club; it will not only be gratified by what it is doing this year, but it will be a great incentive for a similar show to be staged at some other point in the South in 1921.

The American Jersey Cattle Club will be represented at Shreveport by its president and others of its official staff. In order to bring about a great get-together of Jersey breeders at Shreveport, a Jersey breeders' banquet will be held under the auspices of the club at the Hotel Youree, Shreveport, on the evening of November 5th. It is intended to provide both instruction and entertainment for the guests attending that banquet.

Now, the State Fair of Louisiana, through its president and secretary, has done its part; the Louisiana Jersey breeders have done their part; the American Jersey Cattle Club has done its part; the rest is up to the breeders of the South, not only those of Louisiana, but those of Texas, Alabama, in fact all the states in the southern section of the country. Using the slogan of the state fair of Louisiana, we say to all the breeders of the South: "It's *Your* Fair, So Be There."

R. M. Gow, Sec.,
The American Jersey Cattle Club.

Write down your garden plans for next summer now before you forget what you learned this year.

SHARPLES MOTO-MILKER

Electric Milker for 8 to 20 Cows

THIS wonderful new milker is ready to use when unboxed. No pipe lines nor engine necessary. It milks 2 cows at a time. One man alone can milk a 15-cow herd in about 45 minutes. Let one man do all your milking. You will save over $300 a year in wages.

Uses compressed air to squeeze the teats and suction to suck out the milk. Gentle and comfortable to the cows and in most cases increases their milk yield. Has the patented Sharples teat cups that are in daily use on over 1,000,000 cows.

Our Famous Pipe-Line Milker

For 8 years our pipe-line milker with the patented compressed air squeeze has stood unquestioned at the head of the milker industry. Mr. Sharples' invention of compressed air to squeeze and massage the teats first made milking machines possible. This use of compressed air is broadly patented, and can be used by no other manufacturer. For this reason, the Sharples

Portable and Needs No Installation

milks much faster than any other machine, and as every farmer knows, fast milking increases the milk yield.

Prices Positively Will Not Decrease

Sharples prices will *not* decrease. We will give anyone a written guarantee of this on request. Our prices have increased only 9% during the war and a price decrease is therefore out of the question.

Association Notes

Barnesville, Ohio:—September market milk sold for $3.40 to $4 per cwt. Feed prices are as follows: Larro, $3.60 per cwt.; oil meal, $3.50; Armour's Dairy, $3.60; cottonseed meal, $3.50; bran, $2.75; hominy, $3.50; oats, 70c per bushel; corn, $1.25 per bushel.

Claremont and Lebanon, New Hampshire:—Milk testing 3.7% sold for $4 per cwt. in September. The creamery paid 75c per pound for fat. Milk retails for 16c per quart and butter for 75c per pound. Feed prices are: Bran, $60 per ton; cottonseed meal, $76; linseed meal, $76; gluten, $77; corn meal, $71; hominy, $74; ground oats, $64; provender, $68; Stock Feed, $69; mixed feed, $73; middlings, $85; ready mixed rations, $77 to $87.

Canton, Pennsylvania:—The refusal of manufacturers to buy milk threatened a number of the members of this association with the loss of a market; however, efforts are being made to meet the situation. Butterfat prices have remained good and the members who have patronized the creameries have prospered for the past year. September market milk testing 3% sold for $3.55 per cwt. and 4c per point above. The creamery paid 70c per pound for fat. Milk retails for 15c per quart and butter for 70c per pound. Cottonseed meal is rated at $70 per ton; oil meal, $75; gluten, $67; wheat bran, $60; hominy, $75; middlings, $60; corn meal, $65; ground oats, $60; Unicorn Dairy Feed, $79; Curtis Dairy Feed, $75.

Butler—Road, Ohio:—September market milk testing 3.5% sold for $4.14 per cwt. and 5c per point above. The condensery paid 56c per pound for fat. Feed prices are: Oats, $2 per cwt.; corn, $2.25; bran, $56 per ton; oil meal, $70; cottonseed meal, $65.

Western Broome, New York:—Unprofitable cows are continually being disposed of with the result that dairies are improving greatly. Dairymen are now feeding almost as much grain and roughage as during the winter months. Grain prices are quite reasonable, but the farmers in general are expecting to purchase through the G. L. F. just organized with headquarters at Syracuse, New York. Three per cent milk sold for $3.65 in September. Milk retails for 15c per quart, butter for 65c per pound, and cheese for 38c per pound. Feed prices are: corn meal, $67 per ton; gluten, $70; oil meal, $71; cottonseed meal, $71; wheat bran, $55; ground oats, $62; hay, $30; silage, $10.

Oldham County, Kentucky:—During the month of September, six unprofitable cows were culled out. The farmers will co-operate in buying mill feeds and cottonseed meal in carload lots this fall. Market milk testing 3.5% sold for 30c per gallon. The creamery paid 58c to 60c per pound for fat. Cow Chow is sold for $85 per ton; bran, $60; ground corn, $57; oil meal, $85; cottonseed meal, $75 to $80; hominy, $75; oats, 80c per bushel.

Nelson County, Kentucky:—A milk route between Bardstown and Louisville has been organized to take care of the milk produced by dairymen who are conveniently located with respect to the railroad. At present this is somewhat of an experiment but it is expected to be running along smoothly in the near future. Several farmers living along this route have bought quite a few more cows. There is also a movement to form a dairy association for the production of high quality milk for a special market. We expect to have a co-operative bull association before long. September milk testing 4% sold for $3.48 per cwt. Milk retails for 16c per quart and butter for 60c per pound.

Fairbault, Minnesota:—The condensery here has closed its doors until it can dispose of the product already on hand. It has promised to pay the farmers in full as soon as this product has been sold. Market milk testing 3.5% sold for $2.75 per cwt. in August. The creamery paid 63c per pound for fat. Butter retails for 65c per pound. Alfalfa is rated at $30 per ton; bran, $40; oil meal, $67; oats, 60c per bushel.

Clatsop County, Oregon:—Two pure-bred Guernsey bulls and one pure-bred Jersey bull were purchased during August. Milk testing 3.8% sold for $2.90 per cwt. and 5c per point above. Dairymen received 69c for sweet cream and 64c for sour cream. Local feed prices are: Millrun, $62 per ton; barley (rolled), $80; mixed molasses feed, $54.

Nestucca, Oregon:—Dairymen of this section received 65c to 70c for butterfat in milk from the cheese factory. Fisher's Dairy Feed sells for $70 per ton; millrun, $80; ground

oats and peas, $68. Four cows were sold for beef during August.

Coos Bay, Oregon:—Five cows were sold in August for beef. One pure-bred Holstein bull and one pure-bred Jersey bull were purchased. All separators in use in this section have been tested and found satisfactory. Dairymen in this section sold milk in lumber camps for 32c per gallon. Sweet cream sells for 61c. Feed prices are: pasture, $2 for tillable, $1 for untillable; green feed, ½c per pound; cocoanut meal, $70 per ton.

Rogue River, Oregon:—Dairymen here received $3.60 per cwt. for milk during August. Milk retails for 14c per quart. Sweet cream sells for 74c and sour cream for 64c. Local feed prices are: barley, $69 per ton; millrun, $65; hay, $25; S. B. Dairy Feed, $52.

Bandon Co-operative, Oregon:—One separator was tested during August. Five cows were sold for beef. One silo is being erected. Dairymen in this locality received $3.25 for 4% milk. The condensery paid $3.10 to $3.25 per cwt. for milk.

Does It Pay to Feed Well?

Test Association Records Show That It Does

A great many farmers still question the economy of liberal feeding, and especially the feeding of high priced concentrates. These men argue that the liberal feeding of good feeds increases the cost of keeping the cows and that the extra milk and butterfat obtained through such feeding costs more than it is worth.

The record of John Garaghty's herd of the McGregor Cow Testing Association in Iowa furnishes some very definite proof that the liberal feeding of a balanced ration pays large dividends. Mr. Garaghty and his sons who operate the farm together were of the opinion that it did not pay to feed much grain and especially high priced protein feeds, such as cottonseed meal. However, during their first year in the McGregor Cow Test Association the gospel of good, careful feeding was preached to them by the tester so that in the second year some changes were made in the feeding operations.

In the first place the pasture season was cut down from six and a half months to five months. This necessitated the feeding of more silage to make up for the decrease in pasture. This alone doubtless helped considerably to increase the production, for it is by pasturing cattle too early or too late in the season that production is often cut down. And in the state of Iowa five months is a sufficiently long pasture season as a longer season generally means that the cattle are turned on pasture too early, before the grass has grown enough, or it means that the cattle are required to get their feed from frozen stock fields late in the fall, or both. During the winter of the second year the grain for the cows was increased from 495 lbs. of ground oats alone to more than a thousand pounds of ground oats, corn, and bran together for each cow and also more than 200 pounds of cottonseed meal was added to each cow's ration to balance the other feeds.

Briefly, the results of more careful and more liberal feeding in this herd were that all the cows milked both years increased their average production from 304 pounds of butterfat to 418 pounds of butterfat. And that by increasing the feed cost on the average per cow from $53 to $83, the incomes above feed cost for each cow increased from about $129 to about $218 or, in other words, by expending wisely $30 more per cow for feed the income per cow was increased $89.

Iowa. C. L. BLACKMAN.

Supervisors Needed

Owing to the fact that four supervisors returned to college, we are in need of supervisors to carry on the official testing work in the state of Washington. Anyone desiring to become better acquainted with improved dairy methods and especially in the handling of pure-bred dairy cattle will find that a few months' experience as a supervisor will be a very valuable means of education.

In this state, the present salary for supervisors with less than three months' experience is $75 per month and necessary traveling expenses. After satisfactorily carrying on the work for three months the salary is raised to $90 per month and traveling expenses. These expenses include railroad fare, stage hire, car fare, hotel bills, meals, postage, telegrams, and any other expenses necessary to carry on the work. The supervisors are regularly employed, no time being deducted for traveling from place to place.

Anyone desiring further information about the work should write to Fred S. Martin, Supt. of Official Testing, Pullman, Washington.

There are some men who can obey orders; and there are some men who can get things done.

It is well to be obedient, it is better to be resourceful.

When Alexander could not untie the Gordian knot he cut it with his sword.

A resourceful man is one who, when he cannot do a thing one way, does it another.

He keeps trying.

When it is time to quit, he begins.

When he is licked, he begins fighting again.

There are three rules for success. The first is: Go on. The second is: Go on. And the third is: Go on.—Current Opinion.

"BALL (Red Ball TRADE MARK) BAND"

Look for the Arctic with the Red Ball

You can be sure of having warm feet and warm ankles when you wear "Ball-Band" Arctics.

Dry shoes, too—and it's expensive to let shoe-leather be soaked and ruined, nowadays.

"Ball-Band" Rubber Boots are comfortable, and they fit the way you like a boot to fit.

You'll find any height and style in "Ball-Band" Light-Weight Rubbers.

All "Ball-Band" Rubber Footwear gives you More Days Wear, at lowest cost per day's wear. That's one reason why sixty thousand stores sell "Ball-Band."

Ask your dealer for our free illustrated booklet, "More Days Wear."

Washington, D. C., Weekly News

[SPECIAL TO HOARD'S DAIRYMAN]

Washington, October 20—So great national interest attaches to the conference of farmer representatives held here last week, and the meetings between these men and the heads of the Federal Reserve Board and the secretary of the treasury, that I believe the fact that these conferences were only in small part representative of the milk and dairy interests does not prevent what happened from being of first interest to the readers of Hoard's Dairyman.

The farmers' conference was called to consider financial problems, based on the assumption that the refusal of the banks, and more especially of the Federal Reserve Board, to take special steps to increase loans to farmers was one of the chief factors in the cause of the slump in prices of farm products. The call issued from the center of the cotton territory and was signed by J. S. Wanamaker of the American Cotton Association, Charles S. Barrett of the Farmers' Union, and J. J. Brown, State Marketing Commissioner of Georgia.

It met in Washington on Tuesday, October 12. There were about two hundred persons present during the two days. The cotton states were represented not only by many farmers and cotton growers, but also by Senators Smith of South Carolina, Smith of Georgia, Harris of Alabama, and Overman of North Carolina, Ex-Senator Marion Butler of the latter state, several congressmen, and a number of bankers and business men. Some other states were represented, especially Kansas, Pennsylvania, and New York, several farmer representatives in Washington attended, but as will appear, the conference revolved about cotton. This is not made plain in newspaper reports which were sent out.

A general committee, and committees on cotton, tobacco, wheat, and milk, were appointed and presented reports setting out the marketing situation in these staple crops. I will quote from the general committee signed by the committee of which J. J. Brown of Georgia was chairman and which included representatives from Pennsylvania, Kansas, Texas, Arizona, South Carolina, New Jersey, Louisiana, and West Virginia, and some of the Washington representatives.

"The condition in agriculture," says this report, "is now desperate. The condition of mind of the farm population is now ominous. Producers of all crops come to believe that the hand of the government is against them. This state of mind can only be changed by a frank and fair attitude on the part of those in authority—the test of which can only be their acts." This recital then goes on to say that the present slump in prices has been brought about by restriction of credits, raising the discount rate, discontinuing the War Finance Corporation, and the interpretation placed on statements of the Secretary of the Treasury and the governor of the federal reserve board that "commodity prices, especially prices of farm products, were too high."

Space will not permit a longer quotation but this fairly typifies the general character of this statement. I will quote more at length from the report of the milk committee, although this report is couched in far less drastic language than that of the cotton committee which bitterly assails the government for inducing extra efforts to produce cotton and then permitting the present market slump.

The recommendations of the committee on milk were as follows:

1. Adoption by the federal reserve system of a more liberal policy in the extension of credit to farmers and farmers' organizations on stored dairy products.

2. Furthering the organization of milk producers in order to bring into the National Milk Producers' Federation on a departmental basis all the farmer-owned and co-operative creameries, cheese factories, and condenseries, so that the milk producers may present a solid front in solving the marketing phases of the problem.

3. Extension of co-operative buying of dairy feeds and other supplies.

4. A nation-wide educational campaign among city consumers, particularly among organized labor so that they may better understand the actual conditions surrounding the dairy farmer, and also bring about a wider knowledge of the food value of milk and other dairy products.

5. Enactment by Congress of legislation designed to protect American dairy farmers from the importation of foreign dairy products, and substitutes for dairy products such as oriental vegetable oils.

Respectfully submitted,
FREDERICK SHANGLE, New Jersey,
CHARLES W. HOLMAN, Wisconsin,
J. H. KIMBLE, Maryland,
EUGENE H. PORTER, Albany, N. Y.

It may be said in passing that this milk report was not only the most conservative of all the reports, but also the only one which dealt particularly with constructive suggestions other than financial demands.

On Wednesday, Thursday, and Friday, the conference presented its demands to Governor Harding of the Federal Reserve Board, Secretary Houston of the Treasury Department, and the White House.

An absolute refusal to concede or grant any demand for increased loans, any change in attitude of the Reserve Board, for the resuscitation of the War Finance Corporation, a revolving fund, or any other method of relief asked for by the farmer representatives was the net result of the series of conferences.

⚜

In a statement issued late Saturday afternoon Governor Harding made it plain that there had been an increase of more than a billion dollars in credits in the past year, instead of the restriction charged in the general committee report. He denied explicitly that agricultural products were discriminated against, and in proof pointed out that the bulk of reserve loans were in agricultural territory. Secretary Houston said it was impossible to even consider treasury loans or a revolving fund. The treasury does not have the money and to get it would be compelled to go into the open market and borrow it at high interest rates. The war finance corporation was financed by tax raised funds turned over to it to make it possible to get American goods into foreign markets in the face of war risks, and there can be no possible argument for its rehabilitation now in peace time, he said. If interest rates and speculation have been manipulated to influence speculative prices, then there is a remedy and the president had already instructed the federal trade commission and the attorney general to make a rigid investigation.

This was as far as the conference got. It was a complete deadlock.

Two things should be pointed out in addition. Neither the American Farm Bureau Federation nor the National Grange joined in the call for this conference. The Farm Bureau Federation was not represented in any way, and the Grange only by the presence of its Washington representative who did not officially sign any committee report.

Whether or not this demonstration of the serious state of mind of some of the farmers, especially those hard hit by the cotton price situation, will have any further or later effect is still problematical. In the face of the official statements issued it is difficult to see what government action can or should be taken. The American Bankers' Association is in session here this week, and has announced that the agricultural situation is one of the three big items in this week's deliberations. Perhaps there is relief in sight from this source, if not from government action.

⚜

The action of the dairy interests at Chicago, in agreeing to "go after" the International Dairy Congress to come to the United States in 1922 attracts attention in Washington. B. H. Rawl, assistant chief of the Bureau of Animal Industry, C. W. Larson, acting chief of the Dairy Division of the Department of Agriculture, and A. M. Loomis, secretary of the National Dairy Union, are members of the tentative organization committee for this purpose, and Messrs. Rawl and Larson of the executive committee.

Brockton Fair Dairy Show

Of the nearly one-quarter million persons who patronized the Brockton Fair at Brockton, Massachusetts, October 5 to 8, it is safe to say that more than half spent a good portion of their time looking over the dairy show. Most of the remainder visited the cattle department. As in years past this important department of the greatest fair in the East specialized in four leading dairy breeds—Holsteins, Guernseys, Ayrshires, and Jerseys.

Because of the National Dairy Show opening at Chicago during Brockton Fair week, the Brockton Show lost several important herds, but most of the classes were well filled and in many there was the keenest kind of competition. Offering $6,000 in premium money besides numerous special prizes the Brockton Show always succeeds in filling its barns, and, not only were the dairy breeds well represented, but there was the largest number of entries in the swine classes the fair has ever had.

Junior stock judging and a 24-hour butter test, won by a Holstein, were dairy show features. Alma Korndyke Colantha 2d, Holstein, owned by W. P. Turner, Massachusetts, made 54.85 pounds of milk and 2.31 lbs. of fat. Second went to an Ayrshire, Henderson's Betty, owned by the Weymouth Farms, Massachusetts, which made 42.06 pounds of milk, 2.04 pounds of fat.

In all the four dairy breeds the various breeders' associations made attractive offers of special premiums, the Holstein-Friesian Association giving the most, adding 15 per cent in all classes, while the fair management gave herdsmen's prizes of $50, $25, and $15 for winning the most money in the various classes. There were also prizes of $50, $25, and $15 for Massachusetts exhibitors' herds. Robert E. Haeger of Illinois was the Holstein judge. Exhibitors were C. W. Walker, Harold J. Shaw, and C. E. Waterman & Sons, Mains; Pequitside Stock Farm of New Jersey; W. P. Turner, Varnum P. Curtis, A. E. Blanchard & Son, Henry Bartlet, and James Haggart, all of Massachusetts.

Holsteins

Pequitside Korndyke Sadie Vale, owned by Pequitside Stock Farm, New Jersey, was senior and grand champion Holstein bull, and Isabelle Nubian Colantha, owned by Henry Bartlett, was senior and grand champion cow, with a daughter which was junior champion. A son of Colantha Mercedes Fayne, winner in the junior calf class, was champion bull under two years, while Boon De Kol Mendon, owned by Pequitside Stock Farm, was champion cow under two years.

Competition was especially keen in the aged cow class, while herd classes also brought out many entries.

Guernseys

William K. Hepburn of Massachusetts was the Guernsey judge. Hurley received something of a surprise when his Imp. Cherry's Memento of Iowa, one time highest priced bull, was placed third, with Langwater Croesus, owned by Schlehuber, first. This latter animal was champion and grand champion, but Hurley had much consolation in seeing Memento's Successor, winner in the junior calf class, placed as champion bull under two years. The Oaks Farm Miss Spotswood of A. D. F. was champion and grand champion cow, while Hurley's Princess Bopeep was champion cow under two years. She was winner in the six to twelve months heifer class. The Oaks Farm won in all herd classes; also with progeny of one bull, while Hurley won with progeny of one cow.

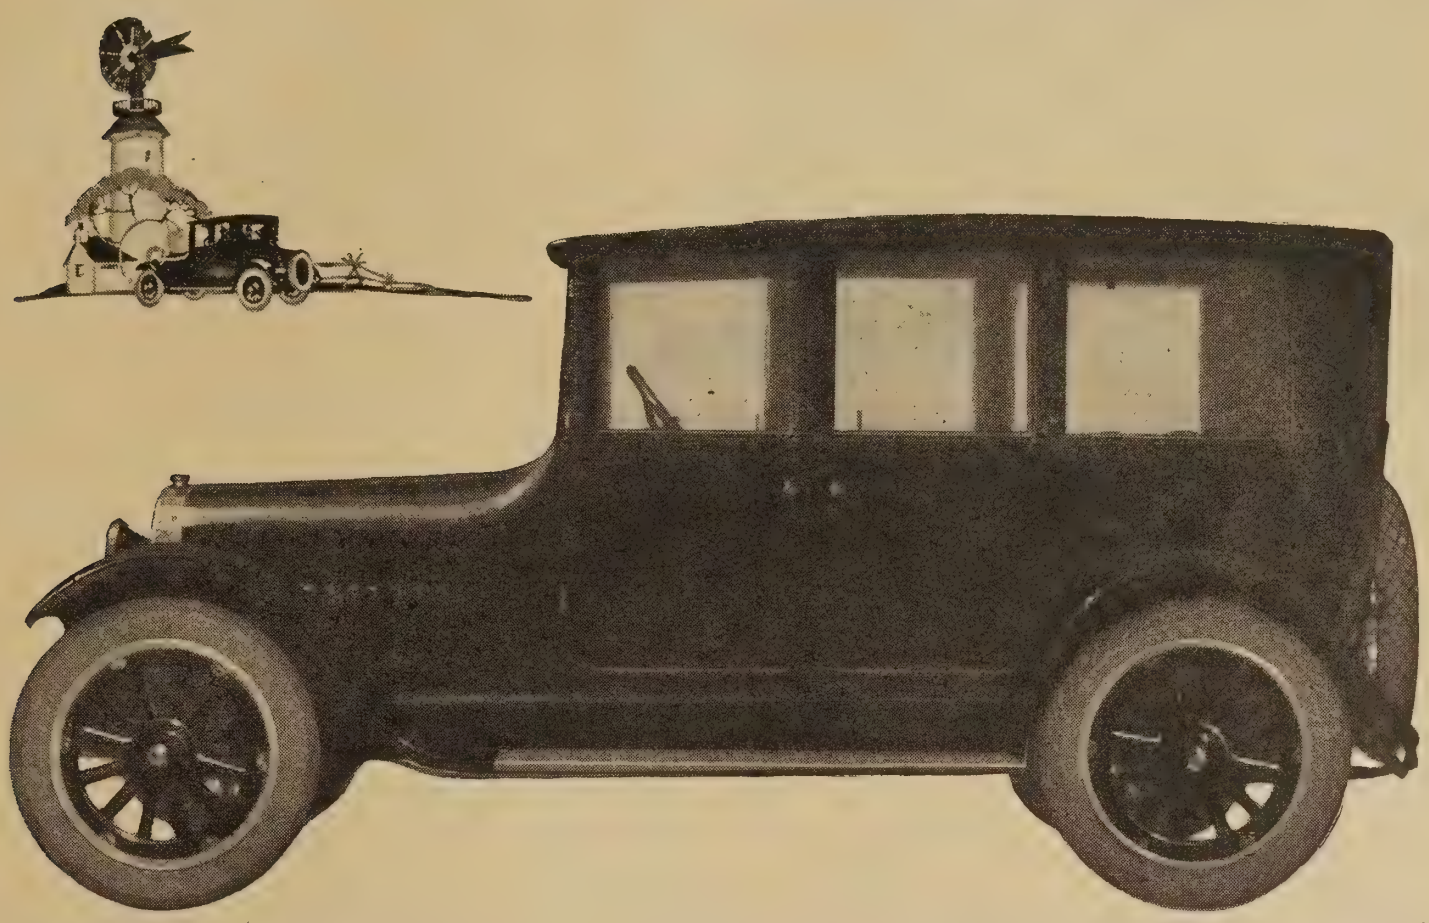
Ayrshires

Professor William M. Regan of New Jersey was the Ayrshire judge. This breed was represented by the Weymouth Farms, Gray Rock Farm, and George F. White of Massachusetts, while there were several other smaller exhibitors. The Ayrshires did not have large entries in some of the classes, but all the animals were of high standard.

Ryanogue Gynette Boy, owned by Weymouth Farms, was champion aged bull, but had to give away to Irene King of Weymouth, champion junior bull under two years, for the grand championship. Henderson's Betty, another Weymouth animal, was champion aged cow and grand champion, with the junior championship going to Cavalier's Sunflower, a heifer under 18 months, owned by White.

Jerseys

The Jersey classes would have been better with more entries, but there was the keenest kind of competition between the Prospect Farms of New Jersey and the Inderkill Farms of New York, only $3 being the difference in their prize money.



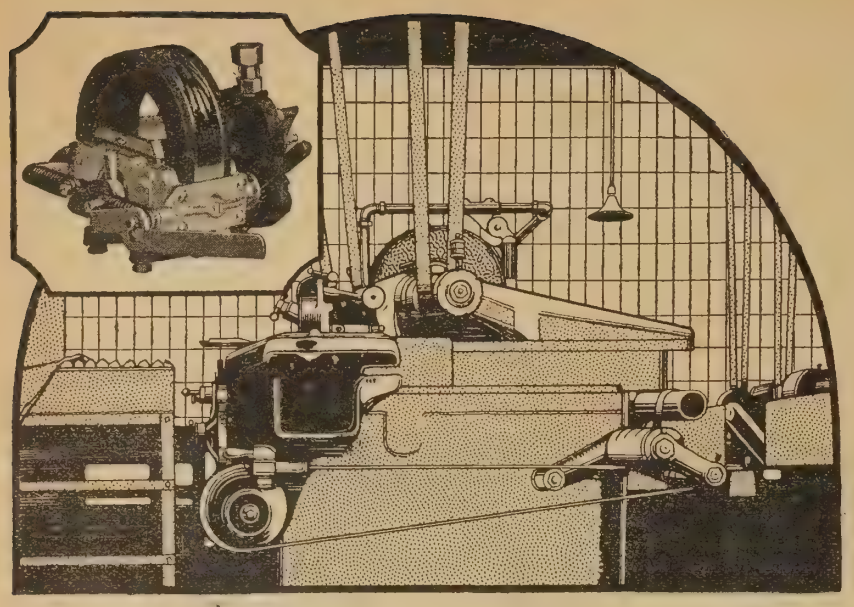
The judge, Fred Huyler of New Jersey, placed Gamboge Royal Majesty, the Inderkill aged bull, as champion and grand champion, the Prospect Farm's Prospect's Fairy Boy as junior champion bull; the Inderkill cow, Oxford Majesty Beauty 2d, as champion and grand champion cow, with the Prospect heifer, Fairy Glen's Cherita, as junior champion.

Everett M. Alger is superintendent of the dairy show, with Earl D. Upton and Herbert L. Tinkham other members of the committee.

New Jersey. E. M. ALGER.

Oakland

OAKLAND OWNERS REPORT RETURNS OF FROM
18 TO 25 MILES PER GALLON OF GASOLINE
AND FROM 8,000 TO 12,000 MILES ON TIRES



THIS NEW OAKLAND SENSIBLE SIX FOUR DOOR SEDAN IS POWERED WITH THE FAMOUS 44-HORSEPOWER, OVERHEAD-VALVE OAKLAND ENGINE

ALMOST the finest accomplishment of the Oakland Sensible Six Sedan is the character of service it has delivered the American farmer. Summer and winter, over good roads and bad, this capable and sightly car has afforded him and his family the utmost in efficient personal transportation. Today the high-power and light-weight principle of construction underlying Oakland's thrifty performance is embodied in an even stronger chassis of longer wheelbase. The comfort, the usefulness and the reliability of this competent model combine to a value not to be equaled in any other type of car.

OPEN CAR, $1395; ROADSTER, $1395; FOUR DOOR SEDAN, $2065; COUPE, $2065

One Organization And One Product

HERE at *Webster* we believe in specialization; in the quantity production of a single quality product. And toward this end our efforts are constantly directed, always on the alert for ways and means to make the *Webster* Magneto a better magneto; ***better in materials, better in construction, better in the service it is to render.***

So far our efforts have not been in vain. Today, over 600,000 *Webster* magnetos on as many engines are standing up, day-in and day-out, many under the most gruelling service, ***many under neglect and abuse.***

WEBSTER MAGNETO

manufacturers now supply the *Webster* as standard equipment.

And furthermore, progressive dealers all over the country realizing the sales value of the *Webster*, are insisting that the engines they sell must be equipped with this sturdy, dependable magneto.

And the recognition of *Webster* superiority and stamina by manufacturers of farm engines using make-and-break ignition, too, is a convincing fact. 85% of these

If your engine is not *Webster*-equipped, write us.

WEBSTER ELECTRIC COMPANY
RACINE WISCONSIN U.S.A.

MOLINE

has no rival in economy and long life. Burns kerosene, cheapest fuel, 36 hours one filling; handy valve controls heat for small tanks or mild weather; flame can't blow out; no ashes, smoke, sparks; heavy rust proof boiler iron insures steady heat; no rivets under water; dependable; lasts years; fits any tank; pays for itself quickly.

Tank Heater Literature FREE

Moline Hog Waterers
Guaranteed heavy galvanized steel; non-freezing; sanitary; cool in summer; long burning lamp, three styles. Write for prices.

Farmers who owned ordinary tank heaters are the men who buy and stick by the "MOLINE". Costs no more than the inefficient kind.

Get literature, Price Today! Immediate shipment, direct from factory. Write.

An Ice Crop Is No Frost

(Continued from page 647)

tion of heat will be further minimized. If a farmer erects a house of this type from old lumber and timber from the wood lot, the cost is not more than from $75 to $100. If the lumber is bought and the labor hired, the cost may be double this amount. Under ordinary circumstances, however, the benefits from the use of ice for a single season more than pay for the labor of putting it up and the cost of the storage house.

If possible, the exterior of an ice house should be made to harmonize with the other farm buildings. The selection of its site should be made with consideration of its convenience when the product is stored or removed. While the building need have no floor, it is important that it rest on a layer of gravel, cinders, or other coarse material, to facilitate drainage. The last layer of ice can be removed from a well drained house almost as easily as the first. Where there is not good drainage, it is almost impossible to dig out the bottom tier.

Preparations for the Harvest

Those who put up ice every year know that it is a good thing to get the sawdust, shavings, or other insulating material out of the ice house early in the fall before freezing weather sets in. Any unused ice should also be taken out unless there is one or more tiers.

During the autumn days when weather does not permit work in the field, the ice tools can be "touched up". If the saws, bar, and plow are given an edge with a file in advance of the time when they are called into use, the harvest is made easier. When skid slides, loading and unloading platforms, and ice racks are used, they, too, must also be looked over and repaired.

It does not take an elaborate equipment to make ice. A couple of regular ice saws, or cross cut saws with the handles removed from one end, some tongs, picks, a breaking bar, and perhaps a plow constitute the usual equipment.

Cost When Bought of "Growers"

About two-thirds of the work of getting the ice supply is entailed in growing and cutting the crop. On this account, whenever commercial dealers are harvesting ice on a large scale, it will pay to buy the supply from them. In 1919, farmers of Dane County, Wisconsin, living near the chain of lakes paid one dollar a load for ice cut in twenty-two-inch bales. This brought the cost of the ice up to forty or fifty cents a ton before adding the expense of hauling and storing. In communities around Lake Winnebago, a lake which probably supplies more farmers than does any other, the price paid per ton to those who grew the crop ranged from twenty to sixty cents.

The vast majority of farmers who wish to enjoy the pleasure and advantage of having a winter crop for summer use must cultivate and harvest their own supply. The term cultivate is used advisedly in this respect, for it is a fact that ice must be grown. Under favorable weather conditions and with the right care a good crop can be made in the course of three or four days. On the other hand, where no attention is given to the field, zero weather extending over several days may fail to produce good ice. The secret of success lies in keeping the field free from snow from the moment the water surface is glazed over until cutting begins. Knowing the average thickness that ice usually freezes in a given locality, it is a simple matter to calculate the size of a field necessary to meet the storage requirements. Below is given a table of ice field areas required to make a fifty-ton crop:

Size of Field Required to Make Fifty Tons of Ice of Varying Thickness

Thickness of ice	Size of field
6 inches	3,500 sq. ft.
10 inches	1,855 sq. ft.
14 inches	1,500 sq. ft.
18 inches	1,117 sq. ft.
22 inches	995 sq. ft.

A field somewhat larger than the estimated tonnage space should be laid off at the outset. This should be kept clean because a blanket of snow even a few inches in depth prevents freezing. In the case of small fields, the snow can be shoveled away before the ice is thick enough to support the weight of horse scrapers. In any case, the banks of snow should be kept far enough away from the edge of the field to permit storage room for snow which may fall later.

LOADS OF ICE FROM LAKE WINGRA, WISCONSIN, ENROUTE TO FARMS IN THE VICINITY

Where the winter permits, it is best to let the ice grow to a thickness of eight to twelve inches before harvesting. Although a house can be filled twice as quickly with ice a foot and a half thick than with stuff not over six inches, there is little advantage in storing ice over eighteen inches deep. On the other hand, along the southern boundary of the natural ice zone, where seldom greater thickness than four to eight inches is attained, farmers should be ready to gather the crop as soon as it is reasonably thick. Even farther north, ice is at its best and can usually be harvested to greatest advantage when it is first frozen rather than if the cutting is delayed with the idea of letting it get thicker. While there are some seasons when ice may be made in the northern states in March, the real ice making month is January. At

this time the ice is new and clean and less apt to be damaged by dirt and cinders imbedded during seasons of thaw.

Efficient Cutting and Loading

Where several farmers group together, ice harvesting can be handled in a most efficient manner. Even when this cannot be done, it is a good plan for neighbors to unite in the purchase of the more expensive harvesting tools, such as scrapers and plows. Ever since ice has been harvested in the United States, bales twenty-two inches square or twenty-two by forty-four inches have been the sizes ordinarily cut. The field can be marked by pushing an ice plow forward along lines at right angles to each other. Ice plows are equipped with a gauge which marks the next line, twenty-two inches away. By running the plow both ways of the field, a checker board effect can be marked off.

After the desired number of cakes have been blocked out, they may be cut down by running the plow a sufficient number of times in each groove. Plows are made to cut from two to twelve inches deep. The deeper the ice is plowed, the more easily it can be sawed out and the cakes detached from each other. Care must be taken, however, not to plow so deeply that the water from the fissures will seep to the surface. If this occurs, it is practically impossible to keep the plow marks from freezing shut. By packing dry snow at intervals in the plow marks with a paddle or tamp, damage from flooding or back water when the field is opened up can be largely forestalled.

The best way to open a field is to chisel a hole through the ice to permit the use of saws. The saws should be made to follow the plow or other marks which outline the cakes. If the initial blocks are to be used, they should be cut on a bevel by slanting the saw slightly toward the centers of the cakes. This permits sinking them below the main body of the ice so that they may be floated up on edge for removal. After a channel has been opened up, large rafts of ice may be detached from the main body by simply sawing the ends of a series of blocks and then with the aid of a breaking bar tapped in the mark along the plowed side, the whole raft can be detached. Whenever ice is split with a bar, it should be remembered that the crystal water has a grain. Gentle blows along the line where the division is desired followed by a series of heavier strikes produce square breaks, rather than ragged edges and ruined cakes. The rafts may be floated to the loading place and the individual squares broken off as desired.

Only a very small percentage of farmers have buildings so located that the ice can be skidded directly into the house. In the majority of cases, the product must be hauled by wagon or sled to the place of storage. There are a number of methods of loading ice. The crudest consists of simply pulling the cakes out of the water with tongs. Farmers in the vicinity of Wonewoc, Wis., make use of a lever device to great advantage in loading. Their method consists of lifting the ice from the water onto sleds by means of a pair of tongs attached to a long beam which operates, like the old fashioned well bucket, from a pivotal post. One man to attach the tongs to the ice and another at the end of the lever to lift the cake out of the water and onto the sleigh make a team that can load several tons a day.

The more common method of loading, however, is to put one end of a skid or water box, built of planks and ironed off, into the water with the other end chained to a wooden horse or cake of ice on a similar height as the conveyance used in hauling. With this equipment, the cakes of ice can either be pushed with picks from the water or one or more of them may be pulled by means of tongs, or a so-called jack, onto the loading platform or directly into the wagon or sled. When a jack is used it is attached to a rope hooked to the whiffle tree of the horse or team employed in loading. Unloading at the house may be accomplished with a block and tackle, using skids and horse power.

Storing the Ice

There is absolutely no use in putting up ice on the farm if it takes as long to dig it out of storage as it would to go to town for it. Nothing contributes more to the ease with which the ice may be removed in the summer than the manner in which it is stored. My experience in removing thousands of tons of ice from various kinds of storage houses leads me to believe that much that has been advised regarding the manner of filling ice houses is what may be called "bunk". It is not uncommon to find men who advise that, in order that the ice keeps well, the spaces between the cakes be filled with crushed ice or snow as the ice is packed. While this practice might tend to keep the ice, it makes its removal from storage most difficult.

For all round efficiency, ice of less than eighteen inches should be stored in the house "on the cant". This means that the cakes should be stood up on their narrow sides. By placing them so that joints are broken and fitting them close to each other, you can make the filled house almost a solid block. Each successive tier of ice should be laid with the long way of the cakes at right angles to the previous one so that they will bind each other and exert no pressure on the walls of the house. As the layers of ice are placed, sawdust, shavings, chaff, or straw should be packed between the ice and the walls of the building. When the last tier is placed, a layer of insulating material should be spread over the top.

While it requires care and extra labor to put up ice on the cant, it pays well in the end. Ice stored in this way, particularly that put up in weather so cold that the cakes do not freeze together, can be removed when needed with comparative ease. Except for the space close to the door, where slush generally accumulates, all that is necessary to break out the bales in summer is to saw the ends and tap them gently at the rear and below with a sharpened crowbar. Each time the ice is removed from storage, the insulating material should be carefully replaced.

Ice retails in the city at from one-fourth to one cent a pound. Considering its far more general utility in the country, especially on the dairy farm, I have no hesitancy in saying that there is not a farmer north of the Ohio and Missouri rivers who can afford to be without a supply. The economic importance of ice on the farm is very great. It enables the farmer to market such products as milk, cream, butter, eggs, and fruit when most convenient, eliminates the necessity of the housewife serving butter with a spoon, and makes possible the preparation of many delicacies.

Alfalfa Hay
The Choice Dairy Kind

We are now moving this Choice variety direct from the fields to the consumer—weights and quality guaranteed. We handle Alfalfa Meal and other Dairy Feeds. Write or wire us for prices.

Sir Pietertje Ormsby Mercedes 41st

The only son of Spring Brook Bess Burke.
"The greatest mother of the breed."

We Are Consigning One of His Best Sons to The Waukesha County Sale Nov. 22

Summit Bonny Pietertje Ormsby
Born May 9, 1920.

Sire—Sir Pietertje Ormsby Mercedes 41st. His first eight daughters average over 24 lbs. One has over 30 lbs. as a 4-year-old. Two others have made over 26 lbs. as 2-year-olds. He sired the Grand Champion Female at the 1920 Waterloo Dairy Congress. 41ST has more 1,000-lb. sisters than any other bull in the world.

Dam—Bonny Johanna Mooie De Kol has a 7-day record of 29.64 lbs. butter and 518.9 lbs. milk. 305 days, 694.42 lbs. butter and 18,124.8 lb. milk, one of our foundation females.

Two dams average, butter 32.22; milk 575.85.

Watch the succeeding issues for more information about the bull we are consigning.

New York Butter Market

NEW YORK CITY, OCT. 19:—The bottom of the butter market seems to have dropped completely except on strictly fancy grades. Buyers of high quality butter have advanced their standards far above their June and July requirements with the result that much of the butter that under ordinary conditions would sell as extras has to be classed in the grade of firsts. Two or three weeks ago, many receivers remitted for butter which they held but which was not sold and today they are meeting with large losses as much of that butter will not meet the requirements of the trade and either is not moving at all or is being sold at prices several cents lower than the price received by the shipper. Many who purchased Danish and Argentine butter are now finding much of that butter a drug on the market. Several of the larger houses which during the winter and early spring months made enormous profits in dealing in Danish butter are now finding those profits largely wiped out.

Ordinarily during the time of a slump in the butter market there are one or more possibilities which may cause a change in general conditions. However, there is nothing at present in sight to cause the least feeling of optimism. It seems that there must necessarily be a marked drop in butter prices before there will be any free movement of butter again. There continues to be a liberal make of butter in this country for the season. Argentine, Denmark, and New Zealand are becoming greater shippers of butter, and accumulations of butter in stores are growing all the time. In addition, the consumption of butter seems to be at the low mark at present. A report that New Zealand is contracting to deliver butter to this this country, delivery at any time during the next six months, at prices considerably below 40c is having a very disquieting effect among butter receivers. If the present stocks are not moved before that low priced butter is received there certainly will be a panic in the butter market.

Until today, in spite of the bearish tendency of the market, there had been no change in quotations on extras and higher scoring butter since last week Monday. Today, because of a limited demand for those grades, the price declined ½c. However, the prices of medium to low grade butter have declined continuously, with the result that the range of prices is the widest ever known. Today, the difference in price between a low second and an extra is fully 20c. As the prewar difference was seldom greater than five cents, it can be readily seen that the condition today is anything but healthful. It is reported that there are occasional sales of seconds at prices even lower than the established quotations. General conditions could not be worse.

The condition of the New York market is practically on a par with that of the other large markets. However, reports from Boston state that the market for undergrades in that city is even worse than is being experienced here. Centralized butter is in no demand. Consignments arrive with shippers stating a minimum price but invariably the offered price is several cents lower than the asking price. Large losses must materialize during the next few weeks. Established quotations today are: Extras (92 score), 58½@59c; higher scoring than extras (93 score or higher), 59½@60c; firsts, (90—91 score), 52@57c; firsts (88—89 score), 46@50c; and seconds (83—87 score), 40@44c.

W. B. LIVERANCE.

National Milk Producers Meet

The National Milk Producers' Association met in Chicago during the Dairy Show. It was a very satisfactory meeting to the representatives of this organization, for the work of the milk producers' associations gave opportunity to discuss what had been done. At early meetings of the association theories occupied the platform, but this year it was held by experiences. In the past five years many new milk producers' associations have been formed and all have taken advanced positions in serving their members. The farmer's side of producing milk has been brought before the consumer and this has been a decided benefit to the dairy industry.

The annual meetings of the representatives of the National Milk Producers' Federation are gradually unfolding the problem of selling market milk and bringing understanding of what course to pursue in order to provide ways and means of caring for so-called surplus milk. We shall in the near future publish liberal extracts of the papers delivered at this meeting and some of the discussions that followed. We present in the following a brief extract of President Milo D. Campbell's address:

A bird's-eye view of the business we represent presents five millions of farmers with 23,000,000 of cows furnishing one-fifth of the food of the nation. These cows supply 90,000,000,000 lbs. of milk each year. Forty-four per cent is used as fresh milk, 36% for butter, 4½% for cheese, 5% for condensed milk, 4% for ice cream, and the balance is absorbed by hogs, calves, and waste.

Farmers' Wives

The government has told us that from a recent survey it finds that 25% of the farmers' wives are working in the fields in addition to house work; that 36% of farm women are helping to milk the cows; that 96% of them do their own washing and sewing and that the average farm woman arises at five o'clock in the morning and works 11.3 hours per day through the year, and 13.1 hours per day during the summer months.

Bears and Bulls

Though meeting today in this great Bear Garden City of America, we need have no fears for personal safety, for the bears are all out on the farms at this season of the year, and the bulls are never loosed until the farmers' crops and other products are well in hand by the speculators.

Supply and Demand

The law of supply and demand is like the law of gravitation, it is always working, though at times obstructed in its operation, as it is today. The farmer is not unwilling to be governed by this law. Condensed milk in its various forms has mostly created one of the chief markets for the farmers' surplus milk. Within the last four years it has grown from less than two billion pounds of whole milk to more than four billion pounds.

Condensed Milk Prices

A glance at market quotations covering the last six months shows that from April 7th to October 6th, the prices at wholesale of condensed products have been as follows:

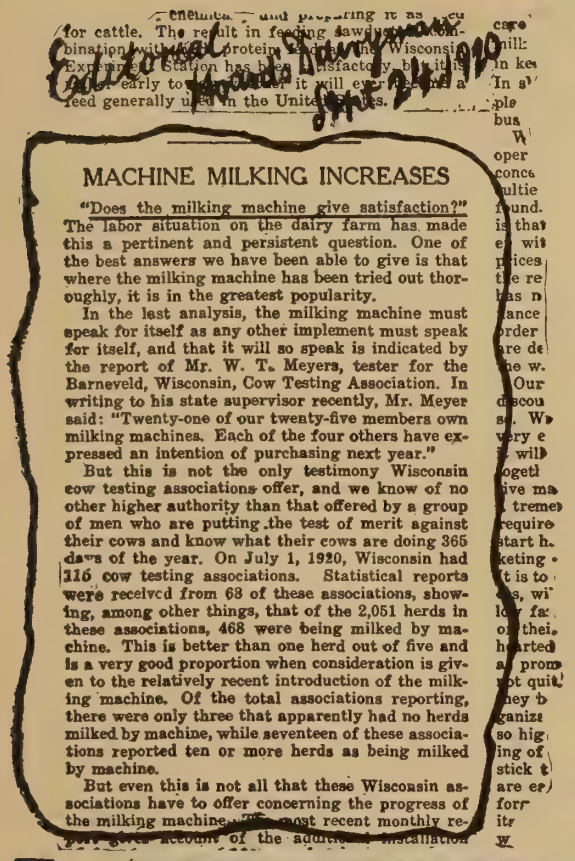
	April 7, 1920 per case	Oct. 6, 1920 per case
Eagle, Condensed	$11.00	$12,85
Leader, Condensed	8.00	10.65
Carnation, Tall, unsweetened	5.50	7.50
Carnation, Baby, unsweetened	5.00	6.85
Pet, Tall, unsweetened	5.50	6.95
Pet, Baby, unsweetened	3.75	4.60

Notwithstanding the surplus the condensers have on hand, the price they make to the public does not compare with the price they pay for the farmers' milk.

Seemingly, with perfect understanding among themselves, they hunt out the same old goat that has always borne the food losses, and announce that for the month of October the farmer must accept from fifty cents to a dollar per hundred less for milk than he received in September.

The average milk producer cannot change from selling whole milk to a condensery to a creamery over night. There may be no creamery near, no wagon gathering cream passing his door, he has no hogs or calves to consume his skimmilk, no separator and equipment for the buttermaking branch of the business, and like reasons prevent a change to cheesemaking.

Right now, for the month of October calling grain $55 a ton, hay $30, silage $7, roughage $7, and labor 40c per hour, it costs the farmer without a penny profit, $3.26 for every hundred pounds of milk produced. This estimate from experiments unquestioned is based upon cows averaging more than 6,000 pounds of milk per cow annually, a production at least 2,000 pounds above the average in the United States.



Foodstuffs imported in August were $210,000,000 as against $84,000,000 in August last year.

For the first eight months of the year foodstuffs imported were $1,366,000,000 as against $790,000,000 in the same period last year. Our imports of foodstuffs exceeded our exports.

for cattle. The result in feeding sawdust in combination with ... protein ... the Wisconsin Experiment Station has been satisfactory, but it is ... early to say whether it will ever be used as a feed generally ... in the United States.

MACHINE MILKING INCREASES

"Does the milking machine give satisfaction?" The labor situation on the dairy farm has made this a pertinent and persistent question. One of the best answers we have been able to give is that where the milking machine has been tried out thoroughly, it is in the greatest popularity.

In the last analysis, the milking machine must speak for itself as any other implement must speak for itself, and that it will so speak is indicated by the report of Mr. W. T. Meyers, tester for the Barneveld, Wisconsin, Cow Testing Association. In writing to his state supervisor recently, Mr. Meyer said: "Twenty-one of our twenty-five members own milking machines. Each of the four others have expressed an intention of purchasing next year."

But this is not the only testimony Wisconsin cow testing associations offer, and we know of no other higher authority than that offered by a group of men who are putting the test of merit against their cows and know what their cows are doing 365 days of the year. On July 1, 1920, Wisconsin had 116 cow testing associations. Statistical reports were received from 68 of these associations, showing, among other things, that of the 2,051 herds in these associations, 468 were being milked by machine. This is better than one herd out of five and is a very good proportion when consideration is given to the relatively recent introduction of the milking machine. Of the total associations reporting, there were only three that apparently had no herds milked by machine, while seventeen of these associations reported ten or more herds as being milked by machine.

But even this is not all that these Wisconsin associations have to offer concerning the progress of the milking machine. The most recent monthly re... gives account of the ... installation

THE Burrell Milker is a positive answer to the question, "Does the milking machine give satisfaction?" asked in the Hoard's Dairyman Editorial of September 24th, which is reproduced on the left. To the evidence given in this editorial can be added the endorsement of thousands of users of Burrell Milkers.

The Burrell Milker *does* give satisfaction.

The Burrell Positive Relief Pulsator alternately creates and relieves the suction in the tubes and teat cups, and draws the milk in the most natural way.

The Burrell Universal Teat Cup supports the teat by an air cushion, as a result of which almost every size of teat can be milked with the regular size teat cup.

The Burrell Automatic Controller is an exclusive feature of the Burrell Milker and has helped to earn for the Burrell the reputation that "*It Milks the Cows Clean.*" This feature alone is sufficient reason for choosing the Burrell Milker.

The Burrell Moisture Trap is essential to the production of clean milk with low bacterial count. It prevents the condensed vapors from running back and contaminating the milk in the pail.

Write today for booklet and complete information about the Burrell Milker. Tell us how many cows you have and why you are not already milking by machine. Use the coupon below.

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Broadening Out

[Continued]

"Well, I guess we're in for it," said Jimmy in disgust. "Here we are ten miles from nowhere and a storm about to break upon us that will probably flood us out of this c-o-o-p. I've been watching those clouds in the Northwest for the last half hour, and I'll bet the South all the niggers they've got there's some rain and wind in those clouds. Yes, and the thunder is getting closer."

"Thought you'd been watching something else besides the road," Bob commented, "at least that's the way it felt to your passenger. We've got plenty of time to make Huntsville before it rains," he added confidently.

"You don't know what you're talking about this time, Bob. You're only guessing, and I'll put up my guess that it's going to rain in less than half an hour from now against yours that it ain't; yes, and I'll cover it with the cost of the hotel accommodations for tonight, that is if we need any other rooms for the night other than this trap we're in. Remember what that big stiff said who put this trip into our heads, about how it rained in the South—just poured buckets, that's all."

"Are you through, old calamity howler?" inquired Bob, calmly. Just then there was a blinding flash of lightning, followed instantly by a clap of thunder.

"There, what'd I tell you! Yes, and it's starting to rain, besides," Jimmy broke in.

"Slack up a little, Jim," said Bob a little nervously. "Listen to that roar. There's wind coming. Better try to get the car close to the side of one of these cuts in the road. 'Twill help to keep us from blowing over. We can't go on until after the worst of it has passed and, besides, the road isn't any too good, either. Come on, stop her, Jim," he urged.

"You got us into this mess," replied Jimmy, hotly, "and it's up to me to see it through," he added, bending over the wheel, intent only on what he could see ahead. "And don't call this a road, either. There must be another Zion City around here somewhere. If we don't break a spring before we're through this, I'll be willing to forgive Hank Ford for all the other faults of his Lizzies. If you would have just listened to what they told us in Fayetteville about this road we wouldn't be here in this pickle," he again repeated. "It's all right to be positive about a thing, but when it grows into bullheadedness then I say it's time to call a halt," he concluded.

"That's what I'm trying to do, Jim, get you to halt," said Bob with all the good nature he could muster in view of what really appeared to be a bad situation. "Who's bullheaded right now?" he went on, as Jimmy turned on the juice to the already overworked Lizzie. Splash, splash, and bumpty bump, as she bounced from hole to hole through the torrents of rain now falling.

Jimmy brought her to a sudden stop, saying with a little more composure as he did so: "I guess we've gone as far as we can for awhile." And so the two sat in apparent comfort in the shelter of the faithful Lizzie.

"Well, we're quite some distance from home, old man," said Bob, trying to encourage Jimmy out of his unpleasant thoughts. "Wonder what the folks are all doing tonight."

"Same's they've been doing for the last twenty years, I suppose," grunted Jimmy. "Tonight's no different than any other night with them, so why ask such a foolish question?"

"We're getting into the heart of the South now," continued Bob.

"Well, if this is the heart, I don't want to see any of the rest of it," growled Jimmy in answer.

"Oh, that's not fair to these people, Jim. This is home to them."

"I guess they needn't worry about any one else stealing it from them," he answered. "I know I wouldn't take it as a gift if I had to live down here."

"Don't draw your conclusions, old boy, until we've seen more of it," cautioned Bob. "The scenery we passed through today was certainly beautiful. I saw more than one old mountain home in Tennessee that I'd like to own for a place to come to for a vacation."

BOB AND JIMMY FOUND THE BOYS IN THE SOUTH STUDYING COTTON AS THEY HAD STUDIED CORN IN THE COLLEGE CLASSES LAST YEAR

"You can't make a living on scenery," said Jimmy, cutting in on the conversation.

"Well, these people do," Bob answered, "and they seem to be mighty happy, too. There wasn't a fellow we met today, but what seemed happy and contented with what he was doing. Look how they all greeted us. I like to see people like that; it kind a makes one feel at home with them."

"People! Where did you see them today?" Jimmy again grunted. "For all I saw, we could've kept a machine gun hot all day without hitting one."

"There's none so blind as those who won't see," Bob commented, at the same time suggesting that they had better be moving on now that the storm had passed.

They reached Huntsville, Alabama, by ten-thirty and, after setting down the day's expenses, they tumbled into the white, clean sheets to forget the hard ride and to straighten out the kinks it had left in their bodies.

"We ought to reach Guntersville by noon," said Bob, as he studied the map next morning before starting.

"Not if the roads are like those we came over last night," commented Jimmy pessimistically.

"Well, let's hope that they will improve from now on," said Bob, as they sailed out of town on the stretch of concrete before them. "I'll drive all day today, Jim," he said. "It will give you an opportunity to either confirm your bad impression of the South or to think better of it."

"How could I think better of it?" he smiled back, pointing to a rack of bones with a cow hide stretched over them, standing in the doorway of a nigger cabin. "Would think that those pickaninnies would be afraid to stand near her. She looks hungry enough to eat most anything without regard for the color of it. Talk about a scrub mongrel, I'll bet she's got the blood of all cowdom running through her veins. Thought ours were bad enough before we got into full bloods, but she's got anything skinned of her kind that I've ever seen. Wouldn't she make a grand souvenir for some of our big northern breeders! Let's buy her and present her to the cow college as the missing link in the cow kingdom. These niggers are surely a funny lot. I don't see how they can be contented to live in such cussed ignorance."

"Oh, ho," came from Bob. "Here's the river and by the looks of things ahead, the road runs right along it for some distance. She's up and tearing, too. Look how high she is. Must have been raining here for some time. Guess the best of the soil down here in this country is carried away in the streams, judging from the color. Isn't it yellow, though, with sediment?" he emphasized. "This must be the Tennessee. Wonder where we cross her."

"This doesn't look so bad for a farming country," Jimmy volunteered, as he scanned the large expanses of cotton that skirted the river on either side. "But I'm getting sick of seeing cotton, cotton, and then more cotton."

"Yes, but you'd be a lot sicker if these people didn't raise the cotton of the country," answered Bob. "They're doing just what we in the North are doing—raising that which they are best fitted for."

Just then they were hailed by a voice in a wagon coming toward them. "Turn back, boys, you can't get across the old Tennessee this morning. She's on a tear again and the ferry isn't running because they can't land yeh; 'sbeen raining here for a month and that old river is rising at the rate of a foot every hour. Better go back to Huntsville and ask the Chamber of Commerce to route you out. Yeh won't find the roads any too good no matter which ones yeh take," he drawled.

"Well, this is another nice stunt," remarked Jimmy, his voice filled with disgust. "Two hours lost right here, and no telling when we will be able to get across. Why in the name of civilized people don't they put a bridge across the river somewhere. The idea of having to depend upon a ferry, and a one-horse affair at that, to get across that river."

"No use to shed tears about things that have to be," said Bob as he headed the car the other way.

They had ridden in silence for about half an hour, when Jimmy suddenly exclaimed: "Look, Bob, there's a kind of ferry over there with an auto and a horse and rig on it. They seem to be crossing all right in spite of the tearing of the old Tennessee. Hadn't we better inquire into this a little before going any further? It might save us miles and again it might be the means of a lot of trouble. I'm for finding out at least, aren't you, Bob?"

"Sure, we'll inquire," he answered, but I haven't much faith it is anything that will help us out of this trouble. Of course it's possible that it will be the very thing for us to do. Yes, it must be doing a regular business here," as he scanned the road leading down to the water's edge. "We'll stop and find out about it, anyway."

The old tug returned, carrying another auto with its passengers. "I'll just ask that fellow how the roads are across on that side," said Jimmy, "and if we can get to Guntersville by that way." The car had hardly landed from the tug, when Jimmy shouted to its driver: "How are the roads across that side? Can we get to Guntersville by going across here?" he added, all in the same breath.

"Well, now don't get too excited, young man. One question at a time, then maybe I kin answer yeh." So Jimmy repeated his first question.

"They're tol'ably rough and muddy, boy," he answered, "but I see you are driving a Henry, so I guess you kin make her if I did. But be sure to put on your chains; you'll need them."

"But is it possible for us to get to Guntersville by going across here?" Jimmy further inquired.

"Yep, I'd say so if you don't lose your nerve going up the one bad mountain you'll have to climb," he drawled, while a careless smile spread across his face. "It's tol'ably steep, boy, and she's surfaced with a layer of loose nigger heads 'bout the size of this," directing attention to his fists. "They'll do some rolling and scratching and cutting up of your tires and all them things that make you tourists swear and lose your religion, but, 'side from that, I think you'll make her. Yes, she's a bad one to even ask a Lizzie to climb. Good luck to you, boys," he waved as he steamed away, his Henry fairly puffing under the loads of red clay that her wheels were carrying.

Jimmy was game for taking a chance, saying as the car rolled onto the old tug: "It can't be much worse than some of the roads we have already been over." The boys proceeded to put on the chains whilst they were crossing, but found that the only way they could make them fit was to use wire to lengthen them. They had never been used before and evidently were a trifle too short. But, as they

left the ferry, they considered they had taken all the precaution that chains would afford. They soon found themselves axle deep in mud, but they reached the foot of the mountain without any accidents.

"Here we are," sighed Bob, as though he expected trouble from now on. He didn't have to wait long, either, for just ahead and in one of the narrowest parts of the road, they came upon a nigger with a balky team of mules hitched to a small load of stove wood. There they were, exactly crosswise in the road, refusing to budge under the hard lashes and cuss words of the driver.

"Can't blame 'em," whispered Jimmy. "They're plumb disgusted with life down here. They hain't got any strength to pull with."

"Haven't, not hain't," Bob corrected.

"Ah, cut that stuff," Jimmy blurted. "I'll talk the way I want to when I'm not in Skinner's English class and, besides, you're not getting on very fast, either." After a wait of about fifteen minutes, a mountaineer, driving a fine, healthy looking pair of hard tails, was compelled to stop on the opposite side of the balky team.

After sizing up the situation he exclaimed: "Hey, Jack, how much longer are you going to keep the road? Try coaxing them with a litle cawn," he added, as he spat a mouthful of tobacco juice upon the ground.

"Say, mistah," returned the nigger, "dem mules hain't seed no cawn for so long, they wouldn't know what 'tis," he grinned, while the perspiration streamed down his shiny black face.

"Guess you needn't tell us that," laughed the other, addressing Jimmy and Bob. "Well, you've got to get out of here, even if I have to pull you off the road myself," as he jumped from the wagon and started to unhitch his team. In less than five minutes he had pulled the balky team, wagon, and nigger and all out of the way and somewhat into the ditch.

"Wonder how that nig liked that?" commented Jimmy. "I thought that maybe he'd show some scrap."

"Well, I guess not," laughed Bob. "They know their place down here. The white people are good to them just as long as they stay where they belong; at least that's what I've been told and what we just saw bears that out pretty well, too, doesn't it? We kind a spoil them up in the North, more because we do not understand them than for any other reason, I suppose. But, maybe, if we had gone through what the South has with them, we'd know better."

"I don't call this half bad for a mountain road," said Jimmy as the car bounced from one rock to another. "It at least has a solid bottom, but it isn't any rougher than that Huntsville road, that's a cinch." He had no sooner finished with this last statement, than he spied what the mountaineer had described as the steep slope covered with nigger heads, in fact they had already commenced to ascend it.

"Looks pretty bad, Jim," said Bob, "and we've been running the motor in low so much this morning that she's mighty hot and there isn't the power we need to get up, I'm afraid. But we'll try her just the same, now that we're here. They crept about half way up, when it seemed to them that the motor was making its last death struggle. "I believe we're going to make her," said Bob.

"No, we won't," answered Jimmy. "She may make another yard, but that's all," and sure enough she stopped dead still about six feet farther on. "Too much for her, Bob, you might just as well give in right now. Everything's red hot."

"Oh, she'll make her all right," responded Bob, with his usual display of confidence. "We just didn't get a good enough start, that's all."

"Well, I'm not going to stay in the car," said Jimmy as he jumped to the ground and perched himself on a big boulder along side of the road. "Now you can do as you please," he added. "It's your car and you can abuse her that way if you want to."

Bob, himself, must have had his doubts, for any one with common sense and a little experience in driving might have known that it would be but a bare possibility that a car could ever get to the top on such a road. But he had lost his patience, partly because he found himself in this predicament and partly because Jimmy irritated him when he acted like this. "Come on, you big, red-headed stiff," he fairly shouted, "get in here. I'm going to make her," as he backed the car down toward the foot of the mountain.

But Jimmy was obstinate with disgust. "Big fool," he muttered to himself. "Half of his blamed confidence is nothing but ignorance. He's getting less practical every day," and he mopped his brow with the sleeve of his khaki shirt. "He won't get as far this time as he did the first," as he watched the car slowly creeping up again. "He hain't got the power he had then, and he knows it, too. But just bullheaded, that's all!"

As he had predicted, the car stopped within two rods of where he sat. "Now are you convinced?" he called as Bob began to turn off the radiator cap. "See what you've done," he yelled in anger, as the water spouted fountain-like from the radiator.

"Doesn't make any difference," Bob smiled back," at least to you, seeing that you have refused to ride further. And, besides, the only way we can get up to the top now is to wait for a team to come along and pull us up."

"Guess you'll probably remain right where you are for some time, then," Jimmy sulked. "I don't think any two teams of the mules I've seen down here so far could draw this car to the top."

"Doesn't make very much difference what you think," snapped Bob. "This car's going to the top of that mountain and before long, too, because I hear a wagon rattling along on these rocks."

Yes, he was right. Down the steepest of the slope came a pair of mules, not because they wanted to but because the wagon to which they were hitched pushed them along. Their driver was a typical mountaineer, tall, raw-boned, good hearted, and, from the looks of the outfit he drove, as poor as Job's turkey.

"Got her pretty well blocked, boys. How be I going to get by?"

"Not until you pull us out of the way," flashed Jimmy, now beginning to see the humor in the situation.

"Well, yeh hain't the first ones that these old babes of mine have pulled to the top," he drawled, as he rested a foot on the rump of one, preparatory to jumping to the ground. "Have a little moonshine, boys?" he asked, as he drew a flask from his hip. " 'Twill help a tol'able bit, I reckon," as he raised it to his lips.

Bob refused, as the flask was handed to him, but, as you may think, Jimmy did not decline, saying as he accepted it, "I always have wondered what the stuff was like and now is my opportunity to taste it."

"Don't take too much, Red," cautioned Bob, "so that you will be a nuisance on my hands for the rest of the day."

"That's right, Red," added the mountaineer familiarly. "There's kick enough in one swallah for yeh and, besides, that has got to last me until I get home again."

Jimmy grinned one of his roguish grins as he raised the flash, saying as he did so, "Bob, you ought to be an Irishman like the boss, here, and myself."

"Heah, yeh young rascal, don't drain the flash," said the owner, as the gurgling sound continued longer than he had expected.

"Pretty good stuff, if I'm any judge," replied Jimmy, the grin on his face broadening. "Would like dad to get a taste of that. He'd be happy for a week. Well, now, the next thing is to get this box to the top of this hill," he exclaimed with enthusiasm, at the same time catching the mules by the head and swinging them around to the front of the car.

"Reg'lar old hawd tail driver," laughed the boss, as he poked Bob in the ribs.

"Now, you get in, Bob, and start the motor. It will be a big lift for these old skins," Jimmy commanded. Up they started, leaving the astonished owner standing in his tracks, and they didn't stop 'til they had reached the top.

As Jimmy returned with the team, the boss remarked: "Yeh'd bettah stay in the South, boy. Yeh seem to fit exactly with them hawd tails."

"There isn't enough money in the South to keep me here, mister," he replied.

"Mebbe there's moonshine 'nough then," slyly chuckled the old man, to which Jimmy gave but a sheepish look.

"What do we owe you for your trouble, sir?" he inquired.

"Wall, I usu'lly git five bucks from people like yeh," he replied, "specially when they hail from the North, and Yanks at that," he added. "But yeh both seem to be good fellahs, so I'll only ask $2.00."

"Very good," commented Jimmy, as he drew forth the two dollars, "and we're mighty thankful for what you've done. And I want to thank you, also, for the little drink; not that I am fond of liquor at all. But I just wanted to be a good fellow with you, and to be a Roman when I am with them."

"Yere a brick, sonny, and I only wish yeh was my boy. Good-bye and God bless yeh," as he slapped Jimmy on the back and waved a farewell.

"Mighty good old scout," said Jimmy to Bob, as he reached the top all out of breath.

"He was that," returned Bob, "and we can consider ourselves lucky that we got away so soon. Are you sure you're sober, old top?"

And before he could add another word, Jimmy flashed back as he jumped into the driver's place: "Watch me drive this Fliv and then decide for yourself."

[To be continued]

Junior Letter

Hoard's Dairyman Juniors:—Well, I am still alive and well. I suppose you thought I had left for parts unknown because I did not write for such a long time. We have quite a few apples this season. We also raised 490 bus. of oats and 65 bus. of wheat. We have a large crop of hay on account of lot of new meadow. I planted a patch of Golden Bantam corn but we had cold nights almost all summer and the corn did not do so well, neither did the rest of the garden I planted, although it was pretty fair. I planted a hot-bed this spring but it did not grow enough to amount to anything. I then planted some squash in the same bed and they grew first rate.

I bought 5 pairs of pigeons, 1 pair pure white homers and 4 pairs of the blue homers. Two pair hatched once and that was all. I presume that will be the last until spring.

Everything is getting dry. A little more rain is needed for the pastures. I deliver milk to 125 houses daily. I leave home at 6 o'clock a. m. and get home about 2:30 p. m. I then get the cows, sometimes, and milk them. We have the milking machine going so it is not much to milk the cows. I then feed the horses and sleep a while and start over again. We get up about 4:45 a. m. Early enough, isn't it?

We got a new side delivery rake. It works splendidly on level land. The next thing will have to be a caterpillar tractor, then we will be jake.

Well, I will close for the present; will write again in the future.

Michigan. Ardell Zurcher.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

COUPON

HOARD'S DAIRYMAN Juniors,
Fort Atkinson, Wisconsin.

I want to join your Juniors Club. My father's name is _____.

I am _____ years old and like _____ (name breed) cows best. Send me the watch fob, button, and creed and enroll me as a member.

STOCK FOR SALE

For Sale—200 head high grade Holstein cows and heifers and 6 registered bulls, consisting of 4 entire herds. Must sell at once. Also calves from 4 to 6 weeks old. Write or call. ALBERT M. HANSON, Whitewater, Wis. 23*

Registered Holstein females, open heifers, bred heifers and nearby springers that have quality. Bred to good sires. Do not write but come and investigate. C. S. MULKS & SON, Whitewater, Wis. 1*

High grade Holstein cows due to freshen in September and October. Pure-bred bulls serviceable age. JOHN GATES, Fort Atkinson, Wis. 3*

If you are in need of pure-bred Holsteins of any age or grade Holsteins it would pay you to see me as I have from 1 to 3 carloads on hand all the time. If I do not have what you want, I will help you find them as I know where to go. R. D. LEE, Cazenovia, N. Y. 3*

Holstein heifer and bull calves. Pure-bred, registered and high grade. Splendid individuals and breedings. Delivered to you, $25 and up. Your inquiry will be given our best attention. BROWNCROFT FARMS, McGraw, N. Y. 5*

I have usually 100 head of registered and high grade Holsteins on hand for sale. Also registered and imported Percheron and Belgian horses. RALPH HUDSON, Milton Junction, Wis. 12*

For Sale—At Elmwood Stock Farm, high grade Holstein cows and young stock by the carload. JOHN MURPHY, Mukwonago, Wis. 3*

"The Willows" offers fifty high grade Holstein cows for sale. S. D. SHAMBEAU, Waupaca, Wis. 12*

Registered Holstein young bulls; farm prices. Sire's three nearest dams average 28.68 lbs., 4.51 fat. FRANK CLOVER, Loomont, Montana. 3*

High Grade Holstein heifer calves, two to four weeks old, from tuberculin tested herds, $30 each, crated. Will ship C. O. D. WAUKESHA CO. HOLSTEIN-FRIESIAN BREEDERS' ASSOCIATION, Waukesha, Wis. 9*

High Grade Holstein and Guernsey heifer calves, 3 to 5 weeks old, from record sires, $25 each crated, C. O. D. Also springer cows, heifers in carloads. Pure-bred bulls. W. J. PETERS, West Chicago, Ill. 22*

High Grade Holstein and Guernsey calves. $25 crated. Safe delivery guaranteed. BROWN & COLLINS, Lima Center, Wis. 16*

125 extra good springing high grade Holstein cows and heifers for sale. ENSIGN & DERBY, Cameron, Missouri. 19*

High grade Holsteins. Can spare one car load. H. A. KUHTZ, Waukesha, Wis. 7*

For Sale—Ten very choice high grade Holstein heavy springing cows and a few choice 1 and 2-year-old heifers. These cattle are mostly bred to and sired by my 31-lb. bull. C. S. SIMMONS, Belmont, Wisconsin. 8*

Serviceable grandsons of Lola Segis Pontiac Homestead for sale, he a 34-lb., 1,000-lb. son of Piebe Laura Ollie Homestead King. Their dams are daughters of Joe Oak De Kol Fobes. Well grown, good individuals. Your choice, $150. R. W. MEAD, Stillwater, Minnesota. 10*

High Grade Holstein calves 6 to 8 weeks old, $30.00 each. We pay express and ship C. O. D. SPREADING OAK FARM, Whitewater, Wis. 11-tf.

For Sale—30 choice, high grade, Holstein cows, springing and fresh. Also 6 well marked heifer calves, $30.00 each, express paid to your station. CRAWFORD STOCK FARM, Mukwonago, Wis. 13*

For Sale—Carload choice bred and heavy springing Holstein heifers, mostly sired by 31-pound bull. CHARLIE DEARTH, Mineral Point, Wis. 13-4

Seven young registered Holstein cows, 2 just fresh, 5 due soon. Also 9 yearlings. All choice individuals. Herd on accredited list. Liberty Bonds taken. O. E. MULLEN, Watertown, Wisconsin. 13-3

Don't pay for my calves until you see them. Beautifully marked, high grade Holstein heifer calves, $25. Registered bull calves, $40. I ship C. O. D. and guarantee safe delivery and satisfaction. J. M. McFARLAND, Watertown, Wisconsin. 14-2

Registered Holstein heifers for sale. Priced for quick sale. E. A. FOTH, Sparta, Wisconsin. 14-3

100 head high grade Holstein cows and heifers to freshen in November and December. Must sell at once. Prices right. ADAM DUERST, Monticello, Wisconsin.

I want a first-class, up-to-date dairyman and farmer to rent my good Holstein dairy farm on shares. SAM B. WOODS, Crown Point, Ind.

Wanted—On farm, chore man who has had some experience with poultry and truck gardening. All modern conveniences. Near Chicago and only one mile from R. R. station. Address BOX 425, care Hoard's Dairyman.

Wanted—Farm superintendent and manager who has had both field and live stock experience and who is also capable of superintending modest estate near Chicago. Address BOX 424, care Hoard's Dairyman.

Wanted—Reliable, married man, who is a good dry hand milker for year 1921 to milk and work in dairy room. I use Sharples milking machines. Give references and state wages wanted in first letter. J. CLIFFORD MILLER, Brandy Sta., Va. 15-2

Two efficient dry hand milkers for work in up-to-date cow barn where milk is produced under certified conditions. $65 per month and board to start with, a guaranteed increase as willingness and ability is proven. Address with particulars, DOSORIS PARK, Glen Cove, N. Y. 15-2

Wanted—Single man for work on general farm with dairy. Good proposition to right party. CLAYTON C. HARRISON, Ringwood, Illinois.

Wanted—Married man as assistant herdsman, to work with pure-bred Holstein cattle, one who can make A. R. O. records or who likes cows and can work into it. House to live in will be furnished and reasonable wages will be paid to a man who is willing to earn it. Address GEORGE J. SCHUSTER, 300 Broadway, Milwaukee, Wisconsin.

Wanted—Herdsman, single, to take charge of milking herd of 30 Holsteins. Must be clean, steady and reliable. Steady job to right man. State wages and reference in first letter. FRED BARNES, Box 282, Iowa City, Iowa.

Wanted at once—Single herdsman for Guernseys doing A. R. work. Must be good caretaker and calf raiser. Cigarette smokers need not apply. O. K. SPIRES, Burlington, N. Dak. 15-2

POSITIONS WANTED

Farm manager with energy, push and proven ability, desires position on large, modern farm where results will be appreciated. Experienced in Advanced Registry, pure-bred stock, modern farming and in everything pertaining to the successful management of an up-to-date farm. Married, no family. Excellent references. Address BOX 333, care Hoard's Dairyman. 9*

Waned at once—Position as manager of up-to-date dairy herd, Holsteins preferred. Single, 25 years old, plenty of experience, graduate agricultural college, strong, ambitious, plenty of initiative and a good hard willing worker. Highly recommended. Address BOX 412, care Hoard's Dairyman. 14-2

Wanted—Position as manager or herdsman on large dairy farm. Experienced in general farming. A. R. work, stock raising, tractors, etc. Married, Scotch. References. Address JAMES JOHNSTONE, Route 3, Redford, Michigan. 14-3

Wanted at once—Position in dairy on a large stock farm by single man, twenty-five years of age. Can assume herdsman's or manager's responsibilities when necessary. Wish to co-operate with owner to build a fine herd. No tobacco. Able to do common veterinary work. Good milker, feeder and calf raiser. Salary, $125.00 per month with advancement when ability is assured. If interested write BOX 416, care Hoard's Dairyman. 14-2

Leadsman and Fitter—Consignment and dispersal sales a specialty. Save time and money by employing an experienced man to fit and show your sale cattle. References. JACK ROBINSON, care Ohio Holstein Asssociation, Tiffin, Ohio. 14-3

Wanted—Position as herdsman. Age 35, experienced in A. R. O. work and running milking machines. State wages first letter. Address BOX 428, care Hoard's Dairyman.

Herdsman wishes position immediately. Married, small family, 30 years old. One of the best showman on circuit. Can get results from help. References from best herds. Address BOX 427, care Hoard's Dairyman.

Farm manager, with proven ability, desires position on large, modern farm, where faithful, conscientious work will be appreciated. Experienced in Advanced Registry, stock of all kinds, farm machinery, modern building, gas and steam engines. Married, 3 children. Best of reference. Address BOX 421, care Hoard's Dairyman. 15-2

Girl wishes position as dairy maid. Sanitary and experienced. Address BOX 430, care Hoard's Dairyman.

POSITIONS WANTED

Wanted—By refined, educated, American business woman, position as housekeeper and office assistant; preferably dairy or stock farm. Address BOX 423, care Hoard's Dairyman. 15-2

First-class herdsman with 15 years experience in feeding and calf raising wishes position November 1st. Good buttermaker. Salary $75.00 to $100.00 per month. ALFRED LINNIG, Laporte, Minn.

Wanted—Position as a working manager on dairy farm by a young married man, small family. Special dairy course training. Eight years experience, including Cow Testing Association work, etc. Good executive. Pure-bred stock preferred. Salary according to size of proposition. The past two years have been farming for myself. Am selling out. Will be open for engagement about December 15, 1920. Address BOX 426, care Hoard's Dairyman.

Single experienced farm hand, Canadian, age 23, desires position as regular barn man. Address, stating wages, to BOX 433, care Hoard's Dairyman.

Wanted—Modern dairy farm to operate by young married man. Life experienced and university training. Pure-bred Holsteins preferred or would consider position as herdsman. Address BOX 431, care Hoard's Dairyman.

Wanted, January 1, 1920, position as herdsman. Married, expert milker and feeder of test cows. First class reference. G. O. TURNER, Grandview, Mo.

Wanted—Position as herdsman on modern up-to-date farm. Pure-bred stock. A. R. O. work. I am single, 35 years of age. State wages paid in first letter. Address HERDSMAN, BUENA VISTA PARK FARM, Glenwood City, Wisconsin.

Married man, aged 28, desires position as manager or herdsman of Holstein breeding establishment. Would like place where my ability to build up a herd may be shown. Am thoroughly familiar with all lines of breeding; experienced in both official and semi-official work. An expert in the show ring. Best of references. Address BOX 434, care Hoard's Dairyman. 15-2

Working manager of 200-acre grain and stock farm wants to connect with larger farm proposition. Ten years' experience, four years with present proposition. Agricultural graduate, age 34, active, on the job, responsible; familiar with farm operations, can get the work done on time, understand farm machinery, tractors, gas engines, trucks. Want share proposition. Have best of references. Will locate anywhere; prefer vicinity of Baltimore, Md. Address BOX 435, care Hoard's Dairyman.

Get Our Prices on STAR Carriers

Now Is the Time To Get Yours

Don't wait for cold weather to make you wish you had one. Think of the time and hard, disagreeable work that a new STAR litter carrier can save you in your barn this winter. A good litter carrier is a good investment in any barn, but in STAR Carriers you get big features which no other carrier made can offer. For example, STAR Carriers give you the advantages of having litter carrier tub and feed carrier body interchangeable on the same truck. Two carriers in one—at a saving in cost and double value in service.

Quick lowering, easy raising, automatic tripping and the dependable long-lasting construction are some of the other features you will like in STAR Carriers. Here are carriers built to last and to be "on the job," ready for service every day, year after year.

No matter what other equipment you may now have in your barn you can get STAR Carriers and track to fit your needs. No barn arrangement is so complicated that STAR Carriers cannot serve the owner successfully.

STAR Carriers are built by barn equipment specialists. Built in a variety of types—for steel track, and combination steel track inside and rod track outside. You can also get STAR Swinging Booms —outside pillars, STAR feed trucks, Stalls, Stanchions, Water Bowls, Door Hangers, Hay Tools and many other STAR Articles for your barn in the STAR line.

Write for the STAR Line Book

This is our barn book and catalog. Every farmer should have a copy. Find out how little it costs now to equip your barn with STAR goods. If you are thinking of building a new barn or remodeling your present one, let us suggest STAR plans. You will find many good barn plan suggestions in our catalog. Let us send you a copy free.

But don't wait until you build or remodel before using STAR Carriers. Get your Carriers now. Send coupon today for special catalog on carriers.

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Endometritis

This term, endometritis, which is used so much nowadays by qualified veterinarians in reference to the abortion disease, means inflammation of the endometrium or mucous membrane lining the uterus or womb. It usually is catarrhal in that there is an abnormal discharge or exudation from the inflamed membrane. This discharge may be scant or profuse, but is readily recognized by the expert. Endometritis is the most common cause of barrenness or sterility. The latter term is, perhaps, best applied to the impotent condition of the bull and the former to unfruitfulness of the cow. The cause is infection by germs resulting from difficult calving, laceration of the womb by instruments, or by the finger nails of a person who has not carefully cleansed and disinfected his hands. In such cases severe or acute infection (septic metritis) is the result and endometritis remains as a secondary or less active or acute condition. It may also result from infection of a less acute character occurring at the time of calving, or afterward.

The cow afflicted with endometritis usually fails to conceive when bred, although her periods of heat are regular. The vaginal discharge may be increased and unnatural in appearance. To determine the matter the trained veterinarian brings the mouth of the womb (os uteri) into sight by use of special forceps and examines it carefully. The healthy os is dry and pink in color, as is the womb, unless the cow happens to be in heat. The color is deeper in chronic endometritis and in the catarrhal condition there will be an increased secretion of mucous. This may show a turgid or sticky consistency and possibly pus admixture, but only a specially trained and experienced veterinarian can decide whether the secretion is normal or abnormal, or the degree of abnormality present which indicates slight or severe infection. It may be that the os and its secretions appear practically normal, but when examination of the womb and ovaries assure the veterinarian that pregnancy does not exist he proceeds to open the mouth of the womb and neck (cervix) and purulent discharge may then flow from the catheter used for the purpose. Large quantities of pus are not seen in true cases of chronic catarrhal endometritis.

Having determined the nature of the disease present the veterinarian treats it by irrigating (douching) the womb with a mild antiseptic solution and swabbing the canal of the neck of the womb with a strong solution. The flushing out of the womb is done by means of special return-flow catheters of the Albrechtsen type. It is continued until the liquid comes away clear and is repeated at intervals of a week or so until the womb is pronounced healthy by the operator. Periods of heat usually come on regularly after the treatment and the cow will be likely to conceive when bred, unless the tissue of the membranes has been greatly changed by disease. The greatest possible care has to be taken not to spread the disease from one cow to another when such treatment is given. All instruments therefore have to be perfectly sterilized each time. Only a trained expect should do or attempt to do such work.

"First Aid" for Cows

EVERY farmer, dairyman and stockman knows that prompt treatment saves loss. With a Pilling "Easy-to-Use" Cattle Case, you can give an animal immediate relief from milk fever, bloat, etc. Pilling Cattle Case No. 2, shown here, contains high-grade "Easy-to-Use" instruments of the latest approved designs. Purchased separately, they would cost $18.00. But we ship complete set, in oak case, with "Easy-to-Use" directions, only $12.50, postpaid. Order today. Booklet free.

Twin Bulls

We have a pair of twin bulls from a very valuable cow and sire. Is it advisable to raise twins for breeding purposes? I have been told twins should not be safe breeders.

Stoughton, Wis. B. J. L.

Twin bulls are fertile; but when a bull and a heifer are born as twins, the heifer usually is barren and is termed a "free martin". The bull of such twins also is fertile.

Red Milk

Our cow has been giving milk of pinkish, sometimes red, color for three weeks. Please tell us what causes this and what we can do to correct this condition.

Jonesboro, Ark. E. S. H.

A germ known as bacillus prodigiosus sometimes turns milk pink or red after it has been set for some time in infected vessels. Set a sample of milk from each quarter of the udder in a separate sterilized vessel to determine if any quarter is giving abnormal milk.

Mammitis (garget) in the chronic form sometimes causes blood in milk and there is no remedy. More often blood in milk in clots or coming freely is due to congestion of the udder before or at calving time, causing rupture of tiny blood vessels in the glands; this soon subsides. In other instances, growths in one teat, or more blood at milking time. Such growths may be removed by operation when close to the opening of the teat; but when high up it usually is best to let a calf nurse or dry off the milk secretion. Make a careful examination and investigation to determine the cause of the discoloration of the milk. Meanwhile more carefully cleanse, scald, and sun dry the milk utensils.

Indigestion

I have a calf that gnaws on boards and chews on everything it gets hold of. This calf has been troubled with scours. Have been giving lime water and lime phosphate but no change. What's the best to do?

Have a cow due to freshen about the 20th of next month. This cow's bag is hardening. Last year when she freshened her bag was all in one hard lump.

What is the best treatment for pneumonia? Should an animal have anything to eat while down with pneumonia?

Glyndon, Minn. P. N.

Indigestion is the cause of depraved appetite and a calf such as you describe will not likely be worth while raising. It may do better if you give it a dose of castor oil in milk and then let it have free access to oats, bran, and oil meal, in addition to fine hay, and milk fed twice daily blood warm and containing an ounce of limewater to the pint. Cleanse, scald, and sun dry all milk vessels. Keep the calf in a large, clean, well lighted box stall. If possible, put in a big lump of chalk for the calf to lick.

Congestion of the udder is usual before and at time of calving. It usually passes off soon after the birth of the calf. It may be lessened by opening the bowels, feeding light, laxative rations and making the cow take active exercise daily for three or four weeks before calving, during which time she should be "dried off". The udder also may be massaged twice daily and a little melted lard rubbed in at night. If excessively congested a little serum of milk may be stripped away once or twice daily.

Symptoms of pneumonia have to be treated by the veterinarian as they appear. Appetite should be encouraged and the animal allowed to eat light, laxative feed. If you care to give full particulars, we shall be glad to give advice.

Corn in the Dough

HOARD'S DAIRYMAN:—What a fine year this will be to prove the value of Farm Bureau Corn Variety Test results! Tests have been carried on in the agricultural counties of New York State for five years or longer. These tests have shown appreciative farmers the futility of planting late maturing varieties of corn for silage. Time was when all farmers thought that the greater the growth of corn the better, regardless of the factor of maturity. Many farmers are still gamblers enough to run chances on a variety that may possibly get ears that will show kernels during an average growing season but will produce fairly well matured ears once in a memory. Such varieties have no place on the farm of a real dairy farmer.

A cold spring with little moisture gave corn a slow start. Cool evenings later further prevented rapid growth, until early in September when men got corn harvesters in shape to work did they find comparatively few fields with corn advanced to a really semi-matured growth. We will miss our good silage such as we had last year when we try to make profitable milk this winter. To be sure we could not foretell what kind of a growing season we would get this year; we did not need to. Why should we guess at the seasons? Why should we guess at getting a corn crop? Guess factors are numerous enough in our best farm practice without courting unnecessary ones.

Our state college has advised against southern grown varieties and varieties grown in climates unlike our own. Farmers support their agricultural colleges, experiment stations, and farm bureau associations and yet many there are who will choose to believe a clever talking corn seed agent rather than one of their own thoroughly reliable experimenting agencies. May 15 to Sept. 15 is perhaps the maximum growing season in the central or Mohawk Valley section of New York State. Practically the only sure varieties for this length of time on best corn soils are Sweepstakes, Luces Favorite, Cornell Number 12, and a sure-fact, Improved Early Leaming. Most of our silage corn is put in after May 15; much in early June. For these later dates we have some excellent varieties. Luces Favorite will usually make excellent silage in this length of time. We are sure of Cornell 11, Early Huron, Bailey Dent, Webbers Early Dent, and Bloody Butcher. In fact these varieties will do to husk in many seasons. It is our conviction that we get best results and most food value from a crop of corn that reaches a stiff dough to a fair glazed condition for ensiling. We do not object to having the dent show in dent corns. We do not want a thoroughly matured corn because much will pass through the cow and, too, we would not get the use of the full growing season.

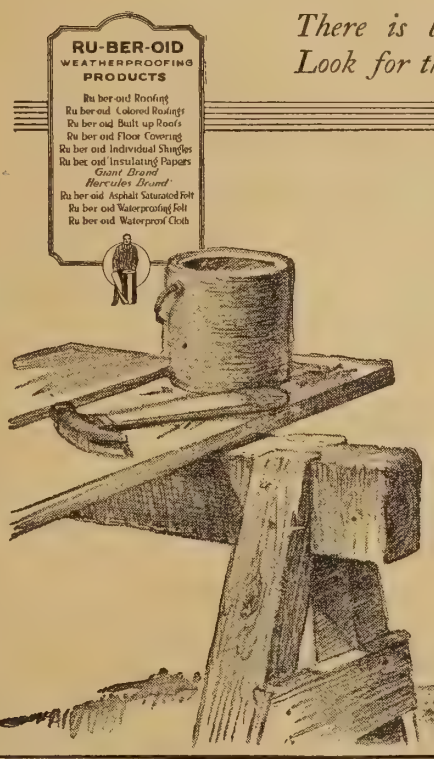
Most of us plant our silage corn too thickly. Many of us do not give the corn a chance to produce ears, much less to grow them to near-maturity. Too often, too, we neglect to cultivate the corn enough. We used to produce a lot of husked corn in this state but we have lessened our production in direct proportion to the diminished work and attention we give our corn fields. We have noticed the best fields of silage corn this year where farmers were far sighted enough to put their silage corn in check rows so that they could horse work their corn. Cultivating both ways insures a good crop of corn providing a proper selection of variety has been made.

Best results with corn come from planting on a good alfalfa sod with an application of a couple of hundred pounds of 16% acid phosphate per acre. A good clover sod is next in value. A heavy timothy sod top-dressed with manure for the last cutting of hay together with the indispensable acid phosphate also insures good production.

Look over your field and that of your neighbor's and see if what we have noted is not true. Also note the good results men have this year where and when they have added some sunflower seed to their corn.

New York. W. J. HAGAR.

The Label Tells the Story



The sight of a Ru-ber-oid Label where a roof is being laid is conclusive evidence that the owner knows what's best and will be satisfied with nothing less.

For over twenty-five years Ru-ber-oid has been regarded as the standard by which ready roofings may be judged. The enviable position it occupies was won and has been held through sheer merit.

On many a farm roof Ru-ber-oid has been in service a score of years or more—with the limit of its endurance yet to be determined.

When you buy ready roofing remember that the name Ru-ber-oid stands for dependability and Ru-ber-oid will be your choice.

There is but one Ru-ber-oid
Look for the Man on the Label

Ohio Jersey Quartet Averages 732 Lbs. Fat

Three cows in the herd of H. W. Bonnell, Cranberry Run Farm, Ohio, have recently completed very creditable Register of Merit tests. This farm is the home of many high producers including the former state champion, Fox's Queen of Minerva, with 14,403 lbs. milk, 823 lbs. fat, and Sophie's Dolly Dimple, the present junior two-year-old champion with a record of 10,814 lbs. milk, 689 lbs. fat.

Snip Wauger 2d has produced 14,876.5 lbs. milk, 823.27 lbs. fat. She was started on test at the age of ten years and nine months. This is the highest record in Ohio for cows beginning test at ten years of age.

The third cow, Financial Raleigh's Foxy, becomes the senior three-year-old champion of Ohio. She was started on test at three years and seven months of age, and produced 12,115.8 lbs. milk, 667.25 lbs. fat.

Gold Butter Beauty 296476, owned by L. J. Taber, completes the quartet. Her production for the year was 13,491.3 lbs. milk, 715 lbs. fat, age seven years and seven months at start of test. Butter Beauty is the dam of the present yearling champion of Ohio, Beauty's Gold Medal, who finished test eight months ago with 10,585.5 lbs. milk, 552.86 lbs. fat.—American Jersey Cattle Club.

Fall-sown grain crops in the South provide a winter cover for the land, thus preventing washing and leaching. They also provide winter pasture and grain and forage for work stock and may be grown to advantage in rotation with corn and cotton. The oat crop is one of the best for fall sowing where it withstands the winter.

Readers are leaders.

Play the Game

(Continued from page 657)

N. Y., a prosperous city in loyal League territory, came out with a leading editorial October 14 entitled, "Solving the Milk Problem by Co-operation". I would like to quote it intact here as further evidence that not all canny city men see the difficulties and dangers in our pooling plan which are so strangely apparent to those destined to be hardest hit—the milk buyers themselves. Here is the editorial: "Judging from full-page advertisements appearing in many newspapers, it would appear that the co-operative plans of the Dairymen's League which numbers among its members some 85,000 farmers in New York and adjoining states are not meeting with the approval of at least one of the largest manufacturers of milk products in the world. One-half of the advertisement consists of a letter written to the manufacturer by a gentleman who describes himself as a citizen, a tax payer, and the father of growing children, and who wishes to know what the manufacturer is going to do to defend the state of New York from the most deadly milk peril by which it has yet been menaced. The other half is the reply to the letter.

"Assuming that the letter was written in good faith with no other motive than to assure an adequate supply of milk for his growing children, it is difficult to see wherein the 'peril' of which the writer complains, exists. There appears to be plenty of milk for all. In fact, the closing down of milk plants by manufacturers for the reason given by them, that they are overstocked, would lead one to suppose that there is more than a sufficient supply. Surely the peril cannot exist from the fact that the plans for a closer co-operation among the farmers are meeting with such a large measure of success. The principal of co-operation is a good one. It has been approved by most of the leading thinkers of the world. The banding together of many small producers for the sale of farm products is permitted by the laws of the state and advocated by officials of the state. Co-operation, practiced in conformity to the laws of the state, is generally admitted to be a good thing for the farmer and not inimical to the best interests of the consumers.

"It has been practiced successfully for many years and in many countries, and is getting headway in America by leaps and bounds. There is little doubt but that it is a good thing. Under the circumstances, the wisest thing for the farmer to do is to stand by his organization. He must have had faith in the officers of his league when he elected them to office, and nothing has apparently come up to show that the faith was misplaced. Several critical periods have safely been passed since the league was organized, and its actions have always met with the approval of a large majority of the 85,000 members. Its co-operative plans will not be put into effect until 50,000 farmers have agreed that they shall be. And when they are, they must still conform to the law. The officers of the league may have made mistakes. They are but mortal. At the same time it would be difficult to find any reason why they should not always work for the best interests of the farmers whom they represent."

The above states our case fairly and without hysterics as regarded by an editor who is neither swayed by prejudice nor passion. We are advised to stick together and make hay while the sun shines—in other words, put our eggs into one basket and then "everlastingly watch that basket", as Andrew Carnegie said. We have tried the old way of each dairyman for himself and we got just what the defenseless always gets—the very little end of the horn. We have tried working together in comparative ease and harmony for several years and we have known the sweet taste of milk made at a profit.

It is now up to us to use our heads, act like men instead of mice, and have a little faith and integrity in our fellows and hired servants—until we find that this, our only hope, won't work, in which event we can go back to our fathers' ways and let the buyers take the whole hog.

But it will work if we make it work; if we want it to work hard enough and play the game. Is it worth while to take a slight monthly loss while adjusting ourselves and the world to our new plan, or shall we believe instead in the self-interested buyers and our own fevered imaginations and refuse to be saved or led out of the wilderness? It would seem only sporting to play the game with the rest of the pack, for if we assist in undermining ourselves, the League, we are only fit to become meat for the foxes.

JERSEYS

JERSEYS—DUROCS

TWO YOUNG BULLS. Splendid individuals. Out of splendid cows—sired by splendid sires. $100 to $150. Also some bred heifers and heifer calves.

100 head—no reactors
ULSTERDORP FARMS Highland, N. Y.

Register Your Jerseys

UNREGISTERED cows are just cows. You may know their fine points, but nobody else does. Registered Jerseys speak for themselves.

If you own Jerseys eligible to registration, write for application blanks and have them registered. The cost is small, and in many cases the value of the animal is doubled by the fact that it is registered.

JEREY

Owing to the great demand now existing for Jersey cattle, it is advisable for both seller and buyer to see that all registration papers on Jersey cattle are kept up-to-date.

Every animal and every sale should be promptly reported for registration and record to the American Jersey Cattle Club.

Free application blanks for this purpose are always available. Write for a supply today.

Accredited Herds in Mississippi

HOARD'S DAIRYMAN: — Mississippi has 62 accredited herds and 314 herds that have passed one successful test with a view of becoming accredited. The small number of tuberculous animals found here is a surprise though we have known several years that there were very few tuberculous animals as there were over 500 tested in this vicinity and not one found tubercular. I now have two herds on the accredited list and Mrs. Gurler has one herd of about 100 animals which is on the accredited list. One of my herds has 244 animals on the list and the other herd has 71. One county in Mississippi had ten thousand tested and only nine found tuberculous, and in all but one case the source of contamination was traced.

There have been some tuberculous animals shipped into Mississippi by unprincipled men of the stripe of Dorsey of Illinois who was sent to the United States government pen for a time for his cussedness.

The dairy business is growing rapidly in the South and we now have over 30 creameries in Mississippi. Some dairies have been selling as high as $18 per month per cow to the Macon creamery this summer. Our largest herd reached $20 per month per cow on pasture grass only.

I never saw better pastures anywhere than we have had this season. We have a variety of grasses in our pastures including lespedeza, paspalum, white clover, Johnson grass, Bermuda, and sweet clover. This belt of country in Northeastern Mississippi that is underlaid with the selma chalk rock surely is a fine live stock section. The state is now grinding this selma chalk rock for shipment to sections that need it to sweeten their soil. The cotton growers are quite discouraged this year and there will be many more dairy herds started next year as they learn that the dairy cow can be depended on. Some of the most successful cotton growers of the past tell me now that they shall put in dairy herds next year.

Mississippi. H. B. GURLER.

SWINE

Hitch Your Wagon to a Star

Tie Your Herd to the Proven Success of

Epochal Berkshires

Get a Foundation Trio or Bred Sow

From the herd that has won more first prizes and more championships at the biggest shows this year than all its competitors put together.

Some statement, but it's true!

The Epochal Herd won 62 firsts out of a possible 106 and 23 championships out of a possible 42 at the 1920 Missouri, Illinois, Iowa, Indiana, and New York State Fairs, the Eastern States Exposition at Springfield, Mass., and the National Swine Show.

Bred Sows $250 Each and Up

Trios of six months old pigs carefully and properly mated—a real foundation—$300 to $2,500.

The services of our experts will start your herd "right"; and will save you years of time in achieving success in your breeding operations. Write us. You will like the way we help you!

Epochal Berkshires are the deepest and smoothest big-type hogs.

4 Holstein Bulls for Sale

All by King Segis Pontiac Cor-Will, 190512, whose sire is King Segis Pontiac, 44444, and whose dam is an A. R. O. daughter of Pontiac Korndyke. Also two fine young registered cows, one a granddaughter of Pontiac Korndyke. Wm. N. Osborn, Wanatah, Ind.

King Oak Segis Pontiac

The Oak Dale Herd Sire Tells About His Breeding

You know it's pretty hard for a fellow to talk about himself. Folks might think he's a little bit conceited, but the boss said that they wouldn't if I stuck to facts and didn't do any bragging. So here goes.

I was born March 11, 1915, on Joe Hackney's Arden Farms, near St. Paul. You know Joe, of course. He has a pretty fair line of breeding which includes a number of the best families of Holsteins. I come from the best he had.

My dad is King Segis Pontiac Count, "The Marvel of All Sires" they call him. He has eight daughters with year records of 1,000 pounds of butter. More than 100 world records have been made by his daughters. He is also the sire of three 21,000-lb. two-year-olds. Jewel Pontiac Segis and Beauty Beets Walker Segis, at one time world's champions for both milk and butter productions in the long time divisions of the two- and three-year-old classes. In four years his daughters have won more first Association prizes than the daughters of any other sire have in a life time. His dam was a former world champion long distance daughter of the only double century sire.

My dam is Bess Piebe Ollie Homestead. She, too, has a wonderful record. At three years and ten months she made a record of 23.59 lbs. of butter and 512.09 lbs. of milk in seven days. Pretty hard to beat that, isn't it?

Her sire was Oak De Kol Ollie Homestead. Twice Grand Champion at the National Dairy Show.

Her dam is Johanna Wisconsin Bess Piebe who, as a three-year-old, produced 18.98 lbs. of butter and 472.02 lbs. of milk in seven days.

That's about all I'm going to write for this time, but I'll tell you more when I write again. In the meantime, if you are looking for some good foundation stock or want to learn more about the line of breeding carried on here at Oak Dale, just drop a line to my boss, or come and see us.

King Oak Segis Pontiac
OAK DALE FARMS
Austin, Minnesota

Grandsons and Granddaughters of Colantha Johanna Champion

We have for sale several sons and daughters of Ontonagon Emblagaard Duke, son of a 700-lb., 10-year-old cow that is also the dam of a 1,227.48-lb. 3-year-old (world's record). These are all good individuals from good A. R. O. dams. They are from 6 to 14 months old and priced at from $150 to $500.

Write for pedigrees and prices.

ONTONAGON CO. FARM, Ontonagon, Mich.
T. G. Roberts, Herdsman, J. S. Netterauer, Secretary

25 Holstein Cows For Sale

or exchange. 23 are high grades, 2 are registered. Also my herd bull, a grandson of K. S. P. A., the $50,000 bull. This bull is from a 27-lb. cow. Most of the cows are bred to him. All are young cows, well marked, heavy producers. Price, $200 per head if entire herd is purchased.
Will take 2 good teams of draft mares or mules as part payment or might consider a good used automobile as partial payment.
G. A. HIGGINBOTHAM, Rossville, Kas.

HILLSIDE HOLSTEINS FOR SALE

Dissolution and Dispersal Sale of

31 Registered Holsteins

27 Females - - 4 Bulls

at Blue Bell Farm, 3 1-2 Miles N. W.
Boonville, Indiana

After seven years of a pleasant partnership, C. M. Katterjohn, the senior member of the firm, has been stricken down with a heart affection that forces him to retire from all active business. This hard luck forces the sale of the farm, and the sale of the farm forces the sale of the cattle.

You Can Buy at Your Own Price

the 32-lb. five-year-old herd sire, PRINCE KORNDYKE PONTIAC SEGIS, H. B. No. 169913. His dam has the 7-day official record of 31 lbs. butter and she is a daughter of one of the best sons of KING SEGIS. His sire's dam has the official record of 33.75 lbs. butter in seven days and she is a daughter of PONTIAC KORNDYKE. Just think of it, a chance to buy a herd sire, chuck full of the blood of KING SEGIS AND PONTIAC KORNDYKE at your own price, yes, and YOU CAN BUY AT YOUR OWN PRICE, 15 daughters of this 32-lb. bull, 6 due to calve in the months of October and December, 1920. One due in April, 1921, four 2-year-olds and four yearlings not bred. YOU CAN BUY AT YOUR OWN PRICE, 5 four-year-old daughters of the 32-lb. bull, FLOOSMORE PONTIAC BUTTER BOY, H. B. No. 89719 and they are bred to our 32-lb. bull.

YOU CAN BUY AT YOUR OWN PRICE a 30-lb. cow whose dam is a 30-lb. cow, and whose sire's dam is a 30-lb. cow. Also a 15-lb. junior 2-year-old both bred to our 32-lb. bull. Yes, and you can BUY AT YOUR OWN PRICE, cows bred to our 32-lb. bull that will earn for you 20% on a valuation of $750 and $1,000 per head after deducting cost of feed, depreciation and all fixed charges. 11 head due to calve October and December 1920, 4 head in April, 1921. These are cattle free from tuberculosis and contagious abortion. We have never had any abortion or udder trouble.

BOONVILLE, WARRICK COUNTY, INDIANA, is located on the Evansville, Indiana branch of the Southern Railway, is seventeen miles from Evansville, Ind., and 105 miles from Louisville, Ky. The Evansville Suburban and Newburg Traction line runs cars from Evansville to Boonville every hour up to 11:15 P. M.

This sale will be held under cover, rain or shine, hot or cold, Thursday, the 18th of November, 1920, starting 1 P. M. Write at once for printed matter and catalog. Remember the date, this ad will only appear one time.

Automobiles will meet all trains and dinner will be served on the ground.

$250 Buys This Bull

Born Dec. 19, 1919.
Dam — A. R. O. 18.10, milk 406 lbs., age 23 months. Sire — A 32.74-lb. son of King Korndyke Sadie Vale. This bull is from a Federal Accredited herd. If interested apply for pedigree to

Michael Seberger - Schererville, Ind.

A Son of King Bess

from an A. R. O. granddaughter of Colantha Johanna Champion will suit you for a herd sire

Here's one from Johanna Rutena 3d, a 23-lb. junior 3-year-old that is one of the best long time prospects we have. Her dam, a daughter of Champion, has 30.37 lbs. as a 4-year-old and is now going at better than a 1,000-lb. rate on year test.

King Bess is from a 33-lb., 1,235-lb. daughter of S. P. O. M., so that in the 5 generation pedigree of this calf, every dam has over 22 lbs., 10 have over 30 lbs. in 7 days, 7 have year records, 4 above 1,200 lbs. and 5 over 1,000 lbs.

The calf is a dandy, straight, four-fifths white and well grown. He was born March 8.

Write or wire today about him.

W. J. GILLETT & SONS - - - Rosendale, Wis.

Bull Calf

Sire: Pabst Pontiac Hengerveld, 34-lb. son of King Pontiac Champion out of a granddaughter of Hengerveld De Kol. Dam: A 19-lb. two-year-old out of a 2,365-lb. junior 3-year-old. This heifer promises to materially increase her record as a three-year-old. This splendidly bred fine individual is priced reasonable — buy him now as he will be worth more when dam makes her 3-year-old record.

A. W. DOPKE & SONS, No. Milwaukee, Wis.

5-10 WELL BRED HEIFERS
SEVERAL GOOD YOUNG BULLS

are what we are offering just now. The heifers are registered two-year-olds, bred to freshen this fall. The bulls, old enough for fall service, are from A. R. O. dams and by Sir Ormsby Homestead Butter Boy, a 35-lb. bull. One is by a 42-lb. grandson of S. P. O. M. Come and see them.

ANDREW FRANK, FOX LAKE, WIS.

Holstein Dispersal

The Well-known Herd Owned by John Vanderploeg

La Crosse, Wisconsin

50 Head—Friday, November 5

Tuberculin Tested, Productive and Worthy of Your Attention

Nice, large cows, of good breeding and many of them of Show Type. 84 Ribbons have been won on this herd in the last five years also two silver cups. This tells you something of their individuality.

All these prize winners are to be sold, also thirteen fresh cows, and a number of springers. Some dandy male calves.

The Senior Herd Sire, head of this herd for 5 years and a 29.72-lb. grandson of King of the Pontiacs will be sold. Most of the young animals are sired by him, and a number of the cows are in calf to him. He will make a fine sire for some one.

A dozen of the cows are in calf to the Junior Herd Sire, King Konigen Pietertje De Kol, a 986-lb. grandson of King Segis Pontiac Konigen and Beecher Wythe 2nd, the Great Indiana Cow. Good breeding to get in your herd.

A number of daughters of fine record cows; a granddaughter of Finderne Holingen Fayne; a granddaughter of Caroline Princess Pontiac, 1113.72 lbs. for a year, and due in November to one of the best grandsons of Sir Piet., selling in the last State Breeders' Sale for $6,000; also a granddaughter of King Pontiac Champion and in calf to the Senior Herd Sire.

Sale will start at 10:30 a. m. and will be held at the Farm 5½ mi. from La Crosse on the Trunk line, 4 mi. from end of the Mormon Cooley St. car line. Conveyance to and from street car line.

Auctioneers: Mack and Jones - - Sale Manager, F. H. Everson

Absolute Dispersion of Registered Holsteins

Owned by Boehlke Brothers

Little Rapids, Wisconsin

Saturday, November 13, 1920

50 head of very nice Holsteins, tuberculin tested. Many of them Show Cattle and Winners at the Northern Fairs, and of choice breeding.

There will be 35 mature cows and 2- and 3-year-olds, most of them in calf, and a dandy bunch to select from. If you want something in the cow line that will pay you money, here is a chance.

There are thirty head in the sale sired by Cornucopia Pontiac Grindetia, No. 167685, a son of Spring Farm Pontiac Cornucopia and from Spring Farm Grindetia Pontiac. He is the sire of many winners in the Show Ring, and his breeding speaks for itself.

There are twenty-five cows and heifers bred to the Herd Sire, Vickery Sir Champion, No. 162584. He is a son of Pinehurst Champion, and his dam is the Grand Cow, Vickery Vale, with 937.75 lbs. for the year. This bull will be sold, and will be a bargain for some enterprising breeder.

Sale at 1 p. m. Sharp — Under cover if bad weather.

Sale at Farm, known as the Fox River Valley Farm, at Little Rapids. Little Rapids Station opposite farm. Interurban line from Green Bay to Fond du Lac runs through farm.

Minnesota Holstein Breeders' Association

Be sure that you buy Minnesota Holsteins from state association members. They are responsible. For list of members and other information address

THE SECRETARY, 406 MARKET BANK BUILDING, MINNEAPOLIS, MINN.

Sir Pietertje Ormsby Mercedes 41st

One of Our Herd Sires

The only son of Sir Pietertje Ormsby Mercedes and Spring Brook Bess Burke. His sire has more 1,000-lb. daughters than any other sire in the world and his dam is the only 1,000-lb. cow having three 1,000-lb. daughters.

Twenty daughters of "41st" have been sold at public sale during the past year at an average of over $2,000. They were all out of either low record or untested dams.

We have for sale several young sons of "41st" from yearly record daughters and granddaughters of Sir Pietertje Ormsby Mercedes at prices that you can afford to pay. Write us for pedigrees.

E. C. SCHROEDER FARMS

Moorhead - - - Minnesota

(Federal Accredited Herd)

Minnesota Holsteins

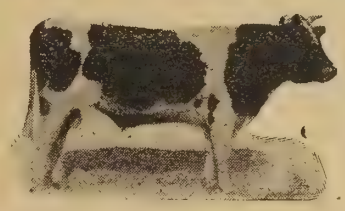
are for sale. We have several from well bred, good, year record cows, cows with records up to 1,100 lbs.



Piebe Laura Ollie Homestead King is the phenomenal present day sire with 7 daughters that average over 20,000 lbs. milk as 2-year-olds. He is a show bull as well and his sons and daughters have been winning at the shows this fall.

Better write us at once or, better still, come and see us.

MINNESOTA HOLSTEIN CO., V. S. Culver, Sec'y & Mgr., Austin, Minn.

Just About Ready for Service — $500

(Federal Accredited Herd)

is this bull we offer, and individually as good as his sire, Sir Walker Segis Homestead, first prize yearling bull at Chicago and Waterloo, 1919.

His dam just finished 305-day test with over 12,000 lbs. milk and 500 lbs. butter (2 milkings daily) as junior two-year-old and is a show heifer, first prize two-year-old and champion female at Minnesota's largest county fair and Holstein show (175 head).

Send for pedigree and photo.

A. J. Lashbrook, Northfield, Minn.

Lola Segis Pontiac Homestead

the highest record bull in southern Minnesota, heads our herd. His sire, Piebe Laura Ollie Homestead King, has more daughters that as 2-yr.-olds have produced 20,000 lbs. milk in a year than any other. His dam, a 34-lb. 4-year-old daughter of King Segis Pontiac Count, has 3 records averaging 33 lbs. and has made over 1,000 lbs. in 1 year. We have a few serviceable bulls and younger from A. R. O. dams for sale.

Clover Lea Farm, W. W. Walker, Owner. Austin, Minnesota

King Segis Pontiac Fayne Star

is one of the highest record sons of King Segis Pontiac Count. We think he is the best individual son of his famous sire. He is siring the kind of calves you would expect him to sire. Now is the best time to get one of his sons. All ages. Nothing cheap for sale.

FLECKS FARMS, FARIBAULT, MINN.

Sir Korndyke Ormsby De Kol 15th—21 Months Old

His sire is a son of Sir Korndyke Hengerveld De Kol; 51 A. R. O. daughters, one of whom has a 7-day record of 39.56 lbs. and several above 1000 lbs.

His dam has a record of 23.778 lbs. and now on yearly test.

Geo. H. Elwell, - Minneapolis, Minn.

Grandsons of Sir Pietertje Ormsby Mercedes

The sire is Sir Pietertje Ormsby Mercedes 22d a son of Minnesota's first 1000-lb. cow. These bulls are all nicely marked, straight top lines. Very good individuals from good A. R. O. dams.

For pedigrees and prices, write

O. J. GROVER, - GLYNDON, MINN.

Grandsons of S. P. O. M. 41st and a Few Good Cows For Sale

The cows either have A. R. O. records or are from tested dams, and are in calf to my herd sire, a son of S. P. O. M. 41st. The young bulls are from A. R. O. dams.

Herd under state and federal supervision. Write for complete information to

V. R. HOLMES, - ANOKA, MINN

Grandsons of

Duchess Skylark Ormsby and of S. P. O. M. 38th.

For Sale

Minnesota bred Ormsbys; Fresh Cows, Heifers and Young Bulls, by two of the best bred, year record Sires in Service. From A. R. O. dams.

M. L. Enright, East Grand Forks, Minn.

Serviceable Sons of Dutchland Aaggie Tidy Prince

I have three of these youngsters for sale, all ready for service and from A. R. O. granddaughters of S. P. O. M. Their sire is from a sister to Tidy Abbekerk Prince and already has a good list of tested daughters, including one above 36 lbs.

Write today for complete information.

E. J. BROSIOUS, - - Stillwater, Minn.

Facts in BLACK & WHITE

Purebred Holstein Cattle Save Labor

Whatever the amount of milk or butterfat you wish to produce, is it not better policy to use large-yield cows than to feed and shelter the necessarily greater number of small-yield cows? Use Holsteins and you save labor, feed, stable-room equipment and risk. They are always healthy and ready for work. Choose cows according to their capacity for converting coarse feed into milk. That is the function of a dairy cow, and that is where the big Holstein excels.

Send for Free Illustrated Booklets. They contain valuable information for any Dairyman.

The Holstein-Friesian Association
101 Hudson Street, Brattleboro, Vermont.

Young Bulls Backed By Yearly and Seven Day Records

We have for sale a few young bulls, up to 11 months old that are sired by our senior herd sire Finderne Pride Johanna Korndyke. He is one of the best sons of King Segis De Kol Korndyke and from Finderne Pride Johanna Rue, former world record cow with 1470 lbs. butter in 1 year. These youngsters are well grown and are all from A. R. O. dams with records up to 30 lbs. Write us for full information. We will answer promptly.
ANTRIM FARMS, - - - SYRACUSE, NEW YORK.

Last Chance to Get a Son of Sir Veeman Hengerveld

Sir Veeman Hengerveld Dodo 299077, born Dec. 26, 1919. A large, well grown fellow, fine individual, in color a little more than half white.

Sire—Sir Veeman Hengerveld, who now has 120 A. R. O. daughters, 17 of them with records above 30 lbs., and for the opportunity that he had in his younger days he has proved himself to be the greatest sire of the breed.

Dam—King Segis Alcartra Dodo Jessie. A. R. O. at 2 yrs. 10 mos., butter 19.24, milk 389.80. She is a granddaughter of King Segis Pontiac Alcartra. She is in my herd at the present time and a prospect for a large record in the future.

This bull has been Federal tested. Price $500.
W. D. ROBENS, Poland, New York.

High Grade Holstein Calves

This Son of King Pietertje Ormsby Piebe

is one of the best herd sire prospects ever offered at public sale. His dam, a 25.58-lb. 4-year-old, made 1,045 lbs. butter from 19,173 lbs. milk at the same age. His two nearest dams average 1,217 lbs. butter from 24,701 lbs. milk,—both of them as 4-year-olds.

King Pietertje Ormsby Piebe 22nd will suit you if you want individuality and long distance production.

He and 9 good females, most of them heavy in calf to K. P. O. P., will be sold in the **Iowa Breeders' Guaranty Sale Nov. 16-17** at Des Moines.

We will gladly send you further information.

Hargrove & Arnold Holstein Co., Norwalk, Ia.

Do You Want

A 30-lb.—1000-lb. Ormsby Bull?

If you want one of that kind—and a real individual, write for our sale catalog. We are moving our herd to California and rather than take these bull calves we are offering them at sacrifice prices.

They are sons of Sir Ormsby Skylark, the sire of Duchess Skylark Ormsby, and they're from cows with records of from 27 to 40 lbs. that either have or are making good yearly records. (Several of those dams have over 30 lbs. and will finish the year well above 1,000 lbs.)

Better write today for that sale catalog.

SENIOR CHAMPION BULL, 1920 OHIO STATE FAIR—FOR SALE

Son of King of the Pontiacs

King Pontiac Hengerveld Pondyke

Born Nov. 21, 1914 — Guaranteed in every respect

One of the finest individual sons of his noted sire. He was first in the aged bull class and senior champion at the recent Ohio State Fair. He has been used rather extensively in our herd and the offspring we have from him testify to his value as a sire.

SIRE King of the Pontiacs. The only double Century sire. Sire of 265 A. R. O. daughters, 30 with records above 30 lbs., 164 proven sons. Son of Pontiac Korndyke from one of the great daughters of Hengerveld De Kol.

DAM Hengerveld Pondyke Pietertje, a twice 30-lb. granddaughter of King of the Pontiacs. At 6 years she made 32.58 lbs. butter from 590 lbs. milk and has a 30-day record as a 5-yr.-old of 106 lbs. butter from 1,962 lbs. milk. Her sire is from a 25-lb. cow by King of the Pontiacs.

Water, Milk *and* Money

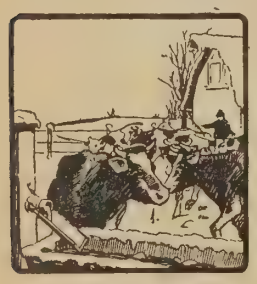
If water were labeled H_2O - and sold by the barrel at a fancy price -

more might appreciate its value in the dairy cow's ration and its importance in the making of milk.

A cow makes milk from two things: Feed and water.

Feed costs money, and yet very few of our dairy cows are being starved for want of it.

It is common knowledge that the cow that does not get enough to eat does not produce as much milk as she could produce, nor produce as cheaply.



It should be common knowledge, too, that the cow that does not get enough water to drink produces too little milk.

Water costs practically nothing, and yet many, very, very many of our dairy cows thirst for want of it.

Milk is seven-eighths water.

In order for a cow to make milk most cheaply it stands to reason that she must be given plenty of water.

Thousands of dairymen have learned that they have been getting too little milk in the past because they gave their cows too little water.

Herded out twice a day to shiver through a drink of icy tank water

They have learned that when a cow has all the water she wants when she wants it at any hour of day or night, remarkable increases in milk yields follow.

Yet there is no magic about it.

It is simply the natural consequence of following out natural laws. Just as too little feed meant too little milk — lack of enough water means less milk and a higher production cost.

Proven By Milk Records

An investigation was made in 28 herds (759 cows) where milk records were kept.

One herd showed an increase of from 5 up to as high as 10 lbs. per cow, per day, just as a result of giving the cows all the water they wanted when they wanted it.

Four herds reported an average increase of 4 lbs. per cow, per day; three stated 3 lbs.; five showed 2 lbs., three 1½ lbs.; one ¾ lbs.; one reported an increase in milk yield valued at $8.56 per cow, per year; one averaged $5; one $10; one received 3% increase; one 8%; two 10%; one 12½%; one 20%; one 33⅓%; and only one herd out of the 28 found that the increase was "not much." An average increase per cow per day of 2.45 lbs.

And now you ask yourself the question, "Can I afford James Cups in my barn?" "Would it not be better to wait until next year?"

Neither of the questions has anything to do with the matter.

The real question is "Can you afford to be without James Cups?"

You Lose By Waiting

The plain fact is that if next year some one were to make you a gift of the James cups, you would lose money by waiting.

Two pounds milk per cow per day, for the 200 days the cows are in the barn, means 400 lbs. of milk, which at $3 per cwt. is a total of $12 for the season.

In these days when feed and other costs are high, can you afford to neglect this extra profit?

James cups will pay for themselves twice over during the season. Can you afford to be without them?

James cups will save much time and work — investigation shows that the labor saving is $2.50 at least each year.

Can you afford to continue the frost biting work of chopping open the ice bound tank out of doors?

Can you afford to continue feeding the bothersome tank heater through the chilly winter days?

Don't put off this drinking cup proposition a single day. Write us at once for a definite price estimate covering a drinking cup installation in your barn.

We will quote you a definite price if you will tell us the number of stalls, of calf pens, of cow pens, of bull pens and whether wood or steel.

Barn Book Free

If you are interested in other labor saving equipment for the dairy barn such as cow stalls, carriers, steel pens, ventilators, etc., or if you are interested in up to the minute ideas in the planning of the new barn, ask also for our big barn building and barn equipment book "The James Way No. 27."

Fall Reflections of a Farm

HELEN S. K. WILLCOX, NEW YORK

HERE it is autumn again and the various poets of note, nonsense, and notoriety are in the midst of spouting timely verses concerning the frost on the punkin' and the harvest moon and the wind on the oat stubble and so on and so forth. As for me, I am thinking rather painful thoughts of the long, cold season ahead and wondering dismally if our next six months will come up to, rival, or beat the good old winter time of 1919-20. Folks who pretend to know a thing or two have always said that I do my best when the snow drifts pile mountain-high and cover my fields and pastures so that I do not feel the cold, icy drafts nor run the risk of being scantily covered with a chilly sheet of ice, which smothers the sleeping seeds in my care.

But farms have feelings just like you humans, I would have you to know, and such a winter as last is going it a bit strong, even if it is good for our unborn children, the crops. Farms, if they had their choice, would prefer a medium stiff winter, snow enough for slick sleighing and motoring for four months, maybe, and plenty of nice warm sun pretty near every day to jolly things along a little. But then! Why worry over the future? It is the pessimistic present I started in to cuss and discuss.

Of course you understand that what bothers our owners, the farmers, bothers us in the same proportion, and as things are turning out this fall, it stands to reason that we are being bothered 'way down to our farthest formations. And why? Well, you don't have to dig around very deep to find the reason. The fact is, our kind old mother, Nature, in sending the world such an unusually severe winter as last, rather overdid the matter, if it is a sure fact that bumper crops do follow that kind of a season. As a result, we farms found ourselves raising record rations for man and beast all through the country. In the beginning of the growing season, our owners were tickled pink and they told us we were sure some old sports to get into the produce game so thoroughly and help out the near-famine the world was predicted to be facing this winter.

But alas and alack! It now seems that in spite of the frightful shortage of farms and farmers over which the city papers have been hollering ever since the war, those of us who were left managed in spite of less acreage and less workers to raise a surplus of food, which would be a matter of sincere congratulation and pride to any honest farm and farmer if it weren't for the forceful fact that the plentiful bounty of our combined efficiency (our owners' and ours) is in some instances rotting on the ground, and in others is being sold at far below cost to whoever will buy.

Yes, we farms are telling each other that it's a queer situation and we are wondering where our owners are planning to go from here. I happen to be a fertile river farm in Chenango County, old New York State. I neighbor with a lot of fellow-farms who feel just the way I do about these things. We dope it out that this crop question is a lottery all right, all right. How in a pear tree's name is a farm and its owner going to know at planting time that their stuff won't be worth a miller's dam and they might as well hang up their spade and hoe on the start and call it a six-hour day? It certainly is enough to give honest soil the shivers.

Probably you've read lately how in Connecticut and those down-east states, as well as out in the far west, the land has been taken up considerably by what most folks think are earthquakes. But don't you believe it. You listen to me and you'll learn that my brother and sister farms in other states are just plumb disgusted with the way their fine fruit and grain and vegetables have gone begging recently on our metropolitan markets and they are showing their combination of nerves and fear and disgust by shaking and shivering and throwing things around generally. And who could blame decent, well-treated, hard-working land for resenting such a state of affairs when we and our owners were led to believe this spring that the whole world would go to the demnition bow-bows if we didn't raise enough cows to keep everyone fat and good natured?

Well, I'll say we've done this thing all right with a vengeance, and while the railroad men and others draw down a meagre ten dollars a day and so on, we behold the sad spectacle of our owners sacrificing the champion foods we raised for tiny little prices one would need a microscope to find, and at that, some of our men refuse to dispose of their fruit and cabbage and potatoes at such unfair figures and instead are recklessly and very ruefully feeding them to the hogs and cattle and anything else that has teeth.

Yes, it's a fact that in our part of the state, early, heavy, dandy, Danish, ballhead cabbage is worth only $5 on the car.

Oh, no, we didn't sell ours for $5 a ton, not by a long shot. Instead, the pure-bred black and whites are going to get cabbage for breakfast and dinner and supper and if they live through it, we anticipate their making some milk, rather thin, perhaps, but it is decidedly up to them.

The only possible good which my owner managed to extract from the cabbage situation was to erect a sign out in front beside the potato sign and advertise to the world that we would

(Continued on page 702)

PART OF THE MOUNT HERMON HOLSTEIN HERD OF MASSACHUSETTS

Considerable attention was lately directed to the Mount Hermon Holstein herd in Massachusetts because of the sale of twenty head for shipment to Hawaii. These animals were selected after a number of herds in different parts of the country had been seen and the sale is a tribute to the character of animals which have been developed at Mount Hermon.

The foundation herd at Mount Hermon was purchased in 1906 for less than $2,500. Of the present herd of 200 head, 90 per cent trace to ten foundation cows. Only two animals were not bred and developed at Mount Hermon. In the original selection, particular attention was given to individuality. From that time nearly 700 pure-bred Holsteins have been bred of which 51 per cent have been heifers and 49 per cent bulls. A great per cent of the bulls have been sold to New England farmers. Of the entire number of animals born in the herd, fewer than five calves have died from scours and only thirty have given premature births. These premature births have been scattered over the entire period of fourteen years.

In the development of this herd, the work with Holsteins has been purely incidental in the larger work of the school. The cattle are cared for almost entirely by students. While this decreases rather than increases the production, it nevertheless gives many students a chance to have a very vital part in the care of live stock, which should be of great value to them in years to come. Every animal tested in the herd stands in her regular stanchion, is milked by students, and tested under herd conditions.

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Dairy Cattle Breeders Plan Testing Company

Representatives of the Holstein, Jersey, and Brown Swiss Dairy Breed Associations, the University of Illinois, and the Illinois Agricultural Association at a meeting held at the offices of the Illinois Agricultural Association, Chicago, October 11th, were of the opinion that a central cow testing company or farm for pure-bred dairy cattle was feasible and should be encouraged. A committee of two men from each of the organizations represented will be appointed by E. M. Clark of the Live Stock Marketing Department of the Agricultural Association to work out definite plans to submit to breeders.

It is planned to have a farm owned by breeders, equipped for official milk and butterfat testing, where breeders can send their cows for official test work. The dairymen also believed that this farm testing company should own one or two outstanding bulls for service on the cows which are sent to the farm. The greatest danger of such a company would be the spreading of disease, but it was thought that if barns were built so that no animal would come in contact with another, the plan could be successfully carried out. A committee consisting of E. W. Wilson of Peoria, president of the Brown Swiss Association, W. A. Brewerton of Libertyville, president of the Jersey Breeders' Association, George Fox of Sycamore, president of the Holstein Breeders' Association, and H. W. Mumford, director of the Live Stock Marketing Department of the Illinois Agricultural Association, was appointed to promote the erection of new dairy barns at the state fair grounds and at the University of Illinois. This committee will take action on any subject of interest to all breeds of dairy cattle.—Illinois Agricultural Association.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

Jones—"If you had this Bolshevism thing to settle, what would you make them do?"

Brown—"Put rings in the noses of prize bulls, get stumps and rocks out of unplowed land, guide a tractor or a balky hoss over a field in the hot sun all day, and then make 'em eat at a city restaurant at city prices."

⚜

Saturday Night in Town

The wagons hitched on the square.
The automobiles that need no hitching.
The crowds along the streets.
The movie fans trying to get a seat.
The special sale of kitchenware at Brown's.
The children, just a little frightened.
The tea and coffee stores aroma.
The dash for ice cream soda at the bank corner.
The laying in of chewing tobacco stock.
The purchase of the new cream separator.
The giggling girls everywhere.
The ride back to the farm in the moonlight.

⚜

"Every time I see an orchard tree, so filled with big apples that the boughs rest on the ground and they look as if they were suffering from the load they carried, I feel as if I wanted to reach up and shake hands with 'em, and pat 'em on the shoulder for their good work."

⚜

Letters Home

"Dear Maw: if it's all the same to you, I'd like to come back to the farm. After I had been in the city three weeks I got a job as conductor on a trolley car. But it's the eating in restaurants that I can't go. If I don't get some flapjacks and maple syrup and country sausages and apple pies before long I'll just nachally die. Gee, Ma, I never knew what a fine cook you was until I left home."

⚜

A Thought for Mother

In all my dreams, there comes to me
A mother at her daily tasks.
Love, wide as any boundless sea,
The one who gives and never asks.
The hands that toil, the hands that give
Caresses, softly tender, sweet;
The hands that make the wide world live,
The heart that makes the earth's heart beat.

The country mother I love best,
The one who has the harder task;
The one who has the clod-made zest,
Who has but humble chores to ask.
I know her pies, her wholesome bread.
The butter and the crocks of cheese.
The hand clasp and the patted head,
The little thoughts that seem to please.

⚜

After I visit a county fair, I always respect the farmer more and more. You can't pay much respect to a potato or a cucumber or a bottle of milk when it is handed to you on a silver platter. Contact with the source of things is what breeds respect.

⚜

"How did that city sharper come out who tried to sell Dairyman Jim Higgins a gold brick?"

"Well, before Jim got through with him, Jim had sold the other chap an abandoned farm and three lots in a swamp."

DE LAVAL

CREAM SEPARATORS

Save in 7 Ways

COST since while a De Laval Cream Separator may cost a little more than a poor one to begin with, it will last from ten to twenty years, while other separators wear out and require to be replaced in from one to five years.

PROFIT in more and better cream, with less labor and effort; every time milk is put through the machine, twice a day, or 730 times a year for every year the separator lasts.

SATISFACTION which is no small consideration, and can only come from knowing you have the best separator, and being sure you are at all times accomplishing the best possible results.

QUANTITY of cream that no other separator will recover completely, particularly under the harder conditions of every day use.

QUALITY of cream as evidenced by De Laval butter always scoring highest in every important contest.

LABOR in every way over any gravity system, and also over any other separator, by turning easier, being simpler, easier to clean and requiring no adjustment.

TIME by hours over any gravity system, and as well over any other separator by reason of greater capacity and the same reasons that save labor.

Easy to prove these savings

These are all facts every De Laval local agent is glad of the opportunity to prove to any prospective buyer. If you don't know the nearest De Laval agency write the nearest De Laval office, as below.

SURFEITED WITH NITROGEN

W. W. WEIR, WISCONSIN

SOME who delight in studying the habits of plants would like to believe that they possess a peculiar ability to secure from the soil and air the elements they require in just the right amounts and proportions to best meet their growing needs. If this is so, then the grain-lodging problem is a myth. But the lodging of grain is a problem, a real and a growing one.

We hear our fathers tell of the wonderful growth of straw during the early days of farming when the land was new. "Every stalk stood up like an Indian, tall and straight." Now after only about fifty to sixty years of cropping, the grain on some of those same fields grows only about half the length of straw and frequently, long before harvest, the whole crop, or the major portion of the oat crop, may be found lopping upon the ground as if the stalks were too lazy to hold up their heads to allow proper maturity.

The lodging of grain is general. It has come within the experience of every grain farmer to a greater or less degree. It has been and is still a common experience of the Illinois and Iowa farmers. This had considerable to do in giving corn its pre-eminence on those rich, black prairie soils of the corn belt. The lodging problem looms up big in sections given over to intensive dairying. This is certainly true in Wisconsin. Indeed, many a Wisconsin dairy farmer has already come to recognize the growing of oats, in particular, as a most annoying problem. Others are in a quandary whether or not to grow small grains at all. It is a common question now at agricultural meetings how to prevent oats from going down. There are soil conditions where the only answer to that question is, "Grow no oats at all". In the early stages of marsh land development the growing of small grains is seldom recommended, because the crop is sure to go flat long before harvest.

Fig. 1. Response to a liberal supply of available nitrogen; but no lodging of this crop. Each shock represents amount of corn cut from one square rod.

Courtesy J. B. Lippincott Company.

Fig. 2. The use of mineral fertilizers goes a long ways in solving the lodging problem on peat soils. To right, rock phosphate and potash applied in 1913 for corn caused oats to stand up in 1918.

It is rare, indeed, to see grain lodge on depleted soils, on red clays, on light-colored silt loams and clay loams, and on sands. This crop problem is confined to black soils—soils that are usually well supplied with organic matter and comparatively rich in available nitrogen. There is a close relation, therefore, between grain lodging and the nitrogen supply in soils. It is the comparative abundance of nitrogen rather than the lack of it to which we must turn our attention as the cause of the trouble.

Those Generous Appetites

It seems that generous appetites are widely distributed in nature. Seat a small boy before a pile of candy, and it's ten to one he will eat himself sick. Set a huge, juicy, strawberry shortcake before a man just finishing his meal. We can guess the rest. Once, when a boy down on the farm, the writer brought from the corn field thirteen grown mice and about twenty young, hairless ones, and gave them all to the house cat. As a result the cat went mad, very mad. Corn fodder grown on nitrogen-rich soil is richer in nitrogen than fodder grown on a poor soil. Corn is lavish in the use of nitrogen when given a chance. Sow oats on a soil "black with nitrogen" and the chances are you'll get grain surfeited with nitrogen.

Nitrogen, Shade, and Lodging Relations

Just an over-dose of nitrogen is not enough to explain the lodging question. Corn is a gross feeder on nitrogen, yet did you ever see checked corn lodge like oats? The writer never did, though he has seen thickly and closely planted fodder corn lodge badly. Have you ever observed how much better wheat stands up than oats or barley? And rye the best of all—even though it may grow six feet tall. Why this difference? It isn't because rye and wheat have more mineral in their straw to the pound of crop. Oats heads the list in this respect. This is what average chemical analyses show. It is not to be inferred that the mineral feeding of grain has no bearing on the lodging problem. The taking in of a sufficiency of phosphorus, potassium, and calcium (lime) by the plant may produce an important physiological effect upon the living protoplasm of the cells, which effect may exercise a better "balanced" control over the intake of nitrogen. This, however, has not been experimentally or practically shown. Thus it remains only a theory.

The author has tried acid phosphate and rock phosphate on some "lodging" soils, but with no apparent results. Some claim that potash fertilizer helped to some extent in making stronger straw. In a few cases pulverized limestone has been tried on acid soil for barley—and, strange to say, surprising results were secured. Rainfall and other weather conditions must be carefully taken into consideration before any definite conclusions can be drawn on this particular phase of the questioin. It is known for a certainty that the judicious use of phosphate and potash fertilizers on peat and muck soils goes a long ways in solving the lodging problem on these two types of soil.

It is nitrogen that is largely responsible in making plants green and in promoting growth. When a gardener wishes to "force" his vegetables, he feeds them a ration rich in nitrogen, and obtains as a result crisp and juicy products. Grain that secures a liberal supply of nitrogen makes a rapid growth, and the stems tend to become rather watery and weak. Shade or half-shade augments this condition, and hence a much weaker straw results.

Rye possesses comparatively meager leaf surface. Its leaves are narrow and they are inclined to hug the stems, quite unlike oats or barley. This scarcity of leaves permits sunlight to strike on every portion of the rye stem clear to the ground; and, because of the sunlight, quick, watery growth is prevented, and the stem grows strong and tough instead, possessing the remarkable bending and straining powers peculiar to hollow cylinders. This explains the strength of the cornstalk when planted in checked rows. Wheat is very much like rye except that its leaf surface is somewhat greater.

Oats and barley, on the other hand, develop an abundance of broad leaves, particularly when liberally fed on nitrogen. These broad and heavy leaves cast a heavy shade upon the lower portion of the stem and, as a result, that portion of the straw growing in the shade becomes succulent and consequently weak. As the crop advances, greater and greater weight must be carried until finally the super-structure becomes so heavy, especially when wet with dew or rain, that the underpinning gives way, and down goes the crop probably just entering the dough stage.

Incidentally, this shading proposition in the case of oats and barley makes it doubly difficult to get a stand of clover or of grasses. When lodging occurs, the chances are that so thick a matting of straw and leaves is formed that the young seeding is killed entirely because of the lack of sunlight. In this relation wheat and rye are splendid crops to use in getting a stand of clover. As regards rye, too often the land is rather poor to nourish the seeding properly, to say nothing of the moisture supply after the rye is harvested. The writer well remembers that whenever his father wanted to be sure of getting a good catch of clover on any particular field, or a portion of it, winter wheat was sown, and he does not recall a single failure. In this respect wheat is a splendid crop to introduce into the rotation, not necessarily for the whole farm, but for certain fields that need the clover. Barley has an advantage over oats as a nurse crop in that it matures earlier, and hence is cut earlier, thus giving the seeding a better chance—that is, if the sun at the time of harvest is not too burning hot.

What Can We Do About It?

It seems very probable that the rapid growth due to nitrogen, together with the shading factor are the prime causes at the bottom of practically every case of grain lodging on rich, upland, mineral soils. What can we do about it? Can anything be done? In some cases very little or nothing can be done to immediately correct the soil condition. Instead of small grains, other crops should be grown, such as corn, cabbage, and sugar beets. There are, nevertheless, certain points well worth keeping in mind when dealing with this question under discussion.

It is known to be a fact that some farmers have been advised to plow some of their fields very deep so as to bury the top layer of soil containing the organic matter (not too much

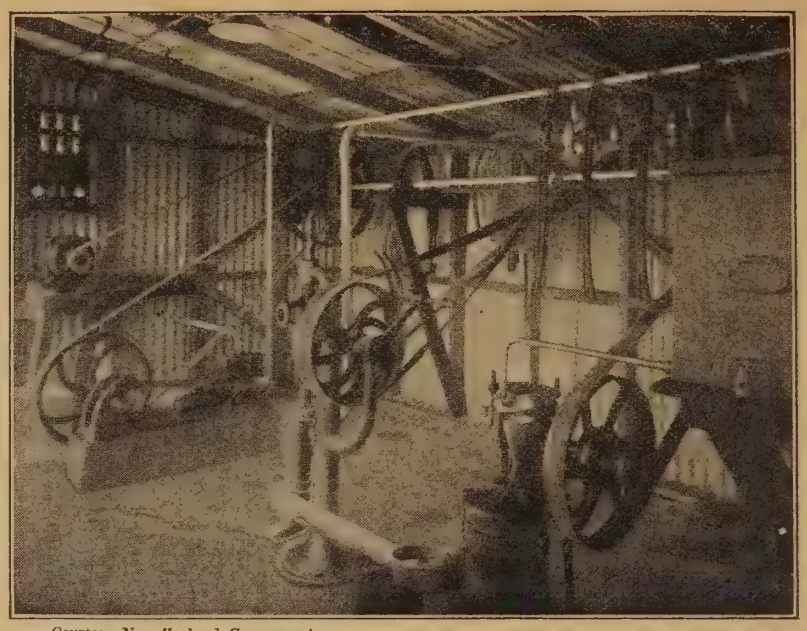
(Continued on page 710)

Fig. 3. Keep the soil compact and you check the formation of available nitrogen in the soil. To left, sod was fall plowed; to right, sod was spring plowed—other conditions being equal. Oats would lodge on area of the big corn.

Fig. 4. The oat crop that stood up because the seed was broadcasted on a rich corn stubble field, and covered by shallow disking. If this is a premium on laziness, then here is a case where it paid to be lazy.

Electricity in New Zealand

GEORGE OSBORNE, NEW ZEALAND



THE government of the Dominion of New Zealand in 1910 passed legislation which enabled it to develop water power throughout the country, and as a sequel the Lake Coleridge Works were started and a continuous service run there from March 1st, 1915. The water is taken from an Alpine Lake 1,667 ft. above sea level, and is discharged into the Rakia river, 500 ft. below. The terminal of the line is at the city of Christchurch, 65 miles distant. The country passed through is mainly wheat growing, and a fair amount of it is in dairying. In Christchurch itself the current is used for industrial and municipal undertakings and domestic lighting and heating. The rural district served, although large, is not essentially dairying as say the large part of the southland, Waikota, Taranaki, Thames Valley, and North Auckland. At the same time the industry is carried on along quite modern lines in the area served by the Lake Coleridge scheme, mainly by the Taitapu Dairy Co.

Mr. Evan Parry, the engineer who was specially engaged by the government to inaugurate the work and as chief electrical engineer of the Dominion, was an enthusiast in the application of electricity to the dairying industry to the fullest possible extent, and he included electricity as a substitute for other means of heating surfaces, taking the place of the boiler for water-heating, for pasteurizing, and for curd heating. He was most helpful to all dairymen interested in the application of electricity to their business. He has recently joined one of the great English electrical interests and his successor is Mr. L. Birks, to whom I am indebted for the leading facts of this article, given specifically for Hoard's Dairyman.

There are over 100 farms around the city of Christchurch using the Lake Coleridge current. The cost of lighting a moderate sized farm with 24 lights is $48 to $50 per annum, providing lights in the cow byres, stables, outhouses, and dwelling house. The milking machine motor used is additional. It is used for separating machine and pumping, and when not in use for these specific purposes can be employed in supplying power for wood-cutting or other work. The government's fixed charge for these motors is $101 per annum. The even speed of the motor is much preferred for driving the separator. All churning on farms and factories within the Lake Coleridge system is now done by electricity. The motor is found to be the ideal power for the milking machine.

The Taitapu Dairy Factory Company operates its large factory and plant with the Lake Coleridge current, and it also has installed complete reticulation throughout the area occupied by its milk suppliers. This has resulted in a great stimulus to the industry in this district.

A test was recently carried out by the New Zealand Public Works Department in Christchurch to ascertain the energy required to operate five milking plants. The motor in each case was 3 h. p., all of the same make. The milking machines were of different makes. The cream separator was installed in each case, but it was running after the milking machines had finished, except in plant E, when separator and skimmilk pump were running simultaneously with the milking machines. The following are the results:

Courtesy New Zealand Government

AN ELECTRICAL INSTALLATION IN NEW ZEALAND

This is a typical installation of milking, pumping, and separating for a New Zealand dairy. Current for a three horse power motor is supplied by the government at a cost of $101 a year, and this is sufficient for a dairy of 40 to 90 cows.

Plant	No. cows	No. buckets	Units used per month Jan.	April
A	45	3	99	72
B	40	3	114	105
C	35	3	138	115
D	90	6	96	65
E	65	6	186	162

These months correspond to July and October in the Northern Hemisphere, in temperate countries. The conclusion drawn from the figures is the low power required. The value of the idle current is also enhanced. The energy taken was very variable and apparently depended more on the efficiency of the milking plant employed than on the number of cows milked. The largest herd, 90 cows, required the smallest amount of energy. The charge for electricity in each case was $101 per annum.

As already stated, the Lake Coleridge plant is owned and operated by the government, but there are private companies supplying current to dairy farms and factories at about the same price as quoted. The use of electricity is extending wherever farms and factories can obtain it at a reasonable price. It is a material factor in ameliorating the labor difficulty. New plants are arranged for in Southland, Te Awamutu, and Thames, and extensions at Hora Hora in the Waikato (North Island) and Lake Coleridge. These will all serve dairy territory and increase the industry.

Hardy Alfalfas in Oregon

F. L., BALLARD, Oregon College of Agriculture

GRIMM AND COMMON TYPE IN BLUE MOUNTAIN SECTION OF OREGON

Grimm on right yields $56 more per acre than common.

GRIMM alfalfa is making dairying a more profitable industry in several parts of the state of Oregon as it is proving well adapted to districts of high altitudes where severe winters prevail. Before the general adoption of Grimm alfalfa as the most desirable variety, considerable winter-killing was experienced, often to such an extent that alfalfa was considered a hazardous risk. Now, however, in these districts large acreages are being harvested annually and with the development of silos in these regions through the use of sunflowers and corn grown from acclimated seed, dairying is becoming more profitable and many young farmers are taking it up who, under the old type of farming based on wild hay and range for live stock, would not consider the dairy industry.

Union and Deschutes Counties are two leading counties in the acreage of Grimm alfalfa and are also among the leading counties in Oregon from the standpoint of increased interest in the dairy business. Union County was formerly a range live stock county. In parts of the county wheat was grown under the summer-fallow system which leaves the land plowed and harrowed but in idleness every second year in order to conserve sufficient moisture for the wheat crop.

A few seasons ago, under the leadership of County Agent P. H. Spillman, a number of farmers sowed Grimm alfalfa on lands which had previously lost their crop because of winter-killing. The Grimm alfalfa succeeded well and a series of field meetings and farmers' picnics were held to demonstrate the value of the hardy type alfalfa. Fred Zaugg was one of the farmers demonstrating the improvement of Grimm over other alfalfa types. He found that where his common alfalfa was badly injured by winter-killing and produced two tons per acre, his field of Grimm produced four and three-fourths tons. Hay in that county is valued at $20 per ton usually, and on that basis Mr. Zaugg's profit per acre from Grimm alfalfa was $56.

Several other farmers had equally favorable results and as a result the following year Mr. Spillman pooled orders for sufficient seed for 1,200 acres and a total of about 1,600 acres were sown. The yields from this seed are proving equal to expectations and several hundred acres additional were sown this spring.

GRIMM ALFALFA IN HIGH MOUNTAIN VALLEYS OF EASTERN OREGON IS PROVIDING THE BEST TYPE OF FEED FOR DAIRY ANIMALS

GRIMM ALFALFA ON RIGHT VS. COMMON TYPE AT ELEVATION OF 3,000 FT. IN EASTERN OREGON

While working with the Grimm alfalfa, County Agent Spillman also succeeded in demonstrating that the summer-fallow land on the wheat farms could be used to advantage for growing acclimated corn or sunflowers for ensilage. The wheat crop following corn was slightly reduced but the gross returns of grain and ensilage for two years compared with a grain crop and a year of idle summer-fallow were in favor of the diversity plan. As a result, where there were about 300 acres of corn and no silos in Union County in 1914, there are this season approximately 2,000 acres of corn and 116 silos, with about thirty silos to be erected this year.

Practically as good results have been obtained with Grimm alfalfa in other mountainous districts. For in-

How Big Is the Farmer's Job

L. R. LUTHER, INDIANA

WE can safely say at the outset that the farmer's job is as big as he makes it. It depends entirely upon the farmer himself and the view he takes of his own occupation. He who merely follows his team and never concerns himself with the problems and possibilities that lie before him may not have a big job. But the man who has a keen desire to make every farm operation pay, to do constructive work by building up his land, by improving his live stock, and by beautifying his home, has a job that compares favorably with that of the president of the United States in all respects excepting salary.

In the following discussion I hope to set forth what seems to me essential qualifications of a successful farmer.

What the Farmer Should Know

The earliest conception of a farmer was one who tilled the soil. This early idea still holds true, for even the highest specialized type of farming requires the use of at least a small amount of soil. It is therefore necessary that the farmer have a working knowledge of his soil. It would be well to understand the various classes of soil, their composition and relative water holding capacity. A composite sample of both the surface and subsoil in various fields should be taken occasionally to have tested. There is a right way to take his sample and we expect that our modern farmer has learned this method. If he has had special training in agriculture, he will probably make the various tests for himself for acid, humus, and phosphates. In preparing to put alfalfa or clover in a certain field, the approximate lime requirement of the soil should be taken.

Last fall I took a composite sample of both the surface and sub-soil from a field where I planned to sow alfalfa this year. Upon making a careful test of this soil, I found it was in need of about three tons of lime to correct the acidity. Of course I applied three tons per acre, where had it not been for the test made, I might have stopped at two tons as was recommended by several.

THE COWS MUST BE UNDERSTOOD AND KEPT COMFORTABLE TO BE A SOURCE OF PROFIT

THE FARM GARDEN IS COMING INTO ITS OWN AS A SOURCE OF PROFIT AS WELL AS PRIDE AND PLEASURE TO THE FARMER AND HIS FAMILY

Perhaps second in importance to the soil itself, is the proper selecting, rotating, growing, and handling of farm crops. The farmer must study closely the crops available and make a wise selection of those best adapted to his soil, climatic conditions, and his own needs.

It is a recognized fact that the successful farmer should keep live stock. This must be done to consume the cheap roughage and maintain the fertility of the soil. With this branch of farm business comes many problems such as the breeding, feeding, care, handling, advertising, and selling of stock. Each of these divisions is a special subject to be studied, practiced, and mastered by this modern successful farmer.

The farm orchard is another very important factor which must be understood and handled carefully. No thinking person would be willing to rate one as a good farmer unless a well kept farm orchard stood out prominently as a testimonial to the farmer's ability, forethought, and good judgment. To handle rightly and maintain a good farm orchard, one must know the fundamentals and many details of horticulture. Spraying, pruning, thinning, harvesting, and planting are the important factors that must be studied and practiced.

Pressure of necessity, during our great war, forced upon the people the importance of gardening. The farm garden is in fact coming into its own as a source of profit as well as pride and pleasure to the farmer and his family. There has been developed new ways of storing, canning, and preserving vegetables so they may be used throughout the year. New insect

SETTING THE STAGE FOR A BIG SALE

ORIN CROOKER, ILLINOIS

FEW people who attend a big sale of live stock or dairy animals appreciate the large amount of work that has been necessary in order to "put it across" without a hitch. To the spectator it looks easy enough. The animals are led on and off the platform—the auctioneers and bid getters go through their accustomed gymnastics and vocal exercises—the crowd goes home—the clerk totals up the days' receipts! Thus, at least, does it appear on the surface. But to set the stage for this three- or four-hour performance requires weeks—perhaps months—of effort. The scope of the sale must be worked out, suitable publicity must be given, animals must be brought to sale ring condition, provision for the comfort of the crowd must be made. After it is all over, those who have engineered it are apt to feel that with a day or two of coaching they could handle a three-ring circus.

So many of those who attended the Guernsey sale at Tilden Farms, near Delavan, Wis., recently, commended the way in which everything was handled that it seemed as though the story of how this sale was worked up would be of interest to the many readers of this publication who attend or engage in similar sales. The following account, although phrased in the first person, is really a composite description for which the writer is indebted not only to Mr. James H. Murphy, the manager of the farm, but to Wm. Geist, foreman, Joseph Deneen, herdsman, and others about the place.

"We started to make our plans for this sale many months ago," our informant began. "Of course, it wasn't until about the first of April that we actually began to put the animals in sale condition, but we were busy on the job long before this. Before we could do anything at all—even in the way of starting publicity—we had to decide upon the animals which we would offer for sale. In doing this we had to choose wisely and bear in mind that buyers would come seeking to meet their own needs and not particularly just to bid on what we might put up for sale. Consequently it was necessary to arrange our sale list with this in view. We decided that 60 animals would be all that could be disposed of without wearying those in attendance. Of this number, we determined first of all that only five should be males, as this was about the proportion we felt would be in demand. The remaining number we grouped in three classes in order to meet all sorts of buyer's needs. One-third of these animals were to be young cows and milkers; another third were to be cows bred to freshen around sale time; the balance were to be 'open' stock ranging from six to sixteen months. On this

basis, then, we went through the herd list and picked the animals to be included in the sale. This done, we were ready to prepare our advertising copy and start work on our sale catalogue.

"Publicity for a sale of this kind entails a lot of work. In our case we had to make a special bid for attention since it was to be our initial appearance in the way of an 'annual sale'. Guernsey men had to be informed of the fact that we were going to hold a sale. Another year, perhaps, many of them will be on the watch for it. We think we did a thorough job in the way of publicity. Some folks might think we over-did it. But we have no regrets. Every animal listed in the catalogue was sold. Our advertising was planned with a view of covering the field as thoroughly as possible. For instance, it appeared in a national publication going entirely to Guernsey people. It appeared in a national dairy paper going to dairymen who handled all sorts of cows. It appeared in a state farm paper going to Wisconsin farmers, all of whom, no doubt, keep cows even though they may not be engaged largely in dairying. In addition to these publications of wide circulation we ran display 'ads' in all the local papers in Walworth County by means of which we made sure of drawing a crowd—and a crowd is essential to a good, brisk sale. It may interest you to know that our advertising outside of the county brought us 200 special requests for sale catalogues—most of them from distant points.

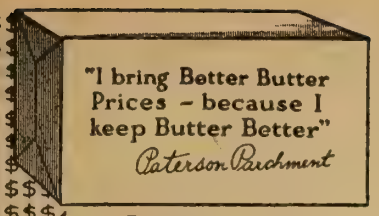
"This, however, did not complete the work of publicity. We took the membership list of the American Guernsey Cattle Club and mailed our sale catalogue to five hundred selected addresses. Each catalogue was accompanied by a personal letter sent under separate cover. These letters were all alike, of course, but they were not mimeographed. Each was separately typed by our office man, and personally signed by Mr. Murphy, the manager. There was a 'personal touch' to these letters which we believe helped very much to focus attention on our sale.

"Publicity, too, is an expensive pastime, even in the live stock sale business. Our advertising cost between $700 and $800. Our sale catalogues, which were printed on a good grade of paper containing several photographs taken especially for it, cost us 45 cents each—and we used an even thousand of them. But to make money one has to spend money, and our sale expense, as you will see shortly, did not exceed the average which such sales entail.

"The work of getting the sale animals ready was under way fully two months before they went onto the platform. Our first move was to separate these sixty animals from the rest of the herd and put them in a barn by themselves. Then we started a feeding campaign to put them in prime condition. They were fed liberally three times a day on grain, silage, and beet pulp moistened with molasses. Three weeks before the sale every animal was clipped. If their feet were out of shape they were trimmed up. Accumulations on the horns were worked off with horn rasp and sandpaper and the horns themselves brought to a splendid state of polish. A week previous to the sale the animals were given a bath to put their skin and coats in good shape. Their tails were scrubbed and combed. We had as pretty a bunch of cows on the day of the sale as you ever saw. But this, too, was work. Mr. Deneen, our herdsman, will vouch for that. In addition to all of this, each animal was broken to lead on the halter and put through its stunt of making its bow to an imaginary audience. We didn't want them to get stage fright. With one or two exceptions they behaved remarkably well. All of us were proud of them.

"The day of the sale Mrs. Murphy, the manager's wife, assisted by part of the farm help, attacked another huge task—that of feeding the hundreds of people whom we anticipated would be in attendance. As the sale began at 12:30 o'clock we knew that many would have had their lunch before their arrival, but we knew, also, that there would be scores upon scores whose 'tummies' would need a bit of refreshment in order to put them in good humor for the afternoon's work under the roof of the big implement shelter where the sale would be staged. Accordingly, Mrs. Murphy and her aides packed 400 cartons of lunch. Each of these contained two ham sandwiches, a cookie, a doughnut, a piece of cheese, a banana and a good cigar. On the morning of the sale we bottled 400 pints of fresh milk and placed it on the ice. Hot coffee was served to all who wished it. Three hundred of these cartons were taken before the sale. The other hundred were given out at the close to such as might have no opportunity of securing supper before a late hour. There was no charge for this service, and the crowd was not backward in voicing its appreciation of our hospitality. But it's some work to prepare food for 400 cartons and assemble it properly in the containers. If you don't believe it ask Mrs. Murphy.

"There were other things—many of them—to see about. Drinking water had to be piped to a convenient place, autos provided for handling such of the crowd as came on the train, the barns and premises were put in shape for visitors. This last was no great task, however, for we aim always to keep things pretty tidy. Our chief effort in this line was to whitewash all the stables and clip the lawns.



"Fortune favored us with a perfect day and the whole farm force of thirty odd was on tip-toe for the event. Autos began driving in about half past ten and by noon the pasture lot looked as though we had grown an auto crop of bumper proportion. There were between seven and eight hundred people in attendance. Everything went through without a hitch and every animal of the sixty was sold save one which through an error had been omitted from the sale catalogue. The total receipts were $21,880—an average of $365 a head. The sale expense, including all outside expenditures over and above the regular farm operating costs, was a trifle under $35 a head, which is not far different, we believe, from expense accounts on similar sales."

How Big Is the Farmer's Job

(Continued from page693)

pests have been discovered along with new methods for their control and eradication. Gardening, then, is a smaller branch of the farm business which cannot profitably be neglected or overlooked. It will be seen that to do it justice, some thought and study must be devoted to the subject.

In the successful handling of farm crops, horticulture and gardening, one will become familiar with the subject of entomology or insect life. Something should be known concerning the insect pests, their habits, life history, characteristics, and methods of control. The same may be said of the science of botany or the study of plants. The agricultural course at the state colleges today is rich in the study of plants, their habits of growth, methods of identification, and plant breeding. These are things

Make Your Butter Pay More Profit

Quality butter brings top prices. But it must be a quality beyond the cow and the churn. In what condition does your butter reach your customer? *That's the secret of butter profits.*

For an amount too small to consider you can wrap your butter in

Paterson Pioneer Parchment Paper

stamped with your own brand, which to your customer becomes an identifying mark of fresh butter, free from dirt, impurities and bad odors—wholesome, fine flavored butter which people gladly pay more for. Try it.

which the farmer must appreciate in order to best maintain and improve his best varieties of grain and other crops.

Other sciences such as chemistry, physics, etc., relate more or less directly to the farmer's job. And while a knowledge of these is not absolutely essential, yet many times one of these scientific facts, stored away in the farmer's brain cells, may be called forth to explain a perplexing problem.

What the Farmer should be Capable of Doing

It is not sufficient that this great fund of information be held ready for instant use in the farmer's mind. He might be in possession of all the practical and scientific facts mentioned, yet without the happy combination of an ability to do things. He would be doomed to failure within a reasonable length of time. On a farm of any considerable size, the operator is the responsible person and all hands look to him to keep the work moving smoothly, with no confusion and without a break. To do this successfully the farmer must be a close observer and student of his machinery. He should have a complete kit of tools and repairs at hand so that, when a piece of machinery breaks, he can quickly make the necessary repair and avoid a big loss of time.

The working ability and condition of the horses usually depend upon the degree of watchful care and supervision given to them by the owner himself. This important part of successful farming must not be left with the hired help; if it is, it often happens, at a busy time perhaps, that a horse must be taken out of a team on account of a sore neck, sore shoulder, sweeney, or the rough-pin.

Managing the milk cows for profit the hogs, sheep, and poultry are all very important in the curriculum of successful farming. Any one of these branches is sufficiently complicated that it may be made a study in itself.

The Farmer's Personality

I have often thought that if the farmer were as careful of his personal appearance and personality as the average business man in the city, how wonderfully it would change the common conception of the farmer. It always seems that city men in business are continually striving to make their personality stand out as a shining light before the world. It is largely their capital, their stock in trade, and they make the most of it.

In a farm journal some time ago I was interested in reading a controversy between a man and a woman contributor. The question was concerning the personal appearance of the farmer. I believe the woman made the assertion that a farmer should be very careful to appear in public clean and neat at all times when possible. The man contributor took up the defense and claimed that many successful farmers were too busy to consider their clothes. He said at times it became necessary for the farmer to rush into town, coming direct from the cow barn or hog lot and for these reasons he would look pretty rough, but at the same time he might be a successful hog breeder or dairyman. The woman stoutly maintained that the farmer should wash and take a few minutes necessary to put on clean clothes. I should hate to judge who was right in this dispute but I imagine practically every one except the farmer himself would agree with the woman's views on the subject. There is one thing certain, if we ever hope to dignify the farmer's job we cannot do so by wearing dirty, shabby clothes on our trips to town or any gathering where we come before the public.

Yield of Each Cow Figured for You

By the *CP* Pail Balancing Scale

Has two indicators. Weighs the milk in the pail. Eliminates errors. First hang the empty pail on the scale. Turn the thumbscrew in the center of the dial, which moves the red indicator until it is at the 0 mark, thus balancing the weight of the pail. Then add the milk or cream and the result shown by the red indicator gives the net weight of the milk or cream, and at the same time the black indicator gives the gross weight of pail and milk.

The capacity of these scales is 30, 60 and 120 pounds, according to size, in pounds and tenths of pounds. With each scale we furnish special blanks that will contain the record for two milkings a day for one week for 14 cows.

The scale can also be used for all weighing purposes.

Price each, 30 lbs. capacity by 1-20 lb. $4.85, 60-lb. $5.65, 120-lb. $8.85. Extra records per dozen, 15c.

Price each Postpaid **4.85**

Association Notes

Westmoreland County, Pennsylvania:—Five new silos have been built and filled by members of the association. In September the condensery paid $3.05 per cwt. for 3.5% milk. Milk retails for 16c per quart and butter for 70c per pound. Feed prices are: Union grains, $80 per ton; Larro, $76.60; cottonseed meal, $63 in carload lots; oil meal, $64 in carload lots.

Western Allegan County, Michigan:—September market milk testing 3.5% sold for $3.30 per cwt. and 4c per point above this test and 6c per point above 4%. Butter retails for 62c per pound. Hay is rated at $28 per ton; cottonseed meal, $80; oats, 65c per bushel; corn, $1 per bushel.

McCracken County, Kentucky:—Eight unprofitable cows have been sold to the butcher since the founding of the association. Two pure-bred Jersey bull calves have been placed with members. Through the assistance of the county agent, a boys' and girls' calf club has been organized. Four good pure-bred Jersey heifers have been placed in the county and seven or eight Holstein heifers are to be brought in in the near future. The dairymen and cattle feeders are cooperating in the buying of cottonseed meal. In September, market milk testing 3.6% sold for $4.50 per cwt. and 6c per point above. The creamery paid 57c per pound for fat. Milk retails for 18c per quart and butter for 60c and 65c per pound. Feed prices are: Bran, $55—$60 per ton; cottonseed meal, $60—$80; gluten feed, $70.

Webster County, Missouri:—In August, the creamery paid 53c per pound for fat. Bran sold for $52 per ton; cottonseed meal, $73; pasture, $2 per head. In September fat sold for 55c per pound at the creamery, and feeds are rated as follows: bran, $50 per ton; cottonseed meal, $70; pasture, $2 per head.

St. Louis County, Missouri:—A Hereford bull and a scrub Guernsey have been replaced with registered Holstein bulls. This association is now 100 per cent in pure-bred sires. Ten poor producers were sold out of the herd of Bellefontaine Farms with the result that the average milk production per cow was increased from 695 lbs. to 965.6 lbs., average fat production from 22.74 lbs. to 33.32 lbs., and the average profit from $11.94 to $23.61. La Salle Institution sold 20 grade Holsteins for an average of $240 each. September market milk testing 3.25% sold for 30c to 42c per gallon. Milk retails for 16c and 18c per quart and butter for 80c per pound. Feed prices are: bran, $40 per ton; shorts, $55; cottonseed meal, $55; linseed meal, $60; alfalfa hay, $36; clover, $30; clover and timothy mixed, $25 to $30.

Douglas County, Colorado:—Nine "boarder" cows have been sold and seven high grades purchased during September. Another tile silo has been erected. The creamery paid 80c per pound for fat. Milk retails for 10c per quart. Local feed prices are: alfalfa, $16—$20 per ton; silage, $8—$10; bran, $2.30—$3.30 per cwt.; cottonseed meal, $3.75—$5; linseed meal, $4.75—$5.50; oats, $3.20—$4; barley, $4; corn chop, $2.40—$3.50.

Platte, Boulder & St. Vrain Valleys, Colorado:—The condensery paid 75c per pound for fat in September. Alfalfa is rated at $14—$17 per ton; dry beet pulp, $1.75 per cwt.; bran, $3; cottonseed meal, $4.25; linseed meal, $4.75; oats, $3; barley, $3; corn chop, $3.25—$3.50.

Dairying Thirty Years Ago

For nearly twenty years we have counseled the dairy farmers against letting their cows run out to pasture when cold rain storms occur. It is one of the most wasteful things in the world to do.

The farmer keeps these cows for the milk they give, yet he will expose them to a beating cold rain storm when he knows that such a practice will shrink their milk supply greatly. We will wager that of all the cold rain storms which have swept Wisconsin the past three weeks, not one dairyman in ten kept his cows in the stable during the storms. Yet they would have made money if they had done so. The daily milk record at the Fort Atkinson creamery has told its patrons the theory of shrinkage from this cause with unerring accuracy, and so will every creamery. Yet still the foolish practice goes on. When will farmers learn how to handle a cow? When will they learn the fact that the giving of milk is a mother-function and that warmth and comfort are essentially necessary to a full and profitable exercise of this function?

They are paying a fearful tax every year to their carelessness and indifference and, with all it has cost them, they do not seem to learn and practice any better yet. No intelligent dairyman will let his cows be exposed to a cold rain. Set that down as an axiomatic truth.

Siloing Sorghum Leaves

Mr. C. S. Jobes, president of the Attica, Kansas, bank, writes us there

are sugar works in his place and that he is trying the experiment of siloing the leaves stripped from the stalks of sorghum, of which he has plenty at no cost. His immediate anxiety was to know if a covering made of "bagasse", which is the chips of the sorghum stalks after the sugar has been abstracted, would answer the purpose. We have written him we know of no reason why that will not make the best kind of a covering, certainly as good, if not better, than marsh hay or old straw, cut. By using it he will get pressure and air-tightness by the one act of putting it on.

He has a pit that will hold some 240 tons of silage. Of course the siloing of sorghum leaves is an experiment, but we do not see why they cannot be as successfully used for the purpose as clover or beet leaves and shall expect to hear Mr. Jobes has secured a large amount of cattle food at a slight expense. If we are to enter on the production of sugar from sorghum extensively, the by-product of cattle food may become a source of much revenue.

Kelly Caterpillars are their own best advertisement

The fleet-owner who begins by trying out Caterpillars on one truck almost invariably ends by equipping his entire fleet with them.

The reason is not hard to find. Caterpillars are the most economical truck tires made.

Their massive volume of rubber gives them amazing resilience. Their patented construction gives them traction power which no other truck tires possess.

They save power, gas and oil. They protect the truck from road shocks, cut repair bills to a minimum and lengthen the life of the truck.

In addition to all this they give an excess mileage which alone would be sufficient to convince any truck owner of their economy.

The Toronto Globe lifts the veil in regard to how "compound lard" is made, by which it will be seen it continues a swindle that is commenced to make oleomargarine. It says that after the oleo oil is pressed out of beef fat, the contents of the filter bags are mixed with cottonseed oil and then from 25 to 30 per cent of lard is added to the beef and cottonseed compound, and the result is the "compound lard" of commerce, of which 320,000,000 lbs. were made in a year. Is it any wonder the makers squirm when they have to brand their stuff, stating the ingredients of which it is made? What kind of statesmen is it who say there shall be no police officials to execute a law to prevent such swindling of the people?

A short time since the cow was sad; she could scarce raise her head, begad. Her hoofs were sore, her tail was limp; her mane and bangs had lost their crimp, and miles she trudged from grass to drink, with scarcely strength enough to wink. The owner, too, looked blue and glum, and cussed the cattle business some. But since the rains the grass is tall—the cow can raise her head and bawl; her side is sleek, no bones protrude, she prances like a Deming dude. Her tail is sleek, her eyes are bright, she snorts and dares the crowd to fight. Her owner, too, digs up the chink and asks the boys to take a drink. God bless the rain, the gentle rain, it makes a man feel young again. He feels like tossing up his hat and howling like a Democrat.—Colorado Clipper.

New England Holstein Organization Campaign

A series of forty-five organization meetings were begun in New England October 20th and will continue to November 20th, under the direction of of the New England Holstein-Friesian Breeders' Club. In this campaign six state associations are co-operating and are being assisted by the extension service of the Holstein-Friesian Association of America. It is expected that through the increased membership which will result from this campaign, sufficient funds can be raised to employ a field secretary for New England.

The first meeting was in Windham County, Vermont, the home of the National Association. Among the speakers in the campaign are President D. D. Aitken, Secretary F. L. Houghton, R. C. Pollock, and Wm. M. Rider. A complete schedule of the meetings to be held can be secured by addressing Wm. M. Rider, Brattleboro, Vermont.

Kentucky and Indiana Dairymen Organize

HOARD'S DAIRYMAN:—Dairymen of Kentucky and Southern Indiana have formed an organization known as the Kentucky and Indiana Milk Producers' Association. It is composed of small producers who do not operate a distributing agency in the city, but sell their product to the big distributors. The association has been incorporated under the laws of Kentucky and is capitalized at $300,000. W. C. Callahan is the secretary, with headquarters in the Inter-Southern Building, Louisville.

The organization comes as a result of what the small producers believe is an effort to hold them to an unfair portion of the profit on the part of the big distributors. They contend that the cost of producing milk has gradually risen without an accompanied increase in returns to them. The primary object of the organization is to form a huge distributing plant in the city of Louisville, which will belong to the entire body of small producers. Each man will bring his products to this depot and distribution to consumers in the city will be made on the unit plan. In this way the promoters of the association expect to cut delivery costs to such an extent that they will be able to sell milk to the consumer for less than the larger distributors, of whom there are four or five in the city and who necessarily duplicate territory as far as delivery is concerned.

A meeting was held at the Seelbach Hotel, Louisville's principal hostelry, about the first of October. Invitations had been sent out to farmer-dairymen in all parts of Kentucky and Southern Indiana. The response was generous and there were several hundred in attendance. Mr. Callahan, the active head of the organization, is very enthusiastic about the prospects for advancing the interest of the small producers of dairy products.

Kentucky. GEO. T. HOLMES.

Each proved good cow in the herd means a profit; but the more poor cows there are, the greater the loss.

Destroy and burn weed seed this fall and it won't get a chance to grow next spring.
